60th year—$45 per year, $1.00 per copy

U.S. model count moves up to 313; highest since 1975

By John K. Teahen Jr.
Managing Editor

Gains by the Big Three—especially by General Motors—have pushed the number of passenger-car models offered by domestic makers to an 11-year high, an Automotive News analysis discloses.

As the 1986 season began, the manufacturers listed 313 models on their charts. The total hasn't been that high since 1975 when 325 were offered. The count was 295 at the end of the 1985 model year.

The current rundown looks like this: General Motors, 153 models; Ford Motor Co., 78; Chrysler Corp., 54; American Motors-Renault, 17; Honda, 5; Nissan, 3, and Volkswagen, 3.

At the end of the 1985 model year, it was: GM, 141; Ford Motor, 74; Chrysler Corp., 52; AMC-Renault, 17; Honda, 5; Nissan 3, and VW, 3.

Only the U.S.-built models of the four overseas-based makers are included in the total. They are Renault Alliance/Encore, Honda Accord, VW Golf/GTI and Nissan Sentra two-door notchback.

Many of the current complement of 313 models can't be purchased as yet. Perhaps the most notable of those are Ford Taurus and Mercury Sable, which will debut Dec. 26. The Corvette convertible will arrive next spring. Buick has three sporty Skyhawks waiting in the wings, and Chevrolet has a fancy Monte Carlo on tap.

The formal intro date is Nov. 14 for Buick Riviera and LeSabre, Oldsmobile Delta 88 and Toronado and Cadillac Eldorado and Seville. They're all included in the model count.

One line that's not included is Ford Division's EXP. It's due early in 1986, but Ford hasn't said how many models there will be. There were three last year. There probably will be other added starters as the 1986 model year rolls along.

Taurus and Sable are the only new nameplates for 1986. Missing from last year's list are the

breaking news

Ford looks to France

DETROIT.—Ford's proposed $24,000 mid-engine sports car planned for the 1989 time frame is likely to be assembled in France by Usines Chausson, a coachmaker co-owned by Peugeot and Renault, according to sources familiar with the program. While Ford hasn't yet confirmed it will go ahead with the new car, executives

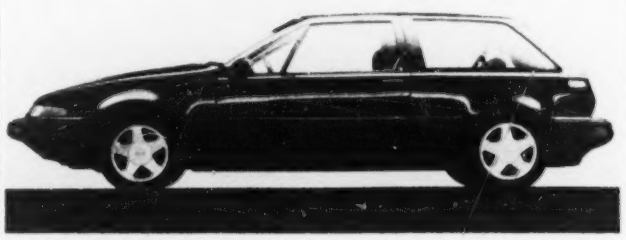
It's different; it's Volvo



480 ES for U.S. in 1987

Volvo Car B.V., the Dutch arm of Sweden's Volvo Corp., will send the 480 ES to the U.S. market in the spring of 1987. It is unlike any previous Volvo. The 480 ES has front-wheel drive—a first for a Volvo production car—and its sleek, curved styling is in contrast to the angular 700 Series cars made by Volvo Corp. Story, other pictures, on Page 27.

GM leads suitor list, but BMW stands aloof

By Edward Lapham and Michelle Krebs
Automotive News Staff

German prestige auto maker BMW is a very popular item on the international automotive dance card these days.

The Munich-based company has been wooed by several auto makers, including Ford, Chrysler and General Motors, all seeking to improve their corporate gene pools with some sort of liaison.

Cimarron may be built in Europe. Story on Page 8.

Talk of a possible GM-BMW deal first began to circulate last spring and resurfaced at the Frankfurt Motor Show.

The trade paper Advertising Age reported that GM is "shopping for a European luxury auto maker that could become a seventh domestic car division."

Advertising Age said consideration of that new approach was made possible by last year's corporate reorganization.

A BMW official in Munich last week confirmed that BMW has had talks with "several" auto makers, but refused "to characterize the nature" of the discussions.

"We did not initiate them," the company said.

The official also said that as far as BMW knew, none of the U.S. makers had contacted the Quandt family group about a possible stock acquisition.

The Quandt family owns more than 60 percent of the outstanding BMW stock.

Of the American suitors, GM seems to have been the most serious, according to Automotive News sources.

However, the best information now available suggests BMW will remain independent and unattached.

BMW Chairman Eberhard von Kuenheim is known to have visited GM on a trip to the U.S. last spring.

However, on his most recent trip

Steering and engines steal Tokyo show

By Francis J. Gawronski
Tokyo Bureau Chief

TOKYO.—Top attractions at the 26th International Tokyo Motor Show which opened here last week were mid-engined and four-wheel-drive vehicles—both futuristic and current models—and a prestige car that will go on sale in Japan and South Korea next year.

The biennial show attracted exhibits from 260 manufacturers of vehicles and components from 13 countries plus vehicles commissioned by two governments (U.S. and Canada). On exhibit are 1,032 cars, trucks, buses and motorcycles, 200 of which are from outside Japan including 39 from the U.S.

Japanese firms showed five mid-engined models including prototypes. Eight 4WD vehicles were exhibited.

Mitsubishi Motors Corp.'s prestige car, Debonair, completely restyled for the first time in 22 years, was unveiled. Scheduled to come to market next year, Debonair is a joint effort with the South Korean auto maker Hyundai Motor Co.

MMC will begin producing the car next summer. Castings, forgings and body will be produced by Hyundai at a rate of 1,000 units a month for MMC. Hyundai also will produce the car under its brand name with an initial target of 20,000 units a year. Hyundai production will coincide with that of MMC.

Debonair will be the first Japanese car in its class with front-wheel drive. It also features a new V-6 in two- and three-liter versions. The restyled exterior is marked by a long nose accentuated by a large air dam.

Drawing attention at the Toyota exhibit was the prototype FXV, a 4WD, 4-wheel-steering, mid-engined car with twin-cam four-cylinder, turbocharged two-liter power plant capable of 230 HP. It is said to be the first Japanese

Eight divisions construct visionary car

Here's the Ford in Ford's future

By Louise Kertesz
Detroit Reporter

The Ford that may be in Ford's future is being distilled from the projections of eight Diversified Products Operations divisions.

In what Ford Motor Co. called "a first-ever team exercise," participants from widely different areas of the company collectively forecast the Ford T-2008 model.

The car is so named because when something like it appears in 23 years, it will mark the 100th anniversary of the Model T.

The metamorphosed flivver was recently described to the press in a slide presentation followed by a panel discussion at Ford's Research and Engineering Center in Dearborn.

T-2008 is not a Saturn, a specific vehicle for which General Motors has already acquired a production site. Nor is T-2008 the proposed product of an Alpha project, Ford's answer to Saturn. Actual Saturn and Alpha cars will take to the roads within 10 years.

Nor is T-2008 another experimental car like Ford's Probe V or Buick's Wildcat. The latter is already a driveable vehicle, and a driveable version of the Probe V, a model of which already exists, is due next summer.

The T-2008's existence is still, shall we say, spiritual. The car will gradually materialize, given the direction of the 60 or so developing technologies it comprises.

Some of the car's features will actually appear in Ford vehicles even before the year 2008, according to the company.

The probable shape of this car of the 21st Century emerged from brainstorming sessions among engineers from Ford Aerospace & Communications Corp.; Electrical and Electronics Division; Rouge Steel Co.; Casting Division; Tractor Operations; Glass Division; Climate Control Division; Plastics, Paint and Vinyl Division, and Ford's Design Center.

According to Ford, those teams prepared and deliberated over monographs in an attempt "to project a vision of personal transportation 23 years from now."

At least one industry observer found such inter-divisional collaboration on the development of a vehicle as interesting as the T-2008 itself. His rhetorical question was, "Can you see this happening at GM?"

Harold A. Poling, Ford president, boasted: "Many of the people working on this project had never even met before. Now, they're exchanging ideas on a regular basis."

The project "has provided a foundation for real teamwork and cooperative future planning," said Philip E. Benton Jr., executive vice president—Diversified Products Operations.

Such planning, which presupposes highly automated manufacturing, stretches beyond the company's usual 10-year range, said Robert C. Graham, vice president—automotive components.

"It's a very different way to run our business," he told reporters

Please turn to Page 48, Col. 1

Ford's T-2008

DPO's 21st-century car

Eight divisions of Ford's Diversified Products Operations collaborated to project a vision of a Ford automobile of the year 2008—the 100th anniversary of the Model T. The result, the T-2008, is a modular vehicle with steel frame and sleek plastic skin and all-glass top above the belt line. The car is loaded with sophisticated electronics such as a satellite-controlled guidance system.

Big Four earn $1.1 billion, second-best third quarter ever

Makers report near-record profits

By Michelle Krebs
Financial Editor

The Big Four auto makers collectively enjoyed their second-best third-quarter profits while sales for the quarter set a record.

The Big Four earned $1.127 billion in the third quarter, 6 percent higher than $1.060 billion in the same quarter a year ago. The record for the quarter was set in 1983 when the four companies earned $1.161 billion.

Sales for the quarter hit $39.6 billion, up 12 percent from $35.5 billion in 1984, which was the previous record.

The third quarter of 1985 saw some of the most aggressive sales incentives in recent history. Domestic auto makers offered 7.5-percent and 7.7-percent financing following a strike by auto haulers.

General Motors reported third-quarter earnings of $516.5 million, up 24 percent from $416.8 million in the same quarter a year earlier. However, GM also reported an operating loss of $20.9 million.

Sales for GM amounted to $22.5 billion, up 21 percent from $18.5 billion. The quarterly sales set a record, surpassing the previous high of $25.1 billion in the second quarter of this year.

Ford Motor Co.'s quarterly earnings were $313.1 million, down 18 percent from $379.7 million a year ago. Operating income, however, dropped 57 percent to $155.2 million from $362.7 million in 1984.

Ford sales for the quarter were $11.6 billion, down 1.8 percent from $11.8 billion in 1984's third quarter.

Chrysler Corp. set a series of third-quarter records. Profits amounted to $316.2 million, surpassing the previous peak of $261.6 million in the third quarter of 1984. Chrysler's pre-tax income also set a third-quarter record of $451.8 million.

Quarterly sales were a $4.5 billion. The previous record of $4.1 billion was set in 1984.

American Motors reported a $19.1-million loss in the third quarter. That compares with a profit of $2.5 million a year ago, which included $2.4 million in tax credits.

Sales for American Motors virtually matched the $1.0 billion for the same period a year ago.

For the first nine months this year, the Big Four earned $5.8 billion, down 23 percent from 1984's record-breaking $7.6 billion. However, the quarter still is the second-best nine-month period on the books.

Sales for the first nine months were $129.2 billion, up 8 percent from the previous record of $119.4 billion set in the first nine months of 1984.

For the first nine months, GM earned $2.7 billion, down 25 percent from 1984's record $3.6 billion.

GM sales for the first nine months were a record $71.7 billion, up 14 percent from $63.0 billion in 1984's first nine months.

For the first nine months this year, Ford's profits were $1.8 billion, down 18 percent from $2.2 billion last year. Operating profit was $2.2 billion for the year to date, down 14 percent from $2.6 billion.

1986 Cadillac Seville

Elegante is the word

The Seville from Cadillac, shown here in the Elegante version, has been downsized and lightened in its complete redesign for the 1986 model year. Produced at General Motors' new Detroit-Hamtramck Assembly Center, Eldorado currently is scheduled to go on sale Nov. 14. Story and another picture are on Page 13.

Cadillac goal: 100,000 for Eldorado, Seville

By Michelle Krebs
Financial Editor

It was just a month ago that Cadillac introduced all but two of its models, but already the division has boosted its sales goal for the 1986 model year.

Cadillac officials said they expect to sell 320,000 cars in the 1986 model year, about 5,000 more than the original projection. Cadillac's 1985 model-year sales were 310,942.

At the introduction of Cadillac's redesigned Seville and Eldorado models, General Manager John O. Grettenberger said the division expects to sell more than 100,000 of the new models. He estimated Seville sales at 41,500; Eldorado, at 62,500. The 1985 model-year sales were 32,986 for Seville and 66,863 for Eldorado.

• Seville and Eldorado arrive in showrooms Nov. 14. Prices will be announced three days earlier.

Grettenberger said the Eldorado is aimed at traditional Eldorado buyers, despite the dramatic styling change. The most noticeable aspect of the new Eldorado is the drastically shortened back end.

In addition, the Eldorado will be aimed at potential luxury import buyers and generally younger buyers. The division expects 35 percent of buyers to be under age 40 compared with 20 percent now. Grettenberger said preliminary studies further show the Eldorado has greater appeal to women than previous Eldorado models.

The Seville, a model exclusive to Cadillac, is expected to appeal to traditional Seville buyers. In addition, the division believes it can win back former Seville buyers who turned away from the car when it was restyled in 1980 with the slanted, Bentley-style back end. The slanted back end has been squared off for 1986.

Grettenberger said the luxury-car market has been strong and expanding rapidly at the "ultra-luxury" end and the entry level. However, it has become more competitive.

He said the luxury market amounts to one-million-plus units annually, of which Cadillac takes about 30 percent and the imports close to 20 percent.

Annual improvement factor, job classifications could prove sticky issues

Chrysler contract doesn't solve all

By Mary Connelly
Detroit Reporter

Two pressure points appear to exist in the new three-year labor agreement between the UAW and Chrysler Corp.

1. The contract calls for the reintroduction, in the third year, of an annual 3 percent across-the-board base pay hike, the first negotiated in a major auto pact since 1979. The practice of paying a so-called annual improvement factor (AIF) was abandoned by the industry in recent years in favor of scaled increases and lump-sum payments to reduce labor costs.

General Motors and Ford Motor Co. are likely to face a demand for a 3-percent across-the-board hike when their contracts with the UAW expire in 1987.

UAW President Owen Bieber said the Chrysler contract is "a clear signal to the entire world that 3 percent AIFs are back, are attainable." However, GM Chairman Roger B. Smith said in an interview last week that he hoped the days of the AIF were "behind us."

2. The accord calls for pilot programs at four as yet unspecified Chrysler plants to study possible reduction of hundreds of job classifications, a move the corporation maintains will boost productivity.

That could spark a tug-of-war between the UAW and Chrysler. The union is wary of cutting classifications but is also seeking to curtail outsourcing which is the practice of using outside suppliers. Chrysler has warned that if productivity is not increased, jobs will be lost due to outsourcing.

Chrysler's U.S. plants reopened last week following a 12-day strike by 70,000 UAW members. Canadian plants reopened Oct. 21 after a five-day strike by 10,400 workers. The strikes cost the company $150 million to $200 million, according to Chrysler Chairman Lee Iacocca.

The accord was ratified by 87 percent of the UAW members in the U.S. who voted. The UAW did not release the vote totals, but described the turnout as "high."

The Chrysler contract calls for a 3 percent across-the-board increase to be paid in the third year. Agreeing to the reinstate the traditional raise was the price Chrysler paid for a three-year contract that does not expire simultaneously with those at GM and Ford, Iacocca said last week.

The UAW agreed to abandon its demand for a two-year agreement because it can now enter the 1987 GM and Ford negotiations with the Chrysler AIF in hand.

The three-year contract will cost Chrysler an estimated $1

Lemaire gives up post as Peugeot U.S. chief

By John A. Russell
New York Staff Writer

NEW YORK.—Pierre Lemaire, 59, president of Peugeot Motors of America and a central figure in a controversy between PMA and its dealers, announced his early retirement effective next June 30.

In a memo to employes, Lemaire said Pascal Hanault, now assistant director for parts of Automobiles Peugeot in France, was appointed executive vice president and chief operating officer of PMA effective last Friday (Nov. 1).

The announcement, rumored but unconfirmed for several weeks, may be the final chapter in the battle between PMA and its dealers including the Northeast Peugeot Dealers Assn., which was in the forefront of a campaign to force the removal of Lemaire and James Fitzhenry, PMA general sales manager.

The association, in a telegram to Automobiles Peugeot, had demanded the resignations of both executives.

Lemaire told employes his retirement is effective June 30, 1986. While he will continue in his role as president of PMA until that time, Hanault will run the company.

However, there was no public statement on his retirement.

Still unanswered last week was the future of Fitzhenry. While a Peugeot spokesman said Fitzhenry would continue in his position, other sources have indicated that Fitzhenry is leaving the company.

Ben Chamis, president of the Northeast Peugeot Dealers Assn., termed Lemaire's retirement a positive move. He added that the dealers intend to "afford him (Hanault) a big welcome and sup-

2nd Honda plant reported for U.S.; Honda won't talk

TOKYO.—Honda Motor Co. declined to comment on reports that it is going to build a second auto plant in the U.S.

According to reports here, the Japanese auto maker has started a feasibility study for a second U.S. plant. Honda would not comment on that, either.

Reports indicated the auto maker plans to start operating the plant as early as 1989 with one line and an annual capacity of 120,000 cars in the 1,600-cc class.

The capacity, according to reports, would be increased in the future to bring Honda's annual capacity in the U.S. to 450,000 units at the new plant and the current facility in Marysville, O.

The decision to build another plant, according to the reports, stemmed from the growing demand for Honda cars in the U.S. as well as Honda's plan to add 600 sales outlets to its dealer network by 1990.

Japan won't hike U.S. car prices despite yen rise

TOKYO.—Japanese auto makers have decided not to raise prices on cars marketed in the U.S. before the end of the year, according to Nihon Keizai, a leading financial publication here.

According to the publication, despite large foreign exchange losses expected from the yen's sharp rise since September, the car makers decided not to raise prices and to maintain the price competitiveness required to get their share of the U.S. market.

Another factor in the decision, the publication said, was that the auto firms raised prices when they began marketing new models in October. Toyota raised prices an average of 1.7 percent; Nissan, one percent, and Honda, 4.3 percent.

Toyota and Nissan estimate annual exchange losses of $203 million and $141.73 million, respectively, when the yen rises by 10 against the dollar.

Taillamps a problem at GM's newest plant

DETROIT.—Production at General Motors newest plant here ran into problems when it was discovered that metal brackets holding taillamps in place could not withstand the heat of the paint ovens.

GM said taillamps on "several hundred" cars are being replaced. The Detroit-Hamtramck plant began production in September. It assembles the Buick Riviera, Oldsmobile Tornado and Cadillac Eldorado and Seville.

Laws, late models, incentives bring problems for auctions

By Richard Johnson
Detroit Reporter

A combination of tougher odometer law enforcement, a lush supply of late-model vehicles and recent new-car financing incentives have combined to depress prices and drop selling percentages in the wholesale used-car business.

Dealers are reportedly reluctant to stock used 1985 models, fearing that another round of manufacturer incentives will cripple the business. In particular, some auction firms report a surprising bottoming out for late-model "heavies," the standard and luxury-car models that a year ago were booming in the used-car market.

But despite a so-so year in the trade, overall volume is still growing and auction representatives contacted by Automotive News are upbeat about 1986.

Many regard the price plunge as a natural realigning of a market that was inflated by the scarcity of clean, late-model units during and immediately after the recession period.

"It's been a pretty good year, although a tougher year because buyers are more choosy," said Bernard Hart, executive secretary of the National Auto Auction Assn., Lincoln, Neb.

"The (sales) percentages haven't been as good, but the volume is as good if not better than last year. We went through a price adjustment this year because of supply and demand. When new cars picked up, it put more used cars on the market."

Hart, whose association has more than 150 members, projected national auction sales volume at better than three million units in 1985 and predicted "a good year" in 1986. He said association members sounded a generally positive note at the group's recent convention in Denver.

"It's been a medium year, nothing that's a killer, but not too bad," said Dan Hackett, general manager of Denver Auto Auction, Englewood, Colo. "Anything good and clean is selling quite well. The late-model market is off because of the new-car financing, but it has picked up 10-15 percent in the last couple of weeks."

"It's been an average year, nothing special," said Greg Kobel, vice president of Greater Chicago Auto Auction. "It's a combination of the market itself and the odometer situation."

He said late models are off because of the spate of manufacturer incentives. But Kobel said the firm's other auction, Auctionway Sales in Crestwood, Ill., is doing very well with older, higher-mileage and damaged units.

Kobel also said he has seen an upturn in the late-model market during the past two weeks.

"It's been a good year, but we've been off about 10 percent the last 30 days because of incentives," said Jim McLaughlin, owner of Fort Worth Auto Auction. "We've come back a little in the last two weeks."

"As soon as the financing went away, we felt the market change considerably," said Mort Gallup, owner of Hatfield Auto Auction, Hatfield, Pa. "In general, business has been good and percentage of sales has been exceptional, with the exception of the recent few weeks (during new-car incentives). Now, dealers are wary of stocking '85s beyond what they can sell in the immediate future. Everybody expects the other shoe to drop."

"There seems to be a lack of confidence in pricing late-model used cars mainly due to the financing incentives," said Tony Moorby, vice president—sales and marketing at Anglo American Auto Auctions, Inc., which operates 12 auctions around the country. "The lack of confidence usually shows itself in lower prices. There has been a definite step back."

McLaughlin said his volume is up 10 percent in 1985, but the marketplace has caused prices to fall. In real dollars, Gallup said, dealers are buying 1985 cars for less than they paid for 1984s.

"It seems like prices kind of tapered off to what they should be," said Hackett. "For a while, you could take the NADA book and throw it out."

The Automotive News survey of auction prices indicated an average used-car auction sale price of $4,790 in October, down from $4,883 in September, $5,172 in August and $4,984 in October, 1984.

According to some accounts, the hardest hit have been big, late-model cars that pre-date the latest round of downsizing, such as the old General Motors C-body models that were replaced in the spring of 1984, but were sold

Rental car for those on a big budget

Budget Rent-A-Car outlets in (where else?) Beverly Hills and Marina del Rey, Calif., have added the ultimate daily rental cars to their fleets: Ferrari Testarossas, available to properly insured drivers over the age of 21 at $600 per day plus $1 per mile.

First time since 1976

Chrysler beats Ford on profits

By Michelle Krebs
Financial Editor

Chrysler Corp. surpassed Ford Motor Co. in third-quarter earnings for the first time in nearly a decade.

It was the the first time since the third quarter of 1976 that Chrysler has earned more than Ford, although during the recession Ford suffered some greater losses than Chrysler. In the third quarter of 1976, Chrysler had $76 million in profits compared with Ford's $42 million.

Chrysler, for the 1985 third quarter, had record earnings of $316.2 million, or $2.75 per share, surpassing the previous third-quarter peak of $261.6 million, or $1.88 per share, set in 1984.

"What is significant is that we earned almost all of that money in selling cars and trucks," Chrysler Chairman Lee Iacocca said. "I got a little scared last week when GM made over half a billion but lost money on the auto business. I sure hope that's not a sign of the times.

"We've been doing a little bit of our own diversifying, but we have to live or die on cars and trucks," he added.

While Chrysler set a record, Ford earned $3 million less than Chrysler with quarterly earnings declining 18 percent to $313.1 million. General Motors earned $516.5 million, up 24 percent, but GM reported an operating loss. Financing incentives and new-model costs were blamed.

Chrysler paid taxes in this year's third quarter but not in the third quarter of 1984. The company earned $451.8 million in pretax profits this year.

Quarterly sales also set a record of $4.5 billion, compared with the previous record of $4.1 billion in 1984.

Iacocca said the 7.5-percent financing incentives following the auto haulers' strike cost Chrysler about $150 million.

"Our incentives did what they were supposed to do—sell a lot of cars and trucks. And as expensive as they were, they generated enough additional volume to increase our profits," Iacocca said.

However, Iacocca said, the string of eight consecutive quarterly records may end in the fourth quarter, which included a five-day strike by Canadian workers and a 12-day strike by U.S. workers.

Iacocca said the strikes cost Chrysler between $150 million and $200 million, and as much as half may be made up before the end of this year or in the first quarter of 1986.

In addition, Iacocca called the new contracts with the UAW expensive ones which will absorb substantial amounts of Chrysler's cash in the fourth quarter with

UAW seeks NLRB vote at Honda Ohio plants

By Mary Connelly
Detroit Reporter

The UAW has filed for a union recognition election at Honda of America Mfg. Co. plants in Marysville, O.

An election could be scheduled within 30 to 45 days, according to the UAW. Union recognition would require a majority vote by the 2,300 to 2,500 production and maintenance workers.

Honda last week rejected a UAW recognition request delivered by the union Oct. 25. The union last Wednesday (Oct. 30) filed with the National Labor Relations Board for an election.

The company said it polled about 2,600 workers on three shifts last week and that 73.2 percent of those polled "advised the company to reject the union request and to let the union petition for an election if desired."

"Based on this consultation with our associates, we have said no to the UAW," said Shige Yoshida, executive vice president of the company.

Under federal law, the union can petition to hold a secret-ballot election if it can show that 30 percent or more of the workers in a plant have signed union cards. A majority vote is required in the recognition election to name the union as the workers' exclusive bargaining agent.

Joseph Tomasi, director of UAW Region 2B in Toledo, said wage and fringe benefits at Honda lag behind those paid unionized auto workers at General Motors, Ford Motor Co. and Chrysler Corp. He also cited health and safety issues and supervisor harassment as reasons to organize the plants.

The three plants include automobile and motorcycle assembly plants and an associated motorcycle engine plant in Anna, O. The Marysville plant produces the Honda Accord and will begin producing the Civic in 1986.

The UAW has been trying to organize Honda since 1981.

Asked if the UAW would seek a traditional or innovative contract such as the GM-UAW Saturn agreement if the union wins the election, Tomasi said, "That's difficult to answer right now. I'm not going to say now what kind of contract we'll be after."

Toyota said to favor site east of Toronto

By Richard Johnson
Detroit Reporter

Speculation is mounting that Toyota Motor Corp. has decided on a location about 90 miles east of Toronto for its planned Canadian assembly plant.

Indications are that an announcement confirming the new Canadian site will come within two weeks.

Reports abound north of the border that Toyota will build its $300-million (Canadian) facility in the area of Trenton and Belleville, situated roughly midway between Toronto and the national capital of Ottawa. The site is on the Bay of Quinte along the northern shore of Lake Ontario.

Toyota announced last summer that it will construct two new assembly plants in North America, a U.S. plant that will produce 200,000 passenger cars annually and a Canadian facility with annual capacity of 50,000 units. Both plants are expected to begin production in late 1988.

In the U.S., Toyota is reportedly eying sites in Kansas City, Kans., and Lebanon, Tenn. The Tennessee site is in the same region as General Motors' proposed Saturn facility and Nissan Motor Co.'s car and truck plant.

In Canada, Toyota has reportedly considered sites in several provinces, most notably Ontario, Quebec and British Columbia. But the Japanese auto maker may have settled on Ontario, in part because of accessibility to Japanese component outlets springing up to serve new and planned Japanese production sites in the U.S. Midwest.

Chrysler offers 8.6 on Lancer, LeBaron GTS

Chrysler Corp. last week jumped into the current round of financing incentives with an 8.6 annual-percentage-rate program on 1985 and 1986 Chrysler LeBaron GTS and Dodge Lancer models.

The "Buyer's Choice" program offers the 8.6 APR Chrysler Credit Corp. financing for 48 months, 9.5 APR financing for 60 months or a $500 cash rebate.

The rebate may be applied to the purchase price of the vehicle.

No termination date was announced for the program, and it may not be combined with any other program.

The Chrysler announcement was expected.

General Motors, Ford Motor Co. and American Motors all announced APR programs of their own at the beginning of October, when Chrysler was in the middle of contract negotiations with the UAW and production was in jeopardy.

At that time, industry analysts expected Chrysler to join the other auto makers following renegotiation of the contract with t' UAW.

The GM, Ford and AM' are due to expire in thi' could be extend

The Prima diesel makes its debut at Perkins Engines' plant in Peterborough, England. The 300 pre-production engines will be tested by ARG.

Prima of the diesel crop

Perkins begins production of new engine

Production of what is said to be the world's first high-speed direct injection diesel engine is underway at the Peterborough, England, factory of Perkins Engines.

A pre-production run of 300 engines, which has been jointly developed by Perkins and BL's Austin Rover Group, are being built prior to full production early next year.

Austin Rover is expected to offer the engine in its mid-range Maestro and Montego models. Technical details of the engine and its performance, are still secret but it is said to be a four-cylinder of 2 liters displacement.

Gordon Mitchell, Perkins vehicle operations manager, says the engine's economy will be highly acceptable. "Diesels already offer 25 percent improved on-the-road economy compared with similarly powered gasoline engines, and we can improve on that."

Perkins refers to the engine as Prima. It will assemble and test them at Peterborough from major machined components supplied by Austin Rover' Longbridge factory.

Prima is understood to be a diesel adaptation of Austin Rover's O-series gasoline engine. The development contrasts with a similar scheme which Perkins began with another BL division, Land Rover. That was to make a diesel out of Land Rover's gasoline V8, but the Iceberg, as it was known, melted during technical development. Land Rover is now planning to buy someone else's diesel engine for use in the luxury Range Rover station wagon.

The need for manufacturers to offer a competitive diesel alternative in passenger cars in Europe may not be fully appreciated in North America. Diesel demand continues to grow in Europe. One in every eight new cars last year was a diesel, and the demand has not slowed this year. It has been particularly marked in the largest national market, West Germany, where the emission debate accelerated the trend.

At the end of August the proportion of diesel-powered cars registered this year in West Germany was 20.6 percent, compared with 12.5 percent one year earlier. In France it was nearly 15 percent compared with just over 12 percent. In Italy more than 25 percent of all new cars are diesels.

Of the four large European markets, only UK has a small diesel penetration — though it is growing dramtically thanks to domestic makers like Ford and Vauxhall.

Perkins, Austin Rover's partner in the Prima project, manufactured its 10-millionth engine Oct. 7. The company was founded 53 years ago by Frank Perkins and fellow engineer Charles Chapman.

Perkins' plant in the Peterborough suburb of Eastfield covers 150 acres, is said to be the largest engine plant in the world. The site was acquired in 1937 for 2,780 pounds (equivalent to about $3,900 today). Worldwide production last year surpassed 388,000.

The company, among the world's leaders in diesel power, builds engines ranging from 30 HP to 1,200 HP. Engines are in three, four, six, eight and 12 cylinder configurations, in both in-line and vee layouts.

Automotive News analysis of new-car registrations based on R.L. Polk & Co. statistical report. New York, Oklahoma for 1984 and Oklahoma for 1985 from manufacturers' sales records.

Imports up 24 pct.; domestics gain 3 pct.

August registrations best since '78

By Jenny L. King
Detroit Reporter

New-car registrations in August were the highest for that month since 1978's record performance. Imports, up nearly four percentage points, once again outgained the domestics, caught in a lethargic market much of the calendar year.

Domestic registrations, reported at 642,543 by R.L. Polk & Co., were up 2.98 percent from 623,957 in August a year earlier. They were off 2.41 percent from the July tally of 658,395.

Table on Page 34

Imports were up 24.48 percent August to August, to 283,516 from 227,758. They captured 30.62 percent of the market compared with 26.74 percent a year ago.

Total August registrations of 926,059 were up 8.73 percent from 851,715 in 1984. It was the best August since record registrations of 1,060,588 were reported in 1978.

Chrysler Corp. was the sole domestic corporation to push its share of the market above the year-ago level. General Motors yielded 3.06 percentage points, Ford Motor Co. was off 1.58 percentage points and American Motors dropped 0.44 percentage points.

Chrysler's steady sales growth boosted the company to 9.98 percent of the total new-car market. A year earlier, it had 8.78 percent. GM tumbled to 41.40 percent from 44.46 percent. Ford dropped to 16.95 percent from 18.53 percent, and AMC had a modest 1.05 percent, down from 1.49 percent in 1984.

The 30 miscellaneous domestic cars registered were too few to earn a significant part of a percentage point either year.

Looking at domestics alone, the August, 1985, market was divided in the following manner: GM had 59.67 percent, Ford had 24.43 percent, Chrysler had 14.39 percent and AMC had 1.51 percent. A year earlier, GM had 60.69 percent, Ford had 25.29 percent, Chrysler had 11.98 percent and American Motors had 2.04 percent.

The imports' 30.62-percent share of the market made them easily the largest single group. Intermediates were second at 24.61 percent, followed by compacts at 16.22 percent, subcompacts at 10.67 percent, standards at 9.11 percent and luxury models at 8.77 percent.

The domestics-only market-class breakout featured intermediates at 35.47 percent, compacts at 23.39 percent, subcompacts at 15.38 percent, standards at 13.12 percent and luxury cars at 12.64 percent.

Total new-car registrations at the end of eight months were up 5.37 percent from the comparable 1984 period, climbing to 7,134,159 from 6,770,514. The domestic figure of 5,250,094 was up 2.54 percent from 5,120,225 a year earlier; it was up 25.76 percent from 4,174,772 in 1983.

New import registrations were up 14.17 percent, to 1,884,065 this year from 1,650,289. Their share of the market increased by 2.03 percentage points, moving up to 26.41 percent from 24.38 percent.

For the eight months, GM lost 3.24 percentage points, plunging to 42.45 percent from 45.69 percent. Ford was up 0.35 percentage points, to 19.17 percent from 18.82 percent. Chrysler advanced 1.44 percentage points, finishing August at 10.76 percent compared with 9.32 percent a year earlier. AMC was down 0.58 percentage points, to 1.21 percent from 1.79 percent.

Avanti has Nov. 25 deadline for filing reorganization plan

By Edward Lapham
Marketing Editor

Avanti Motor Corp. has until Nov. 25 to develop a reorganization plan, or face liquidation.

Under the terms of an agreed order entered in Federal Bankruptcy Court in South Bend, secured creditor 1st Source Bank can force liquidation of the car maker, or propose its own reorganization plan, if Majority Shareholder Stephen H. Blake, his investor group and the unsecured creditors committee fail by then to produce an acceptable plan to keep the company going and repay the bank.

Avanti owes the bank more than $3 million.

Under the terms of the order, the reorganization plan must be confirmed by the bankruptcy court by Jan. 16.

The stipulated order also allows the company to continue selling cars and parts until Nov. 25.

The new deadline and the terms of the order further limit the company's options through a series of restrictive covenants.

They included Avanti assigning the bank corporate power of attorney, agreeing to appointment of an auditor plus agreements by Blake on behalf of himself and the company not to sue the bank, its officers or directors.

The stringent covenants also seem to all but kill Avanti's plan to move assembly operations to the Detroit area.

The agreed order was the result of negotiations by concerned parties. Avanti was in technical default of earlier covenants and an order which had a deadline of Sept. 30 for a reorganization plan.

There's a gleam in corporate eyes

New lights stir auto interest

Continued from Page 22

able in a wide variety of colors and shapes. They backlight liquid crystal diode displays, membrane switches, keyboards and computer displays. The growing number of hopefuls in the field is convinced they'll be used extensively in vehicle instrument panels and controls.

The facts that EL installations are thin, compact and cool are important to instrument-panel designers. Space is limited and growing more so, of course. And, using today's lighting technology, light pipes—tubes through which light passes—must be molded into plastic panels, a tough and costly job of design and production.

Too, heat is a natural enemy of plastic and, as more items are added to panels, heat becomes a more critical problem, those in the field say.

"The versatility of electroluminescence is incredible," said Rodney Reck, president of Loctite's EL.

"It's used for costumes in the Broadway musical Cats, for Exit and other signs; for intricate instrument faces and many other applications. It can be built right into the construction of an automotive dashboard," Smith said.

In addition to dashboards, EL offers designers new options in creating new lighting for switch panels, logos, accessories and environmental comfort controls.

Loctite's Smith sees EL lights as being more reliable and serviceable than the more complex systems such as vacuum fluorescent, liquid crystal, gas discharge and cathode ray techniques.

"The design potential of EL is unlimited," he said. "The effects are functionally and aesthetically remarkable. Because of its simplicity, EL is superior in cost, reliability, beauty and low power requirements."

He expects about half a dozen EL applications per car during the next few years. They are used now as coach lights and switch panel lights.

"To earn a bigger future in auto displays, EL must develop greater daylight viewing brightness," he said.

A bright EL light under night viewing conditions is working at a level of one or two foot-Lamberts of brightness. For daylight viewing, the same light must operate at a level of 120 foot-Lamberts.

"We achieve this spread by changing the power to the lamps," Smith said. "There's a trade-off between brightness and longevity. The brightest lights are needed for warnings which are used only for short periods of test or fault indication."

Current auto display standards still are built around incandescent bulbs, Smith said. "EL lights have greater overall area visibility but no single-point intensity," he said. "Some new thinking is needed here," he said.

Another area in which the industry needs to alter its thinking is in heat standards, Smith said.

"Many tests are geared to high heat because of the combined ambient temperature and heat generated by bulbs and electronics. ELs generate no heat so such standards are inapplicable," he said.

Smith said Loctite got into the EL business because of what he calls "the right chemistry." Beyond chemistry, Loctite is making advances in EL manufacturing methods based on its expertise in automation and electronics, he said. Smith said EL's soft, glare-free qualities and its aesthetic characteristics will be used in coming car designs.

"Instrument panels will be reduced to one-quarter-inch thick units with no bulbs and no heat to dissipate. The EL lights will be found throughout the car as courtesy lights, logo lights and in other decorative uses," the Loctite executive said.

Loctite said the history of electroluminescence goes back to 1936 when French Scientist Gerard Desriau first worked with zinc sulfide crystals. Current designs are refinements of Desriau's basic development.

When phosphors are mixed with other materials, they produce changes in color, the company said. Light originates from distinct spots within each phosphor grain and is affected by grain structure, excitation voltage, frequency and temperature. Mixing and doping increase brightness and life.

The layering of electrodes, insulators, phosphors and moisture barriers is similar to capacitor designs with the exception that EL lights are flat. It would be correct to describe them as light-emitting capacitors, the company said.

25 with Cadillac

Neill Lehr Sr., right, Neill Lehr Cadillac, Inc., Northridge, Calif. receives a 25-year-dealer award from C.J. Gallacher, Cadillac's Los Angeles zone manager.

EDS reports quarterly profit of $52 million

DALLAS.—Electronic Data Systems Corp., General Motors' computer services subsidiary, reported earnings of $51.9 million on sales of $921.9 million for the third quarter.

That compares with income of $20.7 million on sales of $239.0 million for the same quarter a year ago, which was before GM purchased EDS.

EDS received $668.7 million in revenue from GM. GM business in the same year-ago quarter amounted to only $15.5 million. EDS began taking over GM's data processing operations in July, 1984.

Revenues from non-GM customers amounted to $242.3 million, up 12 percent from $217.1 million in the same quarter a year ago.

For the first nine months of 1985, EDS had income of $132.4 million on sales of $1.6 billion. That compares with profits of $57.6 million on sales of $666.7 million in the 1984 period.

Pa. dealers slate Arizona meeting

HARRISBURG, Pa.—The fall business conference of the Pennsylvania Automotive Assn. will be held Nov. 9-13 at Marriott's Camelback Inn, Scottsdale, Ariz.

Speakers will include William J. Symes, NADA president and head of Symes Cadillac, Pasadena, Calif., and Robert Monteith, president of Security Pacific Corp., Westlake Village, Calif.

Also on the program will be Lee Galles, president of Competitive Edge, Inc., Albuquerque, and owner of an Oldsmobile-Isuzu dealership.

GM additions spark increase

U.S. model total rises to 313; tops since '75

Continued from Page 1

Chevrolet Citation and Buick Skylark X-cars. Production of the Chevy-Buick X-cars ended last May, but they were kept in the model count because they were still available in the showrooms.

GM made the most extensive changes in its model lineup. The Buick Skyhawk and Chevrolet Cavalier lines were expanded, and four-door sedans were added to the coupes in the GM20 series—Pontiac Grand Am, Buick Somerset and Oldsmobile Calais. Buick saved the Skylark name, putting it on the Somerset four-door.

In all, GM added 33 models and dropped 21 for a net gain of 12.

One GM departure was a hallowed name in the industry: Chevrolet Impala, which had been on the scene since 1958 and which for years was the best-selling U.S. car line. All the full-size Chevys now carry the Caprice badge. But purists can argue that the Impala isn't really gone; the base Caprice four-door sedan has the same model number as last year's Impala.

1986 TOTALS	118	138	13	44	313	
1985 TOTALS (end of model year)	108	136	13	38		(295)

*—Two-door total includes hatchbacks, which some makers list as three-door models.

**—In the Subcompact listing, totals for Honda (Accord), Nissan (Sentra), Renault (Alliance and Encore) and Volkswagen (Golf/GTI) include only U.S.-built models.

Buick and Cadillac bailed out of the convertible market for 1986. The Riviera and Eldorado ragtops have been discontinued.

Taurus (eight models) and Sable (four) were the big additions at Ford Motor along with a new four-model LX series for Ford Crown Victoria. Escort lost four models; there are fewer "Designer" offerings for Lincoln Continental and Mark VII, and there were assorted trims or expansions in other lines.

Chrysler made few changes. Dodge 600 and Plymouth Caravelle have an extra four-door sedan, and Chrysler Laser Turbo now is counted as a separate model. A Daytona Turbo has been dropped.

Renault Alliance added a base four-door sedan and dropped its high-line four-door. Encore's base hatchback is gone, but an "Encore Electronic" hatchback has joined the team.

Honda changed model designations for the Accord, but the lineup remains the same—three sedans and two coupes. VW made no changes in its Golf/GTI setup.

In all, the domestic makers added 58 models for 1986 and dropped 40 for a net gain of 18.

The Automotive News model analysis includes all models the domestic manufacturers are pricing or merchandising individually. It does not include engine or transmission options.

Turbos are counted as models. It is felt that they have enough differences in trim, equipment and mechanicals to qualify for separate model designation.

The current 313 models consist of 118 four-door sedans, 138 two-doors, 13 convertibles and 44 four-door station wagons. The two-door total includes hatchbacks, which some makers list as three-door models. Likewise, some of the four-doors are hatchbacks.

The final count for 1985 was 108 four-doors, 136 two-doors, 13 convertibles and 38 wagons.

By market class, the 1986 listing shows 65 subcompacts, 87 compacts, 93 intermediates, 34 standard-size cars and 34 luxury cars.

At the end of the 1985 season, there were 71 subcompacts, 81 compacts, 75 intermediates, 30 standard-size cars and 38 luxury cars.

Ford Division leads the domestics with 40 models for 1986, followed by Buick and Pontiac with 39 apiece, Chevrolet with 34, Oldsmobile with 31 and Mercury with 30.

Totals for other U.S. makes are: Dodge, 25; Plymouth, 15; Renault, 14; Chrysler, 14; Cadillac, 10; Lincoln, 8; Honda, 5; AMC, 3; Nissan, 3, and VW, 3.

The 1985 leaders were Ford, 39; Pontiac, 38; Buick, 37, and Oldsmobile, 29.

Chevrolet Cavalier tops the individual nameplates with 13 models. Buick Skyhawk is next with 10, and Pontiac Sunbird has 9. There are 8 models apiece for Dodge Aries, Plymouth Reliant, Renault Alliance, Ford Crown Victoria, Ford Escort, Ford Taurus and Mercury Lynx.

Pace is two weeks ahead of 1984

Year's auto output tops 7 million

By Kathy Boyer
Detroit Reporter

U.S. makers built their seven-millionth car of the year last Friday (Nov. 1), two weeks ahead of 1984.

When the six-millionth car was built on Sept. 20, the makers were also two weeks ahead of 1984.

So far this year, 7,016,778 cars have been assembled, 4.94 percent more than the 6,686,514 units completed last year at this point.

Last week's estimated output of 176,712 cars was up 15.93 percent from the previous week's 152,430, when production at Chrysler was halted by a strike.

Last week's build was 17.62 percent more than the year-ago week's 150,235, when General Motors' domestic plants were returning to normal production levels after a strike in Canada.

Last week's estimated production was shared as follows: GM, 58.91 percent; Ford Motor Co., 20.83 percent; Chrysler Corp., 13.86 percent; Honda of America Mfg. Co., 1.61 percent; American Motors, 1.56 percent; Volkswagen of America, 1.33 percent; New United Motor Mfg., Inc., 1.08 percent, and Nissan Motor Mfg. Co., U.S.A., 0.82 percent.

GM's Lakewood (Ga.) plant was scheduled for two overtime shifts Saturday (Nov. 2).

Ford has scheduled daily overtime this week (Nov. 4) at the following plants: Chicago; Dearborn; Edison, N.J.; Kansas City; Lorain, O.; Wayne, Mich., and Wixom, Mich.

Saturday (Nov. 9) overtime has been slated at all those Ford plants except Chicago.

Chrysler has scheduled daily overtime this week at Belvidere, Ill.; Newark, Del.; St. Louis (No. 1), and Sterling Heights, Mich.

Commerce Dept. says Japan is dumping cellular phones

By Geoff Sundstrom
Washington Reporter

WASHINGTON.—The Commerce Department's International Trade Administration has ruled that Japanese cellular mobile phones, used almost exclusively in automobiles, are being sold in the U.S. at prices lower than those charged in Japan.

The ITA's final determination clears the way for action by the International Trade Commission, which held a hearing on the case Oct. 30.

If the ITC agrees with the ITA, an antidumping order would be issued asking the Customs Service to require a cash deposit equal to the dumping margin on the Japanese imports.

The Commerce Department found that five of Japan's largest cellular phone producers have weighted-average dumping margins ranging from 2.99 percent to 106.60 percent.

The case was brought by Motorola, Inc., which contended that predatory pricing by Japanese manufacturers has all but driven the other two domestic producers of mobile phones out of the cellular phone business and has seriously injured Motorola's competitive position in the market. The other two producers are General Electric Co. and Western Union's E.F. Johnson Co.

The Commerce Department found weighted-average margins of 9.72 percent for Oki Electric Industry Co., Ltd.; 2.99 percent for Hitachi, Ltd.; zero for Toshiba Corp.; 87.83 percent for Mitsubishi Electric Co.; 95.57 percent for NEC Corp.; 106.60 percent for Matsushita Communication Industrial Co., and 57.81 percent for all other manufacturers and exporters.

The case is being watched closely in Washington because it is one of the government's biggest cases involving unfair trade practices in Japanese high-technology goods.

In negotiations with Japan regarding U.S. telecommunications exports to that country, U.S. Government and industry representatives have claimed that the Japanese are delaying serious progress.

The Commerce Department finding in the mobile telephone case is expected to increase pressure on the Japanese to accelerate negotiations.

Hyundai chooses Jacksonville port

GARDEN GROVE, Calif.—Hyundai has chosen Jacksonville, Fla., as its Southeast port of entry.

Robert T. Miller, national import manager for Hyundai Motor America, said Jacksonville will receive about 3,000-3,500 cars per month.

Chrysler returns; truck production rises 4.3 pct.

Domestic makers' estimated production of 67,597 trucks last week was up 4.25 percent from the previous week's 64,844, when the strike at Chrysler Corp. was in progress.

Last week's targeted output was 6.61 percent more than the year-ago week's 63,407.

So far this year, 2,792,610 units have been assembled, 5.28 percent more than the 2,652,513 built last year at this point.

General Motors scheduled overtime Saturday (Nov. 2) at its Baltimore plant.

Ford Motor Co. has scheduled daily overtime this week (Nov. 4) at these plants: Kansas City; Louisville; Lorain, O.; Wayne, Mich., and Norfolk.

Saturday (Nov. 9) overtime is slated at Ford's plants in Kansas City and Lorain.

Saturday (Nov. 2) overtime was scheduled for Chrysler's Warren (Mich.) plant.

The Warren plant is also scheduled for daily overtime this week (Nov. 4).

Canadians slate best car build since May, 1983

Canadian makers scheduled 26,723 cars last week, the highest output since the week ended May 14, 1983, when 27,994 cars were built.

In addition, year-to-date auto production passed 900,000—nine days ahead of 1984—reaching 907,046 at week's end.

Last week's scheduled output was 8.41 percent more than the previous week's 24,650 and was also 23.65 percent better than the year-ago week's 21,612.

The year-to-date aggregate is 2.18 percent more than the 887,662 cars built last year at this point.

Canadian truck makers' estimated output of 17,119 units last week was 50.21 percent more than the previous week's 11,397, when Chrysler plants worked only half shifts.

Last week's production was 1.26 percent more than the year-ago week's 16,906.

So far this year, 685,635 trucks have been assembled, slightly above (0.50) the 682,224 built last year at this point.

25 with Chevy

SACO, Me.—Frank J. Galos, Frank Galos Chevrolet, Inc., has received a 25-year-dealer plaque from Chevrolet.

Nissan tips its racing hand

Tucked at the back of Nissan's Tokyo Auto Show exhibit was an IMSA GTO version of the Mid4. The mid-engined 4WD racer is expected to be headed for U.S. circuits.

Shop volume shows upturn for September

By Jack Walsh
Service Editor

Franchised new-vehicle dealers' service and parts business in September was up significantly over the August volume and was far better than in the same month a year ago.

During the month, according to the Automotive News Service Index, shop volume was up 10.4 percent over last year, with strong gains in all six indicators used in the survey. September business was 3.5 percentage points higher than the August volume.

The rate of growth during the month was the highest since last May, when shop volume soared 13.5 percent above that in May, 1984.

For the first nine months of 1985, service and parts volume showed a gain of 8.5 percent over the like period a year ago, and there were strong advances in all six indicators.

In September, the leading indicator was total labor sales, customer-paid and warranty. They were 16.7 percent higher than those in the same month in 1984. The number of repair orders written during the month, customer-paid and warranty, was up 11.4 percent from a year ago.

September sales of shop parts, those used in customer-paid and warranty repairs, rose 9.8 percent over last year, and sales of all parts and accessories during the month showed a gain of 9.2 percent.

Sales of parts and accessories to off-premises customers were up 8.7 percent in September over a year ago, while gross profit on all labor, parts and accessory sales was 4.9 percent higher than shop earnings in the same month in 1984.

Through September, the No. 1 indicator was total labor sales, which were 11.4 percent higher than a year ago. The number of repair orders written in the first nine months was up 8.9 percent, and shop parts sales rose 8.2 percent over the like period in 1984.

Gross profit on all labor, parts and accessory sales in the January-September period showed a gain of 8.1 percent. Nine-month sales of parts and accessories to outside customers were up 6.8 percent, and total P&A sales were 6 percent higher than a year ago.

Service Index figures are compiled from reports on shop business from a cross-section of the nation's new-car and truck dealerships.

SERVICE INDEX
110.4*

	Sept. '85 vs Sept. '84	9 mos. '85 vs 9 mos. '84
Gross Profit on All Labor and P&A Sales	+ 4.9%	+ 8.1%
Repair Orders Written	+ 11.4%	+ 8.9%
Total Labor Sales (Customer & Warranty)	+ 16.7%	+ 11.4%
Shop Parts Sales (Customer & Warranty)	+ 9.8%	+ 8.2%
Sales of All P&A	+ 9.2%	+ 6.0%

*—Survey by Automotive News shows that dealers service and parts business in September, 1985, was 110.4 percent of business in September, 1984. Service business in the first nine months of 1985 was 108.5 percent of business in the corresponding period in 1984.

Some stock-issue funds will go to European facility

Yugo investors to help build plant

By Richard Feast
European Editor

KRAGUJEVAC, Yugoslavia.—Investors in the forthcoming public stock offering by Yugo America, Inc., will be helping to finance a new automobile factory to be built here.

The Zastava company which makes the Yugo models is investing about $300 million in an additional facility that will come on-stream late in 1987 or early in 1988.

Most of that money will be generated internally by Zastava, but car factory director Srboljub Vasovic added, "One thing is certain: Yugo America will be one of the financing companies."

The news comes as Yugo America is laying plans to pay for its expansion with a public flotation (Automotive News, Oct. 28). William Prior, president, said he is unable to comment in any way until Yugo America's prospectus has been filed with the Securities and Exchange Commission in the middle of December.

"The attorney says I am to keep my mouth shut. But what I can say is we are very enthusiastic about the future," Prior said in Montvale, N.J.

In an interview with Automotive News, Vasovic said, "What we can say at this stage is there is intention and goodwill on the part of Yugo America to finance our projects. The amount of money they are willing to invest will depend on the current discussions."

He added with a smile, "So, if we want to sell one million cars on the U.S. market, the investments will be higher."

The new factory will produce two models currently under development, the 103 hatchback and the 104 sedan. The cars, similar in size to Volkswagen's Golf and Jetta, will replace the 101 series, which is based on the design of the old Fiat 128. The 101 is sold extensively in Yugoslavia and exported to many European countries, but there are no U.S. sales plans for it.

The factory will be located on a 200-acre site (already purchased) at Korman, about four miles from the sprawling Zastava complex in the Serbian town of Kragujevac. It will contain body, paint shop and final assembly operations and utilize stampings and machine parts made in the main factory's machine and press shops.

It is a highly significant development for the company, which is officially known as Zavodi Crvena Zastava (ZCZ), or Red Flag Enterprises. It will represent a doubling of capacity to around 400,000 annually and a concentration on just two basic model lines.

In addition, the expansion is being accompanied by a steady swing toward more automated methods of production. Zastava's only present automation is in the paint shop, but Vasovic insists more will be added.

"Automation will be introduced, first, in those areas where it is dangerous to work, and later in those areas where we can increase productivity," he said.

The prospect of high sales in the U.S. has accelerated developments at Zastava. The company has promised to ship 10,000 Yugos to the U.S. this year, or one-fifth of the total Yugo production. Next year, the number is 60,000 for the U.S. out of total Yugo production of 130,000. Total production of all models in 1986 is expected to be in excess of 200,000.

Based on projections provided by Yugo America, Zastava believes it will be selling 150,000 cars a year in the U.S. market by 1988. The vast majority of those will be the 55 models (to be revised for the 1987 model year), as the new generation 103/104 will only just have been put into production.

Imports set any-month record

Domestic slip cuts October sales

By Jenny L. King
Detroit Reporter

October proved to be a payback month for the domestic auto makers and a go-ahead month for the imports.

Import sales notched an any-month record along with a new high for October. Domestics sales, no longer propelled by the wide range of late-summer customer incentives, sputtered and coughed, finishing the month 91,000 units behind October, 1984.

The imports' share of the total U.S. new-car market climbed to an October peak of 30.79 percent. It was the first time in 34 months the imports have pushed past 30 percent, and it was their highest share since the alltime high of 32.74 percent in August, 1982.

Domestic sales were down in all three 10-day reporting periods in October and finished the month off 13.22 percent from the preceding year. Domestic sales totaled 598,399 this October compared with 689,563 in 1984. Record sales for the month were notched back in 1971: 933,713.

Sales of new imported cars were up 24.99 percent October to October, to a record 266,278 from 213,040. The previous any-month record was 265,398 in July of this year.

Combined import-domestic sales were off 4.20 percent, to 864,677 from 902,603.

Domestic sales for January through October were 5.01 percent ahead of their 1984 counterpart, adding to 7,130,440 versus 6,790,003.

The import year-to-date total of 2,344,567 was 14.47 percent ahead of 2,039,535. Imports were only some 97,000 units shy of the 2,441,341 reported for 12 months, 1984, a record that surely will be shattered this month.

GM ends COLA pay for salaried workers

By Mary Connelly
Detroit Reporter

General Motors will discontinue cost-of-living payments to salaried workers in the U.S. and Canada in 1986 in favor of merit pay raises.

Since 1948, GM has been making quarterly adjustments to salaried workers, pegged to the cost of living. Salary increases for 125,000 salaried workers will be based solely on job performance as of Jan. 1.

The move is part of the evolution in GM's salaried compensation system which began in 1973, according to William P. MacKinnon, vice president in charge of the Personnel Administration and Development Staff.

He said GM has been working for 12 years to tailor the compensation program for salaried workers to the specific needs of the individual.

He cited the informed-choice health care plan coverage, which allows employes to choose from a range of benefits, and other options such as the savings stock purchase program for salaried workers.

"It's also in keeping with our more autonomous organization and decentralized decision-making," MacKinnon said. "It's the result of an individual assessment at each division, staff and group. It's not something they were required to do, asked to do or told to do."

Twelve divisions and staffs covering about 15,000 salaried workers decided to abandon COLA in favor of merit pay increases as of Jan. 1, 1985, MacKinnon said. Most employes have viewed the change "positively," he said.

"The change that we have now is a collection of individual decisions by divisions, groups and staffs and, in turn, follows a shift in compensation in North America over the past 12 years," he said.

"I think the main thing we expect to see is a sense among salaried workers that they will be recognized, based on personal contribution and effort," MacKinnon said of the merit pay system.

Many employes had commented that under the COLA system, salaries were boosted by a uniform dollar amount without regard for an employe's job or performance, he said.

Because dollars will no longer have to be set aside for COLA payments, GM will be able to pay

August registrations climb 24 pct.

Imports take 30 pct. of market

By Jenny L. King
Detroit Reporter

Imports claimed 30.62 percent of the new-car-registration total in August, a gain of almost four percentage points over 26.74 percent the same month a year earlier.

The late-summer marketplace had not yet reflected the sales explosion ignited by record-low interest rates offered by domestic auto makers on loans to new-car customers.

R.L. Polk & Co. reported registrations of 283,516 for August, up 24.48 percent from 227,758 in 1984. This year's August total was off 2.48 percent from 290,738 the preceding month. July imports took 30.63 percent of the overall new-car market.

Toyota topped the 10 strongest imports in August with 21.02 percent of the import market. It was a drop of 1.51 percentage points for the company, but Toyota kept a slight lead over second-place Nissan at 19.67 percent. Nissan, too, was off from August, 1984, slipping 0.78 percentage points from 20.45 percent.

Honda, a distant third, slumped to 15.15 percent from 19.67 percent, although registrations (including U.S.-built Accords) were off only 2,000 units. Volkswagen, also an import-domestic combination, moved into fourth from fifth place and gained 0.99 percentage points. Mazda, down 0.20 percentage points, slipped to fifth.

Subaru was up 0.06 percentage points, Volvo gained 0.39 percentage points, BMW was up 1.07 percentage points, Mercedes-Benz stepped past Audi into ninth place with a 1.09-percentage-point gain, and Audi improved its share by 0.67 percentage points.

Ten imports claimed 87.53 percent of the August import market, down from 90.27 percent in 1984.

Import registrations for eight months totaled 1,884,065, up 14.17 percent from 1,650,289 the preceding year. Of the entire U.S. market, imports claimed 26.74 percent, 2.37 percentage points ahead of the 24.37 percent notched a year earlier.

Toyota was the number-one import January through August both years, with 19.41 percent of the 1985 import total versus 19.88 percent in 1984. Honda finished second with 18.90 percent this year compared with 19.94 percent 12 months earlier. Third-place Nissan, with 18.75 percent, was close behind Honda but also was off from its 1984 level (19.08 percent).

VW was down 0.07 percentage points, Mazda was down 0.07 percentage points, Subaru was down 0.36 percentage points, Volvo was down 0.33 percentage points, Mercedes-Benz moved up 0.21 percentage points, BMW was up 0.35 percentage points and Audi slipped 0.04 percentage points.

The top 10 makes' registrations added to 88.21 percent of the total, down from 89.91 percent a year ago.

Japanese imports held 71.31 percent of the August import market, down from a stronger 75.97-percent position in 1984. West German products, recovering from a strike-related year-ago slump, expanded to 14.12 percent from 9.24 percent. U.S. Golfs and Accords earned 7.64 percent, down from 8.20 percent, and Swedish Saabs and Volvos were up to 5.25 percent from 4.66 percent of the August, 1984, total.

Numbers of cars from each country included:

	August 1985	August 1984
Japan	202,168	173,022
W. Germany	40,040	21,050
United States	21,666	18,671
Sweden	14,887	10,626
France	2,213	2,761
Great Britain	1,933	801
Italy	609	805
Ireland	0	25
TOTAL	283,516	227,758

Year-to-date registrations were 70.43 percent Japanese, 14.08 percent German, 8.43 percent U.S.-built and 5.21 percent Swedish. The numbers were as follows:

	8 Mos. 1985	8 Mos. 1984
Japan	1,327,029	1,177,952
W. Germany	265,322	211,341
United States	158,890	133,895
Sweden	98,241	90,502
France	16,495	20,916
Great Britain	13,301	11,111
Italy	4,792	4,304
Ireland	0	268
TOTAL	1,884,065	1,650,289

Import truck registrations in August were up 30.01 percent, to 88,518 from 68,084 last year. Toyota outdistanced second-place Nissan by nearly 17,000 units, Mazda retained third place and Isuzu captured the fourth place occupied by Dodge Ram 50 a year earlier. Imports from the top makers included:

	August 1985	August 1984
Toyota	38,277	29,310
Nissan	21,806	15,574
Mazda	10,548	10,345
Isuzu	7,289	—
Dodge Ram 50	—	4,634
Others	10,598	8,221
TOTAL	88,518	68,084

Year-to-date import truck registrations totaled 628,855, a 32.05-percent gain from 476,240 in 1984. Following are results from the major makers:

	8 Mos. 1985	3 Mos. 1984
Toyota	245,087	180,705
Nissan	172,908	131,415
Mazda	72,826	75,531
Isuzu	48,514	—
Dodge Ram 50	—	29,089
Others	89,520	59,500
TOTAL	628,855	476,240

Cavalier captures the crown

Chevrolet product tops Escort in '85 output

By Colleen Belli
Assistant Industry Editor

In what has been a close race, Chevrolet Cavalier finished the 1985 model production run in first place: 383,785 Cavaliers were built.

Just behind the leader was the hot-selling Ford Escort, placing second at 364,345.

It was a year in which General Motors suffered a week-long UAW strike, causing work stoppages nationwide. In addition, several GM plants had late fall startups last year due to extended 1984 model runs on certain car lines. Later, GM worked extensive overtime to make up lost time and meet sales demand.

The '85 model year also was marked by newcomers to the domestic scene. Nissan began production of Sentra cars at Smyrna, Tenn., and NUMMI, the GM-Toyota joint-venture company, began building Nova models at Fremont, Calif.

The domestic industry turned out 7,955,037 cars during the 1985 model year, down from 8,129,313 in the 1984 model run.

Most of the drop is attributed to Chevrolet which extended 1984 production of certain models, including Chevette, Cavalier and Celebrity, in order to meet CAFE requirements.

In addition, Chevette, which had been built at two plants, was reduced to one.

Chevrolet finished the '85 model year with 1,418,098 cars, down from 1,682,195 the previous year.

The Chevrolet tally affected the GM total which was 4,460,261, down from 4,709,521 in 1984. GM discontinued X-car production — Citation, Omega, Skylark and Phoenix — in midyear. In addition, El Camino production was shifted to Mexico.

Also contributing to the industry drop were American Motors and Volkswagen.

AMC lowered production rates at Kenosha, Wis. AMC output was 150,189 for '85, down from 208,624 in the '84 model year.

Volkwagen, which extended production of '84 Rabbits into November last year, began output of Golf in December at Westmoreland, Pa. VW's short '85 run totaled 82,797.

On the positive side, Chrysler built 1,325,592 cars during the 1985 model year, up from 1,176,144 the previous year. Chrysler opened a new assembly plant in December at Sterling Heights, Mich., to build its all-new LeBaron GTS and Lancer.

Electronics

Continued from Page E-33

ing scheme to handle the functions we want. How do we add functions after we have multiplexing? We just tack them on after the system is in place.

"Development of these systems also allows development of diagnostic functions that will be of tremendous value to service personnel. We have diagnostics right now in the engine control module (ECM). We were able to do that because we have a computer with a memory. It reads messages that say so-and-so is not right, and gives a code-up.

"With an interactive system, there is memory capacity to do the same thing. The driver may push a selector switch, and it doesn't work properly. Why? Is it the switch itself or did the light just not go on? If you've got the diagnostics built into the computer, it can tell you via read-out where the problem is. We're translating what we learned in the ECM into the body computer," Cain says.

B.J. Raskauskas, staff engineer-automotive electronic systems, notes that great strides are being made in diagnostics: "Look at the 1986 E and K cars, especially Riviera. The CRT gives them more flexibility because now technicians have a means of printing out in English just what a problem is. It's not derived from a number that blinks on the instrument panel."

GM body computers will be the main interfaces with diagnotics equipment. "In those computers, there is a fairly significant amount of memory to do diagnostics and detect failures," says Larry L. Schwartz, program manager, automotive electronic systems. "We should have output points on the computer itself to tell if a sensor, for example, fails. We'll have a sensor resistance element with a voltage range associated with it. If the sensor has failed, or there's a short or an open in the harness, it would be detected."

In the newest GM cars, a serial link ties two computers together. Called UART, for "universal asynchronous, receive transmit," it is a data link that has access to information that would be common.

"For example," Schwartz says, "engine speed, would be on the UART bus. The ECM has access to the engine speed information and so does the body computer which can display it on the CRT as rpm. That means multiple sensors won't be necessary to handle every function that requires one."

Adds Schwartz: "With more electronics being put on the automobile, we're going to have to start putting that information on data links that more than one computer will have access to."

In other words, where automotive electronics are concerned, we ain't seen nothin' yet.

Newcastle introduces Sinclair C5 in U.S.

Newcastle Co., Inc., New Castle, Pa., is introducing the Sinclair C5 electric, three-wheel, single-seater in the U.S. The C5, designed by Sinclair of England, is 69 inches long and 29 inches wide. Weight with battery is about 100 pounds. Newcastle will handle assembly and distribution in the U.S.

GM seeks EPA hearing on emission-control recall

By Jake Kelderman
Washington Reporter

WASHINGTON.—General Motors thinks the EPA has singled it out in addressing the industry-wide problem with evaporative emissions, and it's going to fight.

GM asked the EPA for a public hearing to defend itself against an EPA order that GM recall more than 80,000 1981 Pontiacs with 4.3-liter engines for failing to meet federal evaporative emission standards.

GM cited EPA's findings that more than 80 percent of all engine families manufactured by both domestic and import companies and tested by the EPA for evaporative emissions have failed the standard of two grams HC per test.

GM also mentioned EPA's lack of precise knowledge as to the cause of those failures and an outstanding petition from MVMA to change EPA's evaporative emissions test procedures.

GM suggested that EPA would do well to reserve any judgment on whether the GM cars meet evaporative emission standards until those issues are addressed.

If EPA's order stands, it will be the first time a manufacturer has been forced to recall cars for failure of evaporative emission controls.

In its petition, GM noted that EPA acknowledges that increased fuel volatility, fuel or activated carbon contaminants such as alcohols and other factors outside the control of the manufacturers may be at fault in the overall poor performance of evaporative emission control systems.

GM said it would like to ask the agency why GM cars should not also be subject to those same hazards.

In a SAE paper presented earlier this year showing only a one-third compliance rate for evaporative emissions on 1981 models, EPA cited some possible reasons.

They were: Design inadequacies; vehicle use patterns (frequency and length of trips, vehicle operating speeds, ambient diurnal temperatures); the effect of aging on the retentive capacity of charcoal canisters; fuel volatility, and alcohol blends.

The extent to which some of those factors might affect evaporative emissions has not been quantified, the EPA said, but it noted that it and "several vehicle manufacturers" were studying the issues. GM was one of those makers.

Under the Clean Air Act, any company has the right to ask for a public hearing on a proposed recall order.

Extra $1 a gallon gas tax urged to delay 1990 crisis

PALO ALTO, Calif.—American motorists should be taxed an extra dollar a gallon on gasoline, according to A.J. Horn, consulting professor in Stanford University's Petroleum Engineering Department.

According to Horn, the extra dollar would "postpone the inevitable energy crisis that otherwise will arrive in the U.S. by 1990."

"The dollar tax," Horn added, "also would cut the U.S. national deficit in half and help restore the nation's trading position. The scramble by the feuding nations in the Organization of Petroleum Exporting Countries to dump their oil is a direct menace to the economic position of the Western world.

"America has sown seeds of profligacy by using its energy resources recklessly," Horn said. "The U.S. will soon reap the whirlwind unless the public wakes up to its peril.

"Oil is a depleting national resource, just like natural gas, and the cheaper it is sold, the faster we exhaust our dwindling supplies. It it a crime against future generations for us to be so profligate with oil."

He continued, "The price of oil is only half of what it should be. Instead of $27 a barrel, it should be at least $50. If the price of oil doubled, there would be a great push to get automobiles that are far more fuel efficient, and our search for alternative energy sources would be transformed from indifference to enthusiasm.

"The rest of the nation," Horn said, "should follow the example of California where the Public Utilities Regulatory Policies Act stipulates that public utilities must buy electricity at the highest avoided cost.

"That means that instead of building more generating plants, they have to purchase any power offered to them by people operating windmills or geysers or even utilizing methane gas from processed cow manure.

"The new energy crisis, only about five years away, will be far more severe than the one of 1973," Horn predicted. "The Soviet Union also will be hit by the new crisis because that nation is now busily exporting its precious oil to Europe.

"Every day, American motorists use some 6.5 million barrels of gasoline," Horn said. "That is just about the total production of the U.S. The rest of our consumption, for industry and homes, totals some 5 million barrels a day and has to be imported.

"If we slapped a dollar tax on gasoline at American service stations, we would raise $100 billion a year."

Dana elects Morcott

TOLEDO.—S.J. (Woody) Morcott has been elected to the board of directors of Dana Corp. He is president of Dana's North American operations and has been with the company since 1963.

Welding robots are study topic

OSAKA, Japan.—A Japan-U.S. joint-venture study to develop artificial intelligence robots for welding will be launched by Osaka University and CGI, an affiliate of Carnegie-Mellon University, Pittsburgh.

The Welding Research Institute at Osaka University will provide the technology for the study, said to be the first of its kind in the world. The project's goal is to develop AI welding robots for practical use in three years.

A study group for the project will be established by about 15 Japanese firms, including Mistibishi Heavy-Duty Industries, Ltd.; Sumitomo Metal Industries, Ltd.; JCG Corp.; Toyo Engineering Corp.; Kobe Steel, Ltd., and Toshiba Corp.

Pa. dealers hike participation in insurance plan

HARRISBURG, Pa.—Lower health insurance rates for dealers who insure through the Pennsylvania Automotive Assn.'s Insurance Trust have resulted in many dealers either joining the plan or upgrading their policies to provide better protection. The new rates went into effect July 1.

So far this year, the trust has had a net gain of 63 dealerships with 2,595 employes in its group insurance program. The additions represent increases of more than 7 percent in dealer participation and 17.8 percent in employe participation, according to the PAA.

Rate reductions were due primarily to an "excellent claims experience record for dealerships and their employes," the association said. The plan has contracts with the INA and Prudential insurance companies and with Capital Blue Cross and Pennsylvania Blue Shield for various types of health coverage and for death and dental benefits.

During 1984, the premiums paid under experiencd-rated contracts were $17,476,103, and the total of benefits claims paid was $11,538,-998, the insurance trust said.

Imports set any-month record

Domestic slip cuts October sales

Continued from Page 5

reached 9,465,007, up 7.20 percent from 8,829,538 for the first 10 months of 1984.

Good sales news was spotty among the domestic makers. Chrysler Corp. was the only one of the Big Three to surpass its year-ago level, up 8.53 percent to 98,642 from 90,891. Ford Motor Co. tumbled the farthest, down 26.94 percent from last October, to 140,283 from 192,012.

General Motors was off 13.20 percent for the month, to sales of 325,572 from 375,075. American Motors slipped 29.83 percent, to 9,888 from 14,092.

Volkswagen reported a 51.31-percent increase, to 6,370 from 4,210. Honda was off 19.51 percent, to 10,691 from 13,283 and Nissan's U.S.-built Sentra sales added to 6,953 in October, surpassing VW's 6,370.

Down was up in terms of domestic market share for GM. The biggest of the Big Three edged to 54.50 percent from 54.39 percent, in spite of its 13.20-percent sales decline. Ford tumbled to 23.31 percent from 27.85 percent.

Chrysler advanced more than three percentage points, to 16.51 percent from 13.18 percent. AMC fell to 1.66 percent from 2.04 percent. Honda earned 1.79 percent, down from 1.93 percent. VW was up to 1.07 percent from 0.61 percent, and Nissan had 1.16 percent.

Only five domestic makes reported October sales increases: Plymouth was up 6.72 percent, Chrysler was up 19.15 percent, Dodge was up 0.54 percent, Pontiac was up 9.18 percent and VW was up 51.31 percent.

Ford was off 25.58 percent, Mercury was down 36.67 percent and Lincoln dropped 4.46 percent. Buick tumbled 33.79 percent, Cadillac was off 26.24 percent, Chevrolet dropped 10.45 percent and Oldsmobile was down 5.59 percent. At American Motors, AMC Eagles were down 36.76 percent and Renault was down 28.69 percent.

Honda sales were off 19.51 percent for domestics, although the combined domestic-import figure of 53,250 was up 9.88 percent from 48,460 a year earlier. Honda imports were up 20.99 percent in October, to 42,559 from 35,177.

The import total was sprinkled with records for the month including new highs for BMW, Jaguar, Saab, Subaru, Toyota and Volvo. BMW was up 25.70 percent, Jaguar was up 72.64 percent, Mazda was up 34.44 percent, Mitsubishi was up 18.35 percent and Nissan was up 6.23 percent.

Porsche reported a 38.33-percent sales increase, Saab was up 4.07 percent, Subaru was up 33.28 percent, Toyota was up 21.63 percent, Volkswagen imports doubled year to year and Volvo was up 19.53 percent.

Not only did imports claim a record share of the market for October, luxury cars upstaged standards in the month's market-class breakout. Imports represented 30.79 percent, intermediates had 25.15 percent, compacts had 14.80 percent, subcompacts had 13.56 percent, luxuries had 9.05 percent and standard-size domestics finished with 6.65 percent.

• A year earlier, imports accounted for 23.57 percent, intermediates had 25.89 percent, compacts had 16.43 percent, subcompacts had 13.54 percent, standards were at 11.31 percent and luxury models had 9.26 percent.

Excluding the import factor, this year's October market was comprised of 36.33 percent intermediates, 21.38 percent compacts, 19.60 percent subcompacts, 13.08 percent luxury models and 9.61 percent standards.

There were 27 selling days in the month both years, yielding a daily rate of 22,163 this year compared with 25,539 in 1984.

The final period in October saw domestic sales droop 4.49 percent, to 233,671 from 244,659. With 10 selling days this year versus nine in 1984, the daily-rate average was down 14.04 percent, to 23,367 from 27,184.

GM was up 0.52 percent. Ford was off 17.86 percent. Chrysler was up 0.14 percent. AMC dropped 27.03 percent. VW was up 67.91 percent, Honda was down 40.56 percent and Nissan reported first-year sales of 3,099 units.

GM's share of the late-October market was 55.66 percent, Ford had 23.41 percent, Chrysler earned 14.55 percent, AMC had 1.96 percent, VW's share was 1.46 percent, Honda had 1.63 percent and Nissan earned 1.33 percent.

Ford Aerospace gets $366 million Air Force pact

Ford Aerospace and Communications Corp. has won a $366 million contract with the U.S. Air Force to carry out its Satellite Control Facility network support program.

The Satellite Control Facility, which consists of seven tracking stations situated around the world, provides support for Defense Department satellite programs.

The pact includes a one-year $64.4 million contract with four one-year options covering maintenance, training and logistics support. The estimated five-year worth of the contract is $366 million.

Besides operating remote sites, Ford Aerospace will provide logistics, support and management services for the Air Force under terms of the new pact. The Ford subsidiary will also provide collateral satellite support functions to the Air Force's satellite test center in Sunnyvale, Calif., and other Satellite Control Facility locations.

Week's output tops 180,000—first time since May

October auto build best in six years

By Kathy Boyer
Detroit Reporter

Despite the strike at Chrysler Corp., last month's domestic production of 760,917 cars was the best October build since 1979's 783,843.

October's output was also the highest since May, when 779,942 cars were assembled.

Last month's total was up 19.45 percent from September's 637,004 and was 8.44 percent better than the year-ago month's 701,686.

Last week's estimated auto production topped 180,000 units for the first time in more than five months.

The target of 180,646 cars was the best output since the week ended May 18, when 181,995 cars were built.

Last week's scheduled production was 4.52 percent more than the previous week's 172,835 and was 9.38 percent above the year-ago week's 165,151.

So far this year, 7,193,547 units have been assembled, 5.14 percent more than the 6,842,073 completed last year at this point.

Companies accounted for last week's scheduled production as follows: General Motors, 56.88 percent; Ford Motor Co., 21.03 percent; Chrysler Corp., 15.89 percent; Honda of America Mfg. Co., 1.55 percent; American Motors, 1.52 percent; Volkswagen of America, 1.30 percent; New United Motor Mfg., Inc., 1.05 percent, and Nissan Motor Mfg. Co., U.S.A., 0.78 percent.

Ford's Chicago plant ended production of the Ford LTD and Mercury Marquis Friday (Nov. 8).

During the next several months, the plant will be converted to produce the Ford Taurus and Mercury Sable. Those models are also being built in Atlanta.

Chrysler workers at the St. Louis No. 2 plant began striking last Monday (Nov. 4) over local working conditions and had not returned to work at presstime.

Saturday (Nov. 9) overtime was scheduled at GM plants in Lakewood, Ga.; Tarrytown, N.Y.; Leeds, Mo.; Orion Township, Mich., and Wentzville, Mo.

Ford has daily overtime slated this week (Nov. 11) at the following plants: Chicago; Dearborn; Edison, N.J.; Kansas City; Lorain, O.; Wayne, Mich., and Wixom, Mich.

Chrysler's Belvidere, Ill.; Jefferson (Detroit), and Newark, Del., plants were scheduled for Saturday overtime.

Daily overtime is slated this week at the following Chrysler plants: Belvidere; Newark; Jefferson; St. Louis No. 1, and Sterling Heights, Mich.

October output highest since '78 for U.S. trucks

Soaring to 341,249, domestic truck makers' October output was the highest for that month since 1978, when 364,473 trucks were assembled.

Last month's output was the best of any month since March, 1979, when 358,126 trucks were built.

October production was 17.27 percent more than September's 290,990 and was 16.08 percent above the 293,965 units completed in October, 1984.

Last week's scheduled production of 70,429 trucks was 1.19 percent more than the previous week's 69,602 and was slightly above (0.37 percent) the year-ago week's 70,166.

So far this year, 2,865,044 trucks have been assembled, 5.20 percent more than the 2,723,498 built last year at this point.

General Motors' St. Louis plant was scheduled for overtime Saturday (Nov. 9).

Daily overtime is slated this week at these Ford Motor Co. plants: Lorain, O.; Kansas City; Louisville; Wayne, Mich., and Norfolk.

Saturday (Nov. 16) overtime is scheduled at Ford's Lorain plant.

Chrysler Corp.'s plant in Warren, Mich., worked overtime Saturday (Nov. 9).

The Warren plant is also slated for daily overtime this week (Nov. 11).

GM announces three recalls covering 5,550 cars, trucks

DETROIT.—General Motors announced three small-volume recalls involving light- and heavy-duty trucks and the Chevrolet Celebrity. Altogether, 5,550 vehicles are involved. The company said it knows of no accidents or injuries resulting from the conditions that prompted the recall. The three recalls:

1. GMC Astro tractors from model years 1983 through 1985 with the tractor-trailer option (RQ3). GM said the rear air brake release time may be slightly greater than that required by government safety standards. About 4,870 tractors will be recalled.

2. Chevrolet and GMC P-30/35 light trucks, model years 1982 through 1985, with 6.2-liter diesel engines, four-speed manual transmissions and 4.56 rear-axle ratios. GM said the engine fan blade assembly may stress and break apart while the engine is running. About 380 trucks are involved.

3. Chevrolet Celebritys, 1985 model year, with manual transmission. GM said the clutch cable may have been improperly installed on about 300 cars. If the cable rubs against a brake pipe, the cable could wear through the pipe causing a loss of brake fluid in one portion of the dual braking system.

Celebrating silver

INDIANOLA, Ia.—Don F. Lentz has received a 25-year-dealer award from Chevrolet.

Canadian cars post best October in 10 years

October output of 107,891 cars in Canada was the best for that month since 1975 when 109,653 units were assembled.

Last month's build was also higher than any month's since November, 1983, when 115,428 cars were completed.

October's total was 17.90 percent more than September's 91,513 and 33.88 percent above the 80,585 built in October, 1984.

Last week's estimated production of 25,194 cars was 2.53 percent more than the previous week's 24,573 and 14.32 percent above the year-ago week's 22,038.

So far this year, 930,090 cars have been assembled, 2.29 percent more than the 909,281 completed last year at this point.

Despite the strike at Chrysler Corp., the truck makers' October total of 67,031 was down only slightly (0.36 percent) from the year-ago month's 67,276.

But last month's truck output fell 7.71 percent from the 72,633 units built in September.

Estimated truck production of 17,717 last week dipped 0.54 percent from the previous week's 17,814 but was 19.39 percent more than the year-ago week's 14,839.

The 1985 aggregate remains slightly ahead of last year's total at this point.

Year-to-date, 704,047 trucks have been built, 0.83 percent above the 698,279 completed last year at this time.

American Motors' Brampton (Ont.) plant was closed last week (Nov. 4) for inventory adjustment. Production at Brampton is scheduled to resume today (Nov. 11).

60th year—$45 per year, $1.00 per copy

G.D. Crain, 1885-1973.

Crain fund makes grants to 4 schools

To commemorate the 100th anniversary of the birth of founder G.D. Crain Jr., Crain Communications, Inc., publisher of Automotive News, has announced grants by the G.D. Crain Jr. Foundation to four universities to foster broader education in the areas of journalism, advertising and marketing.

Mr. Crain died in 1973. His centennial is being celebrated today (Nov. 18). He founded what is now Crain Communications in Chicago in 1916 with three employes.

The company now employs more than 1,000 persons in its offices in Chicago, New York, Detroit, Los Angeles, Cleveland, Akron, Reno, Dallas, Washington, London and Tokyo. It publishes 26 trade, business and consumer publications and supplies a variety of other business services.

The Medill School of Journalism of Northwestern University is the recipient of a grant of $25,000. Income from the grant will be used for the G.D. Crain Jr. Award each year to the outstanding student in the school's new management training program, designed to teach the special skills required for publication management.

A similar grant of $25,000 goes to the advertising division of the University of Illinois College of Communications at Urbana, to continue the long-standing support of the Crain Fellow designated by the school in connection with its administration of the James Webb Young Fund.

A third award of $25,000 is given to DePauw University, Greencastle, Ind., for an annual G.D. Crain Jr. Award to an outstanding student in the university's newly organized Center for Contemporary Media.

A fourth grant of $25,000 is marked for Northwood Institute, Midland, Mich., to provide funding for an annual G.D. Crain Jr. Award to an outstanding student in the college's Automotive Mar-

Domestic dealer total declines; loss is 149 for '85 model year

By John K. Teahen Jr.
Managing Editor

Sales were good, if not great. The economic climate was favorable. But the number of dealerships handling U.S.-built makes of passenger cars declined during the 1985 model year.

The latest Automotive News census found 20,714 outlets for domestic cars on Oct. 1, down 149 from the 20,863 in operation when the season began a year earlier.

The slip compared with a gain of 46 dealerships in the 1984 model year. It was more serious than the downturn of 80 in the 1983 model year, but far less than the tremendous drops of 1,267 in 1982, 758 in 1981 and 1,643 in 1980.

Every maker except Chrysler Corp. shared in the 1985 loss. Chrysler showed a gain of 32 outlets for the model year. Ford Motor Co. held steady with a dip of only three.

Elsewhere, there were declines of 110 for General Motors, 53 for American Motors-Renault and 19 for Volkswagen. A change in the number of intercorporate duals put the industry's dip at 149 establishments.

All figures in this article and in the accompanying tables refer to the net change in the dealership population, both for the individual corporations and car lines and for the domestic industry as a whole.

The 1985 model year started well from a standpoint of dealership stability, but the picture changed as the year progressed.

In the fourth quarter of 1984 (the first three months of the 1985 model year), the domestic industry witnessed an increase of 39 outlets. That was just about wiped out in the next quarter with a dip of 38. The final two quarters of the model year brought drops of 77 and 73, respectively.

As those figures show, there was a downturn for the first nine months of the calendar year. It amounted to 188 outlets.

A look at franchise totals for the 1985 model year finds an even split—seven makes were up and seven were down. All three of the Chrysler Corp. makes registered increases as did two of the three Ford Motor entries.

Plymouth led the way with the addition of 50 franchises. Dodge was a step behind with an ad-

GM wins fleet-subsidy lawsuit; U.S. court calls program legal

By Jake Kelderman
Washington Reporter

WASHINGTON.—The U.S. District Court in New Hampshire has held that General Motors' subsidy program on fleet sales is not illegal under state franchise laws.

The summary judgment was rendered in a case brought by 12 dealers and their state association against GM. The case marked the first time the controversial practice has been challenged in state court.

The decision is a blow to the New Hampshire dealers, but it is a bigger blow to dealers nationwide because it undercuts their efforts to get legislation passed in Congress that would eliminate fleet subsidies.

Last week, NADA's measure to make fleet/lease subsidies illegal was reintroduced in Congress.

Through its legal defense fund, NADA had supported the challenge to the practice in New Hampshire.

The dealers in New Hampshire, and nationwide, maintain that fleet incentives result in a two-tier pricing system which leaves them at a distinct disadvantage in the marketplace.

They argue that they not only pay higher prices for the cars they receive but also support an infrastructure to maintain those cars, while fleet operators have no such support operation and, indeed, count on franchised dealers to handle warranty repairs on their fleet vehicles.

In its decision, however, the court noted that fleet incentives are available to any dealer who wishes to participate in large-volume sales and that, as such, they are not discriminatory, as the dealers alleged.

"Had any of these dealers expressed an interest in participat-

Auto pact with U.S. is sought by Mexico

By Richard Johnson
Detroit Reporter

The Mexican Government has informally proposed an automotive trade agreement with the U.S., Automotive News has learned.

The Mexican Commerce Ministry raised the issue of an auto pact last summer, prompting U.S. trade officials to survey American auto manufacturers. However, it is not clear what form such an agreement would take and discussions have so far picked up little momentum.

"There have been some very informal talks," said John Rosenbaum, of the U.S. Trade Representative's office. "The Mexicans suggested that we ought to have some kind of auto agreement.

The proposed pact apparently would not mirror the existing U.S.-Canada auto pact, which basically allows the duty-free treatment of most automotive products shipped between the two countries.

"We asked the American manufacturer representatives in Washington what they thought of the idea, and I was asked to find out what the Mexicans had in mind," Rosenbaum said. "I asked if they wanted a Canada-like agreement, and they said no."

Beyond that, he said, the Mexican Commerce Ministry had not outlined a formal proposal.

The Mexican Government has indicated "some interest in sitting down with the U.S. and discussing a long-term trade relationship," said Stephen Collins, MVMA director of international affairs. "The initial inquiries have been very preliminary; there has been nothing specific.

"The U.S has said give us some formal presentation," said Collins "I would suspect Mexico wants to insure its access to the American market. The preliminary inquiries would seem to indicate some concern about being left out."

Overall trade talks with Mexico would fit in with the U.S. Government's growing willingness to negotiate bilaterally with other countries. The Reagan Administration has announced that it is prepared to begin negotiations early next year on liberalizing trade with Canada. The matter still awaits congressional approval, but it is believed to have

Maserati marriage

Chrysler's new 'Q-Coupe' unvieled

Styling for Chrysler's 1987 luxury two-seater, the result of a joint venture between Chrysler and Italy's Maserati, indicates a car more for the carriage trade than the hard-core sports car crowd. Powered by a choice of two Chrysler-based engines, the convertible with removable hard top is expected to be priced in the mid-$20,000 range. Story on Page 2.

GM rejects Enasa, talks with BL

MADRID.—General Motors has pulled back from its planned acquisition of Spanish truck maker Enasa. The company, owned by the state holding group Ini, may now be sold to Toyota. Meanwhile, GM, whose approach to West Germany's MAN concern was spurned, is discussing the future with BL's Leyland Vehicles.

Mazda eyes South African pullout

TOKYO.—Mazda Motor Co. may suspend car production in South Africa or withdraw completely from the country because of the sharp decline in output resulting from the political unrest there. Mazda had reached a monthly output of about 4,000. However, since last spring, monthly production

Company's '86 boost climbs to average of $550 on all models

GM luxury-car prices up 15 pct.

By John K. Teahen Jr.
Managing Editor

General Motors reached for the stratosphere—and attained it—as the company priced its 1986 luxury cars last week.

The five models wear stickers that are an average of $2,915, or 15 percent, higher than those on the 1985 cars.

And GM's overall increase on 1986 models also moved up considerably.

When the corporation priced the bulk of its 1986 cars on Aug. 30, it refused to put a dollar figure on the increase. Automotive News computed that hike at $400. Folding in the luxury cars and the Buick LeSabre and Oldsmobile Delta 88, which also were omitted from the earlier figure, the average price boost on GM's 1986 cars is estimated at $550 above comparably equipped models.

That figure will not be received favorably on the fourteenth floor of the stone fortress that is home to Roger B., F. James and their associates. At the General Motors Building, the party line is: These are new cars. They are not part of the year-to-year price increase.

The increases on the luxury cars ranged from $2,284 to $3,582. Here's the rundown: The 1986 Oldsmobile Toronado is $19,418, up $2,284 or 13.3 percent from 1985.

The Buick Riviera is $19,831, up $2,787 or 16.4 percent. The Riviera T Type is $21,577, up $3,582 or 19.9 percent.

The Cadillac Eldorado is $24,251, up $2,896 or 13.6 percent.

The Cadillac Seville is $26,756, up $3,027 or 12.8 percent.

The new models have equipment that wasn't included or wasn't available on the 1985 cars. There is a much greater use of electronics. Buick, for example, mentioned a Graphic Control Center on the new Riviera. Buick said it replaces about 91 controls required in conventional systems to operate air conditioning, sound systems, a trip monitor and gauges.

There isn't much change in the usual niceties of luxury cars—power assists and comfort and convenience items. They were already standard on those models.

The cars have been redesigned and downsized for 1986. They are considerably smaller, although GM says interior dimensions of the 1985 models have been retained.

Wheelbase has been reduced six inches, and overall length has been slashed 16 to 19 inches. Curb weight of most models has been cut some 400 pounds.

Another change: Riviera and Toronado have a V-6 engine, replacing the V-8 in the 1985 models. The V-6 is a powerful and sophisticated power plant, but it may not please those who insist that a luxury car should have a V-8 under the hood.

It will be a while before the market renders a judgment on the 1986 Riviera, Toronado, Eldorado and Seville.

As of introduction day (Nov. 14), 4,700 of them had been built at the new Detroit-Hamtramck assembly plant (the only source), but 2,700 of them were still at the plant awaiting various fixes.

So there were only 2,000 in the showrooms. Oldsmobile has 3,200 dealers, Buick has 2,955 and Cadillac has 1,610. Even if no dealer received more than one car, 75 percent of the three divisions' dealers had none to sell.

Matt DeLorenzo

The Ford in our future—via Korea

This prototype of the Ford Festiva minicar, which is smaller than the Escort, was on display at the Tokyo Auto Show. Designed by Mazda (25 percent Ford-owned), the car will be built in Korea by Kia, a company that is 10 percent owned by Mazda. The Festiva will go on sale here in 1988.

Chrysler going outside on specialty models

By Dan McCosh
Detroit Reporter

Chrysler Corp.'s latest strategy on small-volume specialty cars means that much of the development work and even production will be going to outside suppliers, according to Donald P. Morrisey, general manager of Chrysler's new Special Vehicle Management department.

It's a tactic that has been evolving for several years, most noticeably with the joint Chrysler-Maserati production of the upcoming 1987 "Q-Coupe," a two-passenger luxury sporty car.

Photo on Page 1

More recently, Shelby American Corp., which has developed several specialty cars for Chrysler, formed a separate company intended to develop and manufacture other Chrysler specialty cars in California.

"We're not huge, but we're quick," Morrisey said of his 24-man team of Chrysler development engineers.

The sparse group currently supervises the existing Chrysler-Shelby projects, such as the GLH turbo, and handles liaison with Maserati. Chrysler's internal group is big enough only to supervise and conceive new programs, Morrisey said. Design, development and manufacturing will be done mainly by outside companies.

Morrisey cited several reasons for outsourcing low-volume programs.

"One is the time element," he said. "With fewer people, it's faster. The other is that an independent program doesn't interfere with mainstream, high-volume activities. Also, we sometimes can take a different approach to manufacturing, possibly making a car at lower cost."

Chrysler's planned specialty-car projects could mean significant volume for independents such as Shelby and Maserati. The Maserati program is expected to yield two or three cars, while Chrysler's high-output turbo Lancer, due in 1987, also will be done outside.

The latter involves body modifications, an engine with 225-plus HP and engine and transaxle supplied by West Germany's Getrag.

"We're going to do top-of-the-line image cars, modify some vehicles and do limited volumes of production," Morrisey said.

Dismal October sales hike domestic count

Car supply grows to 65 days

By Kathleen Hamilton
Assistant Managing Editor

The stockpile of domestic cars at dealerships and factories got back to normal after the tremendously effective 1985-model cleanup, but industry sales were so slow last month that the Nov. 1 days-supply figure became uncomfortably high.

There were 1,433,567 new domestic cars in stock and in transit on Nov. 1, up considerably from the 1,242,071 of a month earlier but in the same ballpark as the rest of the year. (On Nov. 1, 1984, there were 1,296,182 cars in stock, but the number jumped to the 1.4-million range the following month and hovered between there and 1.6 million until Oct. 1, 1985.)

The uncomfortable part about this month's opening inventory comes when the stockpile is divided by the dismal daily selling rate for October. It means a 65-day supply, the highest since the haulers went on strike and cars piled up in factory lots throughout the land.

On Oct. 1, there was an unusually low 36-day supply; on Nov. 1 one year ago, the number was 51 days. That was just about where the domestic industry likes to see its stocks.

To some extent, the makers deserved the numbers they got this month: Ford Motor Co., Honda, Nissan, Volkswagen and especially General Motors upped their production during the month.

The accompanying table shows days-supply figures for individual lines doubling and even trebling with regularity.

Only three lines decreased their days-supply figures: Caravelle, thanks in large part to a big production decrease; Corvette, despite a production increase, and the new Toronado, although its production is still too low to make any significant impact.

Every market segment turned in higher days-supply figures for the month. The inventory was split this way by segments on Nov. 1: Subcompact, 17.09 percent; compact, 21.54 percent; intermediate, 37.91 percent; standard, 11.36 percent, and luxury, 12.10 percent.

On Oct. 1 the shares were: Subcompact, 18.34 percent; compact, 21.03 percent; intermediate, 35.89 percent; standard, 11.11 percent, and luxury, 13.63 percent.

By company, the latest stockpile was shared: GM, 61.59 percent; Ford, 20.28 percent; Chrysler Corp., 13.63 percent; American Motors, 2.86 percent; VW, 1.18 percent; Nissan, 0.27 percent, and Honda, 0.19 percent. (All figures in this story refer to domestically produced autos only.)

On Oct. 1, the split was: GM, 57.70 percent; Ford, 19.95 percent; Chrysler, 17.32 percent; AMC, 3.30 percent; VW, 1.19 percent; Nissan, 0.33 percent, and Honda, 0.21 percent.

Following are the cars by size class and their days-supply figures.

Subcompact—Encore, 141; Nova, 112; Fiero, 102; Alliance, 101; EXP, 96; Laser, 85; Daytona,

Bankruptcy, lawsuit and dealer losses

Novel car-finance program faces problems

By Jake Kelderman
Washington Reporter

WASHINGTON.—What began as a novel and highly successful approach to making new and used-car financing available to consumers who might not otherwise qualify has landed nearly 1,000 car dealers across the country in a financial mess.

The company that originated the program is in bankruptcy court, and a major U.S. insurance company is faced with a $20-million lawsuit.

Early in 1982, PAL Auto Corp., Indianapolis, a subsidiary of Disc Cos., a dealer services business, developed what it called a "Hedge-Option" plan.

For a set fee to the dealer, it would assume the financing risk on new and used cars sold to consumers who might fail to qualify with conventional financing sources.

Typically, the dealers' fee would amount to a fixed percentage of the amount financed (3 percent on a 24-month loan, 6 percent on a 60-month loan) and was used in part to cover losses incurred because of repossessions.

Strictly a cash-flow business, PAL carried a policy with Home Insurance to cover a portion of any losses it might suffer on a repossession and, allegedly, all exposure under Hedge Options written should it cease to exist.

The arrangement worked beautifully for the first few years with PAL signing up some 1,800 auto dealers nationwide and writing more than 100,000 Hedge Options. But last spring, the bottom started to fall out.

Home Insurance, perhaps because it, like the rest of the casualty insurance business, had been battered by heavy losses in 1984 (Automotive News, July 8-15-22), raised Pal's premium to a level the "brokerage" company said it could not pay and still remain profitable.

According to PAL, Home Insurance then also began to "delay and reject" claims submitted by PAL, leading first to a cash-flow difficulty and eventually to the need to file for Chapter 11 protection.

"We tried to get a new insurance carrier and cover claims from our reserve fund, but insurance offered by other companies was no better and our reserve fund was not inexhaustable," said John Kidwell, PAL executive vice president.

Kidwell said Home Insurance still owes PAL for 700 claims it has already paid to dealers and that there are 800 to 900 outstanding repossessions it (PAL) has yet to process.

At an average of $7,000 exposure to the dealer holding the Hedge Option, that is approximately $5.5 million to $6.3 million in outstanding claims, he said.

Michael Jeffrey, Indianapolis branch manager for Home Insurance, said his company was still processing PAL claims but was unsure as to whether it is paying them.

"We are holding some checks because we haven't determined whom they go to," he said. Jeffrey said he could not comment on any other aspect of the PAL situation.

According to several dealers who signed up with PAL, they were under the impression that if PAL should cease to exist, Home Insurance would cover their claims under the Hedge Option.

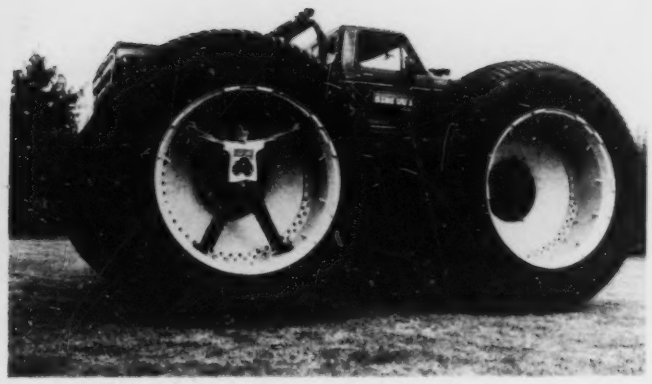
But, according to Michael Kirby, of the Indiana Department of Insurance, "This is not clear in the policy between Home and PAL." Kirby said his department had a "formal investigation" under way.

Meanwhile, PAL has sued Home insurance for $20 million alleging a breach of contract by the insurance company.

Meanwhile, the dealers who signed on for the Hedge Option plan are trying to organize a unified front to protect themselves. Approximately 1,500 of them (about 1,000 of whom have claims against PAL) still have "exposure" under the Hedge Option plan with some carrying as much as $1 million in potential liability.

According to several who wished to remain anonymous, they hope to get all the dealers together and file claims against PAL and Home Insurance as one entity, hopefully by December.

Said a Maryland dealer, "This program helped me sell a good many more cars last year; its really a shame its ended."



San Francisco show to feature Bigfoot

Ford Motor Co. will feature Bigfoot as part of its display at the San Francisco International Auto Show at Moscone Center, Nov. 28-Dec. 8. Bigfoot boasts a Ford 460 engine bored out to 472 cubic inches with electric high-volume fuel pumps and two Predator racing carburetors atop a 671 Hampton Blower. Built without blueprints by trial and error, Bigfoot utilizes a series of tires including the new 120x48x68 10-foot Tundra Tires that weigh approximately 2,500 pounds each.

CAFE rollback challenged by California, 4 big cities

By Helen Kahn
Washington Bureau Chief

WASHINGTON.—A coalition of consumer and environmental groups has sued the government in an effort to overturn the one-year rollback in the 1986 CAFE standard for passenger cars.

They are being joined by the state of California and the cities of Los Angeles, New York, Chicago and Boston. The urban areas are among those which currently cannot attain the required ambient air quality standard mandated for 1987.

California and the four cities are challenging the CAFE rollback on grounds of increased air pollution caused in part by the extra 1.5 billion gallons of fuel that will be consumed.

NHTSA has reduced the 1986 passenger-car CAFE to 26 MPG from 27.5 MPG.

The Center for Auto Safety, Ralph Nader's Public Citizen, the Union of Concerned Scientists and the Environmental Policy Institute, going to court as promised, contend that the alleged shift in consumer demand is not a legally acceptable reason for lowering the 27.5-MPG fuel-economy standard.

Instead, they say, Congress intended the standards to force the auto makers to sell fuel-efficient cars, not to accede the the manufacturers' desires to sell fuel-inefficient cars.

The second argument used by the Center for Auto Safety is that NHTSA illegally set the standard at 26.0 MPG although both General Motors and Ford Motor Co. acknowledged that they could reach 26.3 MPG. The law requires setting the standard at the "maximum feasible level."

The Automobile Importers of America, while not formally filing a petition, did request relief for its European members—Jaguar, BMW, Volvo, Saab, Peugeot and Porsche. Mercedes-Benz, whose fuel-economy numbers indicate it needs relief as much as anyone, did nothing. The rollback has been vigorously opposed by Chrysler Corp.

Joan Claybrook, now president of Public Citizen and head of NHTSA in the Carter Administration, said that rolling back the standard "makes no sense" since both GM and Ford can make fuel-efficient cars far exceeding 27.5 MPG . . ."

Clarence Ditlow III, director of CAS, said Ford and GM can offer incentives to get consumers to buy fuel-efficient cars but have decided they want to sell "vehicles which are more profitable, but less fuel efficient, and NHTSA is making it possible for them to do it without paying the penalties they would otherwise have to pay."

He added: "If fuel-economy standards can be relaxed whenever GM and Ford find them inconvenient, gasoline consumption will rise and the public will be more vulnerable to any price hikes or cutbacks in imported oil."

The other petitions for review filed in the U.S. Court of Appeals for the District of Columbia claim the rollback of the CAFE standard will increase air pollution.

The position taken by New York

Mazda plans to hike its work with Ford

By Francis J. Gawronski
Tokyo Bureau Chief

OSAKA, Japan.—Now that Ford Motor Co. has been taken off the Arab League's boycott list, Mazda Motor Co. has indicated that it will strengthen and, in some cases, expand working agreements with its U.S. automotive partner. Ford owns 23.8 percent of Mazda.

According to Moriyuki Watanabe, Mazda chairman, Mazda will move to promote and exchange technological tieups with Ford and eventually to produce automobiles in Europe with Ford of Europe, Inc.

Because of the glut of cars being produced in Europe at present, Watanabe dismissed the possibility of immediate joint production with Ford of Europe.

However, at his quarterly press conference, Watanabe indicated that the joint production project could materialize sometime after Mazda begins production at its plant in Flat Rock, Mich., in 1987.

Watanabe said competition is intensifying in Europe but auto makers there will eventually be integrated. He said that joint production with Ford could help the European auto industry restructure itself.

A venture with Ford of Europe, Watanabe said, will be one of Mazda's largest-scale projects after U.S. production starts in 1987.

He said Mazda will "positively" promote technological exchanges with Ford in the U.S. The tieup should center on Ford's advanced technology in such areas as materials and electronics-related components, including engine control systems, he added.

Mazda has been reluctant to

Saab looks to Norway as assembly-plant site

By Knut Moberg
Staff Correspondent

OSLO, Norway.—Saab will consider construction of a Norwegian car plant if it believes the long-term demand for its cars is going to outrun the new capacity in Sweden.

Georg Karnsund, president of Saab-Scania, has confirmed that discussions with the authorities in Norway have started. But other company officials stress that no decision has been made to go beyond the 150,000 annual output planned for 1988.

They also point out that Saab has been presented with two similar expansion possibilities by the town of Arlov, near Malmo, where it already has an assembly plant.

What is certain is that any volume development plans for the late 1980s will not embrace Trollhattan, where Saab's main production is located. Trollhattan is bursting at the seams following the construction of a new paint plant recently. That lifted the company's capacity from around 100,000 to the 150,000 that is planned for three years hence.

Another factor is the start of construction of Volvo's new car factory at Uddevalla, only 14 miles from Trollhattan. It will make it even more difficult for Saab to recruit skilled workers when it opens toward the end of 1987, initially with a single-shift capacity of 40,000 annually.

The other long-term choice for Saab is to stay at the 150,000 level. It may decide that a period of consolidation is required following a doubling of volume during the past decade.

This year, it expects to produce a record 112,000. The majority (60,000) will emerge from Trollhattan, and the remainder from Arlov (18,000) and the Finnish factory at Uusikaupunki (34,000).

A decisive factor in the development of the company's long-term needs will be what happens in the U.S., where one-third of its volume is sold. All research that Saab has seen indicates continued strong growth for cars in the 2.8-liter to 3.0-liter luxury range—precisely where the 900 and 9000 are pitched.

This year's U.S. sales are expected to approach 40,000. Next year's target is around 45,000, and the expectation is that by the end of the decade Saab could be shipping 60,000 cars a year to the U.S.

"There is no reason why we could not become a 100,000-a-year importer in the U.S. in the 1990s," a Saab executive speculates.

When those kinds of projections are added to the developments the company anticipates in mainland Europe, 150,000 begins to seem an inadequate number. Saab is putting a lot of investment and effort into dealer development, particularly in West Germany and France, where it has been weak. This, and the (late) arrival on the market of the new 9000, are expected to form the basis of a renewed European sales effort.

Certainly a lot of credence is being given in Norway to Karnsund's remarks. Sources indicate a location, output and employment level have been established for any new factory. It would be at Ostfold, about four hours by road from Trollhattan, produce 40,000

Porsche buying out its three distributors

By John A. Russell
New York Staff Writer

NEW YORK.—Porsche Cars of North America will assume all distribution of its cars in the U.S. effective Jan. 1 and is now working out financial arrangements with the three independent distributors who supplied 12 states. The total cost to PCNA is not known.

John A. Cook, PCNA president, said that last year, when PCNA assumed responsibility for the importing, marketing and distribution of Porsche cars in the U.S., agreements were made with the three distributors to provide services to PCNA for a period of time.

Also, under those agreements, PCNA could assume the distribution responsibility at any time in the 12 states.

The company decided to exercise its option effective Jan. 1.

The agreements with the independent distributors came about as part of the German maker's decision to part company with Volkswagen of America last year and market its product on its own. The distributors are the last remaining VW independents. They went to court but reached out-of-court agreements with PCNA though the exact terms of those agreements were not made public.

According to reports at the time, the three distributors accounted for 22 percent of Porsche's wholesale business in the U.S.

The distributors are World-Wide Volkswagen Corp., which has rights to Connecticut, New Jersey and New York; Porsche Audi Northwest, Inc., which has the rights to Alaska, Idaho, Montana, Oregon and Washington, and, Volkswagen Mid-America, which distributes in Arkansas, Kansas, Missouri and Nebraska.

Under the terms of the agreements, the dealer body is contracted to PCNA.

As for the total cost to PCNA, a spokesman for the company said this was being prepared and it is based on a formula under which PCNA would have to compensate the distributors for lost net profits.

He would not speculate on the total cost.

He said all cars would go through the PCNA system, which has distribution centers points in Reno and in Charleston, S.C.

Total is lowest since 1981; VW only gainer

Early-month sales dive 22 pct.

By Jenny L. King
Detroit Reporter

Early-November domestic new-car sales can only be described as dismal. Something like the three solid weeks of rain and gray weather the Motor City has suffered.

Sales plunged 22.15 percent from the comparable year-ago level and fizzled to their lowest daily selling rate since the pre-incentive Aug. 1-10 period.

Record-setting August and September totals still help the 1985 year-to-date total keep its distance from 1984. But the first November period was the fourth consecutive downer following the good times.

New-car sales numbered 146,969 Nov. 1-10, down 22.15 percent from 188,775 the preceding year and the lowest for the period since 1981 when 142,143 sales were recorded.

The absence of one selling day this year didn't help matters. The daily rate was down to 18,371 based on eight days versus the 20,975 average from nine in 1984. It was the weakest pace since the Aug. 1-10 rate of 17,693.

On either a straight numbers or daily-rate comparison, Volkswagen was the only major U.S. maker to surpass its year-ago level. VW sales of 1,119 were up 75.67 percent from only 637 in 1984; it was a 100-percent daily-rate increase.

General Motors' passenger-car sales dropped 15.38 percent, to 87,224 from 103,075 last year (down 4.80 percent daily rate). Ford Motor Co. sales of 31,248 were down 39.89 percent from 51,988 (down 32.32 percent daily rate). Chrysler slipped 16.98 percent, to 20,895 from 25,168 (down 6.60 percent daily rate).

American Motors reported an early November sales estimate of 2,300 passenger cars, down 45.24 percent from 4,200 (down 38.26 percent daily rate). Honda sales tumbled 22.23 percent, to 2,883 from 3,707 (down 12.59 percent daily rate). Nissan reported sales of 1,300 Sentras in the period.

GM's share of the early November domestic market climbed to 59.35 percent from 54.60 percent. Ford plunged to 21.26 percent from 27.54 percent. Chrysler moved up to 14.22 percent from 13.33 percent.

AMC fell to 1.57 percent from 2.23 percent. VW had 0.76 percent this year compared with 0.34 percent in 1984. Honda earned 1.96 percent, exactly the same share as a year ago, and Nissan had 0.88 percent of this year's market.

Chevrolet, with a 2.53-percent increase, was the only GM make to better its sales year to year. Buick was down 32.10 percent, Cadillac was down 32.78 percent, Oldsmobile slipped 15.86 percent and Pontiac was off 22.81 percent.

Ford dropped 37.10 percent, Mercury plunged 51.36 percent and Lincoln was off 25.07 percent. Plymouth was down 25.08 percent, Chrysler dropped 18.61 percent and Dodge was off 8.84 percent.

AMC was down an estimated 25.00 percent, Renault slipped 47.37 percent, Honda was down 22.23 percent and VW soared 75.67 percent.

Chevrolet's Celebrity was the top-selling U.S. nameplate for the period with sales of 8,544. Ford Escort was second at 8,198, followed by Chevrolet Cavalier at 7,740, Oldsmobile Cutlass Ciera at 7,583 and Chevrolet Caprice at 5,549.

Wants exemption from gas-guzzler tax

GM seeks a break for big wagons

By Helen Kahn
Washington Bureau Chief

WASHINGTON.—General Motors is trying to get an exemption from the gas-guzzler tax for its five standard-size station wagons. It is estimated that the tax would cost GM (or its customers) some $208 million during the next four years.

The five wagons are Chevrolet Caprice Classic, Pontiac Parisienne, Oldsmobile Custom Cruiser, Buick LeSabre and Buick Electra.

Pending before the House tax-writing Ways and Means Committee is a "technical correction" proposal, designed by GM lobbyists to apply only to GM station wagons but—as is customary—not mentioning a company name.

The exact language: "The provision in the bill relating to the gas-guzzler tax would not apply to any station wagon sold by the manufacturer or producer before July 1, 1990, if the station wagon is equipped with more than 6 seat belts and is a model being produced on the date of enactment of this Act."

Those GM wagons (about 2.5 percent of GM sales in the 1984 model year) would be subject to a $500 or $650 gas guzzler tax (depending on whether they miss the 22.5-MPG guzzler limit by less than 1.0 MPG or by more than 1.0 MPG but less than 2.0 MPG) for 1986 models.

In 1978, when Congress passed the gas guzzler law, GM had the loaded-weight limit set at 6,000 pounds and the legislative intent was to exempt the GM limousine. But equally clear was Congress' intent to cover vehicles like Rolls-Royce.

Because of its atrocious gas mileage, Rolls-Royce (or perhaps its customers) has been paying the top tax—$2,650 per car this year. But Rolls discovered belatedly that it could have avoided the tax by more careful research of the DOT definition of "loaded"—curb weight plus 150 pounds per belt seating position plus a luggage allowance for each.

The Internal Revenue Service has not agreed to make refunds to Rolls-Royce, however, because of the clear legislative history of Congress' intent to cover sales of such obvious gas guzzlers as the Rolls vehicles, which still get a stately 11 or 12 MPG.

Rolls-Royce, therefore, has attempted to get its refunds through this same "technical corrections" route to the House Ways and Means Committee.

But when GM learned of the Rolls backstage operation, it decided to try for its own relief, drafting language that applies only to its production plans for its station wagons with V-8 engines.

Ford Motor Co. apparently has settled its gas-guzzler problem in another perfectly legal way, although it also was faced with guzzler taxes on its station wagons that could have amounted to more than $135 million during the next four years.

The route taken by Ford was to change the mix in its EPA weight classes—mixing cars and station wagons—and thus adjust its gas-mileage readings.

Meanwhile, this year Chrysler Corp. will be paying a $500 gas-guzzler tax on its Chrysler New Yorker (or Dodge Diplomat or Plymouth Gran Fury) with a 318-CID V-8 engine.

Both companies can point to the "spirit" of the gas guzzler law: That even though per-vehicle gas mileage is not low, the per-person transportation is—unlike Rolls-Royce and other luxury vehicles with limited passenger space.

Roll on, roll on

Timken Co. says heavy-duty truck operators are switching to roller bearings for fan clutches from double rows of ball bearings for increased durability. Timken developed bearing series for front-drive cars which allow high-production of bearings in sizes applicable to other applications, such as fan clutches.

Poster campaign promotes use of seat belts

WASHINGTON—Posters showing how seat-belt use saves lives soon will be displayed in communities across the nation as part of a program by new-car, light-truck, tire and auto service dealers to build support for state seat-belt-use laws.

Captioned Saved by the Belt, the poster features testimonials by singer/actress Barbara Mandrell, New York Gov. Mario Cuomo and others who have escaped death or serious injury because they were wearing seat belts when they were involved in traffic accidents.

On the other side of the poster is a listing of potential cost savings and the number of deaths and injuries that could be prevented by a belt-use law in each state.

The posters are being distributed free to community groups by the Dealers Safety and Mobility Council, an affiliate of the Highway Users Federation.

The poster campaign is part of a community relations program called Say Yes to Seat Belts, which also features a 13-minute audio-visual presentation and handout literature provided free to service clubs, schools and other community groups by participating dealers.

Those interested in obtaining the audio-visual presentation or the posters from a local dealer are invited to contact the Dealers Safety and Mobility Council, 1776 Massachusetts Ave. N.W., Washington, D.C. 20036; telephone (202) 857-1251.

EPA charges N.Y. firms with violating fuel rules

NEW YORK—EPA has notified 59 gasoline refiners, retailers and distributors in New York City and three New York counties that they could face a combined total of $370,000 in penalties for violating fuel regulations of the Clean Air Act.

The Department of Justice, on behalf of EPA, has also filed enforcement cases in U.S. District Court seeking more than $500,000 in penalties from four other gasoline distributors for alleged violations of the same regulations.

The gasoline distributors and vendors were charged with selling leaded gasoline as unleaded gasoline. Penalties were also proposed against some refiners because contaminated unleaded gasoline was sold at their branded stations.

The Department of Justice action is being taken against gasoline distributors who had previously been notified of alleged violations of the Clean Air Act's fuel regulations. The department is seeking $10,000 per day for each day the contaminated gasoline was sold to the public.

An EPA regional administrator said the violations hurt consumers two ways: "First, motorists are cheated by paying the higher unleaded price for leaded gasoline and, second, lead destroys the effectiveness of the car's expensive catalytic converter."

EPA routinely monitors large metropolitan areas for compliance with fuel regulations to ascertain whether non-attainment of the National Ambient Air Quality Standards is attributable to automobile pollution.

The notices of violation allow respondents to establish that they are not liable for the alleged violations. If a settlement is not reached, however, the cases are referred to the U.S. Department of Justice for prosecution.

Schneider signs for Downtown Ford

Donald Schneider signs with Ford Division for Downtown Ford, Inc., Canton, O. Witnessing are James Murphy, left, Ford Division Cleveland district sales manager, and James Lang, general manager of the dealership.

Reynolds chairman completes retirement

DAYTON—E.F. (Pat) Strasser, 64, Reynolds and Reynolds board chairman, has completed his retirement from the firm by stepping down from both the chairmanship and the board of directors.

Strasser's retirement program began in February, 1984, when he stepped down as chief executive and remained as chairman of the board and a director. He joined the company in 1956 as a forms salesman. Strasser became executive vice president in 1971, president in 1976, chief executive officer in 1977, and chairman in 1982.

U.S. court OK's program in New Hampshire suit

GM wins fleet-subsidy case

Continued from Page 1

ing in volume sales, GM would have afforded them the opportunity to seek out and sell to fleet purchasers on the same terms that were made available to other franchised dealers," the court said.

"The record shows that GM provided any interested dealer with the opportunity to compete for fleet sales on the same terms and conditions as other dealers," the court held in granting GM a summary decision in the case.

NADA Executive Vice President Frank McCarthy said the organization was "disappointed" by the ruling and that it was looking at the options available to it.

"An appeal is a likely possibility, but we will have to wait on an analysis of the decision and on what the New Hampshire dealers want to do," he said.

Don Hudler, general director of sales operations at GM, said the company was "pleased with the decision in which all the dealers' claims were dismissed and the reasonableness of GM's efforts to enforce its fleet program guidelines were upheld."

Hudler, noting that the New Hampshire ruling was a "very important" one for GM, said the company was particularly gratified that the court held for it in all three key points: That there was no discriminatory pricing; that the fleet subsidies constituted "reasonable business practice," and that the special privileges it accords certain large fleet operations do not constitute the creation of a competitive franchise.

Meanwhile, NADA has lined up some of its old allies and reintroduced legislation that would ban the fleet-subsidy practices altogether.

As previously reported by Automotive News, the new measure does not include the exemptions of the previous bill, nor does it preclude individual states from acting on their own to ban the practice.

A vocal band of dealers had insisted on the changes, and the new bill complies with their wishes that "nobody be able to buy a car cheaper than a dealer."

Signaling a new approach by the dealer group to gain support for the measure, NADA President William Symes said the bill was "aimed at preventing short-term decisions by the auto makers from causing long-term damage to the franchise system and, therefore, the consumer."

NADA estimates that approximately 1.25 million vehicles are sold under fleet subsidies each year with discounts as high as $1,000.

In other instances the auto makers offer incentives such as cash rebates, special price reductions, free options, price-protection guarantees, distant-delivery credits, guaranteed resale values, advertising assistance and special finance support.

McCarthy noted that dealers from time to time receive such subsidies too, but unlike the fleet operators, dealers are always subject to the franchise requirements.

Unlike previous efforts, NADA this year is working with fewer sponsors of its fleet-subsidy bill in the early going. On the House side: it has 17; in the Senate, only 5. Since the measure is being introduced late in the year, it is almost certain that it will not see any action until next year.

And, as in previous attempts, it does not have the support of Rep. John Dingell, Michigan Democrat.

Dingell has called the measure "bad law," and the measure must go through his committee before it can reach the House floor.

NADA is philosophical about that, however, noting that the legislative route is not necessarily the only option available to it and that in any case some wars are not won overnight.

Four universities receive grants from Crain fund

Continued from Page 1

keting Management sequence.

In addition, Crain also announced an annual grant of $5,000 to The Advertising Council, a national organization of the advertising world devoted to providing free advertising and publicity for worthy civic and philanthropic causes.

A 1985 grant of $10,000 to the National Press Foundation, Washington, to help in the establishment of a major library and information center, also was announced.

Although G.D. Crain Jr. was an unusually astute publisher, he grew up on the editorial side of journalism and always considered himself essentially an editor. His publishing philosophy was simple: Put out a useful editorial product—one essential to the audience for which it was intended—and all the rest, including circulation and advertising, would take care of itself.

On the occasion of the 40th anniversary of his founding of Advertising Age, now the company's flagship publication, Mr. Crain asserted that "I always wanted to be a publisher," but added that he regarded himself "primarily as an editor and reporter and writer."

He insisted that publications produced under his name maintain the highest journalistic standards and encouraged the development of many aspects of business-publication journalism which have subsequently become standards in the field.

A native of Kentucky and an MBA graduate of that state's Centre College, he served as city and sports editor of the old Louisville Herald while in his early teens. Subsequently, he organized a business news service which at one time serviced almost 100 business publications.

He founded his own publishing company in 1916 with Hospital Management, a magazine for hospital administrators, and followed up one month later with what is now Business Marketing, a specialized paper for business-to-business marketers.

Mr. Crain moved into the big time in publishing when, having moved to Chicago, he launched Advertising Age at the beginning of the 1930s depression. His idea for fast, effective news coverage in the general advertising and marketing field succeeded in lasting out the depression. The publication moved steadily onward until it became one of the world's premier business papers.

Under his leadership, Crain Communications grew, via startups and acquisitions—including the 1971 acquisition of Automotive News—until it reached its present status this year with the addition of Crain's New York Business and Crain's Detroit Business.

Mr. Crain was active in many publishing circles during his long career. He was one of the founders of the industry group which is now known as Assn. of Industrial Advertisers, and he was president of the National Conference of Business Paper Editors.

In 1975, he was honored posthumously by election to the Advertising Hall of Fame because of his successful efforts "to raise the standards of advertising and marketing in the U.S. and internationally."

Mr. Crain died at the age of 88 in December, 1973, but the company continues as primarily a family enterprise, with his widow Gertrude as chairman of the board, his older son Rance as president and his younger son Keith as vice chairman.

Domestic dealer total dips 149 for 1985 model year

Continued from Page 1

vance of 49, and Chrysler was up 41. Mercury reported a gain of 33 and Lincoln's total grew by 29. At GM, there were gains of five apiece for Cadillac and Oldsmobile.

On the downside in franchise totals for the 1985 model year were Chevrolet, off 60; AMC, 33; Renault, 29; Volkswagen, 19; Buick, 15; Ford, 11, and Pontiac, 10.

Chrysler Corp.'s dealership total rose in the first three quarters of the model year and showed no change in the fourth for a net gain of 32 establishments. The total was 3,994 on Oct. 1, up from 3,962 a year earlier.

The July-September standoff ended a period of 11 consecutive quarterly gains for Chrysler. But, on the other hand, the corporation has now gone 12 straight quarters without suffering a decline.

Oct. 1 franchise totals for its three makes were Chrysler, 3,037; Plymouth, 2,997, and Dodge car, 2,913.

Chrysler Corp. has four dealerships that handle only Dodge trucks. They are not counted in the corporation's car-outlet total or in the Dodge car-franchise total. The Dodge truck-franchise total, incidentally, is 2,987.

At Ford Motor Co., recent quarterly slips of 11-9-13 eclipsed a rise of 30 in the final three months of 1984, giving the company a model-year drop of three dealerships. The latest total is 5,531, compared with 5,534 a year ago.

Franchise counts on Oct. 1 were Ford car, 4,694; Mercury, 2,754, and Lincoln, 1,598.

There are 116 dealerships that handle only Ford heavy-duty trucks. They are not counted in the company's car-dealer total or in Ford Division's car-franchise total.

GM lost 20 dealers in each of the first two quarters of the model year and 35 in each of the last two quarters for a decline of 110. GM's Oct. 1 car-dealership figure was 9,875, down from 9,985 at the beginning of the model year. Including GMC truck outlets that do not handle a GM passenger car, the corporate dealer total is 10,450.

Car-franchise numbers on Oct. 1 were: Chevrolet, 5,075; Oldsmobile, 3,200; Pontiac, 3,000; Buick, 2,955, and Cadillac, 1,610.

AMC-Renault had 1,415 car dealers on Oct. 1, down 53 from 1,468 when the model year began. Quarterly slips were 3-3-23-24.

The franchise totals on Oct. 1 were 1,360 for AMC and 1,307 for Renault.

Of the 1,415 AMC-Renault outlets, 1,252 handle both makes. AMC has 733 duals with Big Three makes, and Renault is included in 90 percent of them. AMC has about 70 duals with VW (without a Big Three make in the house) and Renault is involved in half of them.

Volkswagen finished the 1985 model year with 877 dealerships, down 19 from its 986 when the season began. After a gain of three in the first quarter of the model year, there were dips of five, 10 and seven in the next three periods.

VW has an estimated 150 duals with the Big Three and/or AMC.

Prior week's was best since April

Auto production dips from high

By Kathy Boyer
Detroit Reporter

Last week's estimated domestic auto production of 174,470 units fell 4.16 percent from the previous week's 182,039.

The prior week's actual production was more than a thousand units higher than expected and was the best output since the week ended April 29, when 183,669 cars were built.

The scheduled output last week was slightly below (0.69 percent) the year-ago week's 175,684.

So far this year, 7,369,410 cars have been assembled, 5.18 percent more than the 7,006,676 completed last year at this point.

Companies accounted for last week's scheduled production as follows: General Motors, 58.10 percent; Ford Motor Co., 17.97 percent; Chrysler Corp., 16.91 percent; Honda of America Mfg. Co., 2.07 percent; American Motors, 1.58 percent; Volkswagen of America, 1.35 percent; New United Motor Mfg. Co., 1.09 percent, and Nissan Motor Mfg. Co., U.S.A., 0.93 percent.

Saturday (Nov. 16) overtime was scheduled for these GM plants: Doraville, Ga.; Oklahoma City; Janesville, Wis., and Lordstown, O.

Ford has daily overtime this week (Nov. 18) at plants in Dearborn; Edison, N.J.; Kansas City; Lorain, O.; Wayne, Mich., and Wixom, Mich.

All of those plants except Wixom are slated for Saturday (Nov. 23) overtime.

Chrysler's Belvidere (Ill.) plant was scheduled for Saturday (Nov. 16) overtime.

These Chrysler plants are slated for daily overtime this week : Belvidere; Newark, Del.; St. Louis No. 1, and Sterling Heights, Mich.

GM's Pontiac plant No. 1 was shut down Nov. 8 because of a parts shortage. Production is scheduled to resume today (Nov. 18). The plant assembles the Pontiac Fiero.

Chrysler's St. Louis No. 2 plant remains on strike over local issues. The plant produces Plymouth Gran Fury, Chrysler Fifth Avenue and Dodge Diplomat.

Ford adds 252,000 cars to Tempo-Topaz recall

WASHINGTON.—Ford Motor Co. is recalling some 252,000 more 1984-85 Tempo and Topaz cars to see if the bolt that fastens the rear suspension control arms to the rear wheel spindles needs replacing.

Ford thinks that only about one percent of the cars have the problem, but the company has received a report of an accident involving injury.

Of the cars involved, 227,000 are in the U.S., 25,000 are in Canada, and 200 were exported.

Last June, Ford recalled 289,000 Tempo and Topaz cars for the same problem. More are being added now because Ford discovered that suspect parts had not been purged from the Kansas City and Oakville assembly plants.

In addition to the Ford recall--which Ford told NHTSA it was planning on Oct.29—the NHTSA monthly defect report listed several other recalls. They included:

1. 32,400 1985 Ford F-350 pickups because fuel sender retaining nuts may fracture and allow fuel to leak or spill.

2. 12,459 Fleetwood Pace Arrow, Southwind 1985-86 motor homes because the generator exhaust tailpipe can become damaged and allow carbon monoxide fumes to enter the vehicles.

3. 3,988 1986 Ford Tempo and Topaz cars because the engine may develop or maintain a partially opened throttle.

4. 14,600 1986 Jeep Wagoneer, Cherokee and Comanche models because fuel lines may be improperly fitted.

5. 230 Jeep Grand Wagoneer, J10 and J20 models because they may contain contaminated brake fluid.

6. 294 1985 Chevrolet Celebrity autos because the clutch cable may contact the master cylinder brake pipe.

NHTSA also announced the opening of several new investigations: Front brake problems in 1983-84 GMC Astros, brake proportioning valve in 1984-85 GMC Suburbans, and loss of steering control in 1984 Tempo/Topaz.

GM, Korea firms in battery venture

SEOUL, South Korea.—General Motors has entered into a $5.7 million joint venture with two firms here to produce car batteries for export.

The venture, with the Daewoo and Hyosung groups, is to make batteries in South Korea for export beginning mid-1986.

GM's Delco Remy Division is said to have half the equity in the joint venture, with the two South Korean firms sharing the remaining equity on an equal basis.

Truck production slips 2.82 pct.; total is 69,143

Domestic truck makers' estimated production of 69,143 units last week fell 2.82 percent from the previous week's 71,151 but was 3.54 percent more than the year-ago week's 66,778.

So far this year, 2,934,909 units have been assembled, 5.17 percent more than the 2,790,645 built last year at this point.

General Motors scheduled Saturday (Nov. 16) overtime at the following plants: Janesville, Wis.; Lordstown, O., and Shreveport, La.

Ford's Kansas City; Louisville; Lorain, O.; Wayne, Mich., and Norfolk plants are slated for daily overtime this week (Nov. 18).

Saturday (Nov. 23) overtime is scheduled at Ford's Kansas City, Lorain and Louisville plants.

Chrysler Corp. scheduled Saturday (Nov. 16) overtime at its Warren (Mich.) plant. Warren is slated for daily overtime this week (Nov. 18).

Canadian makers set highest builds since May-June

Scheduled production of cars and trucks in Canada is back up to the high levels of the second quarter of this year.

Canadian auto makers estimated production of 25,604 cars last week, their best output since the week ended June 22, when 25,789 units were assembled.

Last week's build was 14.01 percent more than the previous week's 22,458 and 10.48 percent more than the year-ago week's 23,175.

So far this year, 952,958 cars have been assembled, 2.58 percent more than the 928,995 built last year at this point.

Canadian truck makers estimated production of 19,198 trucks last week.

The targeted build was the highest output since the week ended May 11 when 19,206 were assembled.

Last week's scheduled production was 7.14 percent more than the previous week's 17,918 and 2.69 percent more than the year-ago week's 18,695.

So far this year, 723,446 trucks have been built, 1.45 percent more than the 713,082 completed last year at this point.

VW retains slender lead in Europe

By Richard Feast
European Editor

LONDON.—The Volkswagen-Audi group maintained its slender lead over Fiat Auto in Europe's sales race in the third quarter.

The first-half positions were repeated in the nine-month period, but with a slight tightening of the grouping.

The major development concerned a general upturn in demand in the third quarter. At the end of September, the Western European sales total was 8,215,000, an increase of 3.7 percent over the same period one year earlier. At the end of the first half, the total of just under 5.66 million was almost identical with that of the year-earlier period.

Unofficial sales returns for the nine months put VW-Audi at 12.8 percent, Fiat Auto at 12.4 percent, Ford at 12.0 percent, General Motors (Opel-Vauxhall) at 11.5 percent, the Peugeot-Citroen group (PSA) at 11.2 percent and Renault at 10.5 percent.

One year earlier, the European Big Six were ranked: Ford, 13.1 percent; Fiat, 12.8 percent; VW, 11.8 percent; GM and PSA, 11.2 percent each, and Renault, 10.8 percent.

Japan's share rose from 10.2 percent in the first nine months of last year to 10.8 percent in the first three quarters of this year.

If VW maintains its position to the end of the year, it will be the first time it has been Number One in Europe. It has swept into the

Renault of future

21 headed for Europe, U.S.

Renault will introduce this slightly larger, higher-line replacement for its 18 model at the Geneva Auto Show in March. The front-drive four-door 21 will go on sale in Europe this summer and is slated to be exported to the U.S. by early 1988. Related story on Page 72.

Import-car stockpile sinks to 11-month low

By Kathleen Hamilton
Assistant Managing Editor

The supply of new imported cars fell to an 11-month low, opening November at a 28-day level. Increased sales during October were the main cause of the decline. The unit count on Nov. 1—276,006—was the lowest in six months.

On the other hand, sales of imported trucks fell and inventories rose, hiking the truck stockpile to 39 days' worth from last month's opener of 26 days.

For comparison purposes, there were 280,248 cars in inventory on Oct. 1, a 29-day supply. And on Nov. 1 a year ago (when Japanese quotas were stricter), the car stockpile was 186,567, a 24-day supply.

The import-pickup inventory at the start of this month was 97,597; a month earlier, it was 84,957, and a year earlier it was 87,756, a 42-day supply. All import truck figures also include Nissan's domestic models.

The decline in car inventories was most in evidence in the German column; there, BMW ran its stockpile down to about a third of what it was on Oct. 1. Mercedes-Benz inventories were lower, too. But in its case, stocks have been low for two months, and its sales are subsequently declining.

That caused an anomaly common in days-supply figures: Because inventories are divided by a smaller daily selling rate, the days-supply figure gets bigger, even though there are fewer cars in dealerships to sell.

That's exactly what happened to Mercedes this month. Its 44-day inventory is actually far from where it would like it, even though the industry usually considers such a number completely acceptable.

The big increases in days-supply figures for Volkswagen imports and especially for Merkur were caused by the opposite problem: Higher inventories, lower sales. Incentives came off the Merkur in October, no doubt contributing to the sales decline.

The average supply of Japanese cars stayed the same, but there were some individual numbers worth noting: Changes in the Chevrolet captives' supplies are due mostly to variations in shipments; both models increased their sales during October. Toyota

Bombardier eying car for Canada; talks with Daihatsu

By Richard Johnson
Detroit Reporter

Bombardier, Inc., the Montreal-based maker of military vehicles, mass-transit cars and snowmobiles, may soon join the growing list of foreign companies with plans to begin selling small passenger cars in the U.S.

The Bombardier small-car program, which is now under study, reportedly could be accomplished in partnership with minicar specialist Daihatsu Motor Co. of Japan.

"We are looking into the feasibility of possibly manufacturing a small, economical car in Quebec," said Bombardier spokesperson Helen Crevier. She would not confirm or deny the reported Daihatsu connection.

Daihatsu announced several months ago that it will begin selling vehicles in the U.S. in late 1987 through its own dealer network.

John Fukunaka, Daihatsu's team leader for U.S. products, said, "to the best of my knowledge, there have been some talks" between Bombardier and Daihatsu involving component sourcing. But he said he had no direct involvement in negotiations.

The Canadian manufacturer received a $2 million (Canadian) subsidy from the federal and provincial governments to help undertake a feasibility study on small-car production in Valcourt, P.Q.

The study, which was launched about six months ago and is due to be completed early next year, involves the technical and marketing aspects of a small, fuel-efficient car, according to Crevier. Asked whether the car might be exported to the U.S. market, she said "we're certainly looking at all possible markets."

The company reportedly has on the drawing boards a minicar code-named NCV (New Concept Vehicle), although Crevier declined to comment on specifics of the program.

"We've only recently been looking to find new products to use our capacity at Valcourt," said Crevier. "That's why we're looking at a small car."

The excess capacity results from the downward trend of the snowmobile business, which produced sales of 100,000 units annually for the company in the early 1970s. But Crevier said the entire North American snowmobile market now comes to about 100,000 units, 35-40 percent of which is held by Bombardier, the industry leader.

Crevier would not say what level of car production would be required to utilize existing capacity at Valcourt.

"We expect the (small-car) feasibility study to be done in early 1986," she said. "If we decide to go ahead, we'll have more details."

A joint venture with Bombardier would provide an all-important North American manufacturing base for Daihatsu, the smallest of Japan's nine auto makers and the only one not currently exporting to the U.S.

The company will bring its 3-cylinder, front-wheel-drive Charade model to the U.S. in late 1987. The car is about 21 inches shorter and 600 pounds lighter

breaking news

China looks to Japan

BEIJING, China.—The Chinese Government is trying to attract a Japanese maker into a joint venture to build pickup trucks here. China's recent two-year ban on most vehicle imports is forcing Japanese makers to consider production in China. Nissan Motor Co. said it was one of several Japanese firms negotiating. The joint venture would involve China's largest auto plant in Changchun. It would produce about 100,000 pickups a year.

He plans to oversee diversification until time for retirement

Iacocca elaborates on restructuring

By Dan McCosh
Detroit Reporter

Chrysler Corp. Chairman Lee A. Iacocca said he intends to stay with the company until he retires in four years at age 65—long enough to oversee a diversification strategy aimed at boosting Chrysler's non-automotive business to as high as 50 percent of its operations.

In an interview with Automotive News, Iacocca elaborated on Chrysler's recently announced plan to establish a holding company with four major operating groups.

The main purpose of the reorganization was to lay the groundwork for a major diversification program, he said, as well as ease the transition to new management when he retires.

"Looking ahead, it gives us a chance to establish more entrepreneurs (in Chrysler management)," Iacocca said.

"What is a chief executive's only role in life? It's the type of people you get and putting them to use that make or break you. We're trying to establish a transition. A time comes to everyone when he's got to move on. If he's 65 in four years, we'll see. But I intend to be here, Lord willing, through that period of time."

Iacocca's remark is the first public indication he intends to stay beyond his current contract, which runs through Dec. 8, 1987. It also further quashes speculation that he intends to run for president in 1988—an ambition he repeatedly denies. Iacocca will be 65 in October, 1989.

Diversifying Chrysler to the point where it is no longer dependent on boom-and-bust auto industry economics is likely to engage most of Iacocca's attention in the meantime.

"It would be nice to say technologies—undefined yet—or aerospace—slightly defined—would be half, and cars and trucks would be half. That makes our car and truck business stronger, because when these big black, holes come along, these down cycles when you drop 30 percent and 40 percent, you have a noncyclical, business to support your cars and trucks," Iacocca said, explaining the ambitious plan to develop non-automotive business in the future.

"Don't get me wrong. Diversifying to 50-50 would be nice—when you're a 90 percent car business today. But it would mean some large acquisitions. We don't have any large acquisitions planned. We've looked at a dozen.

"If a big one came to pass, you'd be on your way to doing that," he said. "It doesn't have to be 50 percent automotive, but it can't be 90 percent. So it might go to 80 percent and 70 percent, and it might take a decade. But that would be our overall thrust."

Iacocca said the acquisitions planned would be in fields with industrial or defense customers and that a recent record $800 million debt offering would be used partially to finance the effort.

For Chrysler to diversify to the extent described, it would have to exceed even General Motors' recent takeover of Hughes Aircraft and EDS Corp., which represented about $5.5 billion in sales at the time they were acquired.

AMC float features Toto, too

This is an artist's rendering of a storybook float which tells the tale of the Wizard of Oz. It is American Motors' entry in the 1985 Gimbels Thanksgiving Day Parade in Philadelphia. The float will feature rain and a 70-gallon pool with colorful flower gardens. Dorothy, Toto, Scarecrow, Tin Man and the Cowardly Lion will be on hand to greet parade goers. The parade's theme is Let Us Entertain You.

EPA study to be used to explore need for more emissions rules

By Helen Kahn
Washington Bureau Chief

WASHINGTON.—EPA has taken another step in evaporative hydrocarbon (HC) emissions regulation. Its comprehensive study will be used to find out whether it is the auto industry or the oil industry and service stations which will be regulated more.

So far, it looks like a shared burden. However, EPA stressed it has not yet decided on the level of regulation for each or if indeed any more regulation will be needed. It has not finished its health effects study.

Most major cities are having serious problems meeting ozone levels. After failing in 1982, they now have until 1987 to meet these standards.

Emissions from parked gasoline-fueled vehicles and from filling car tanks at gas stations are widely agreed to be the major causes of the ozone problems.

It is therefore reasonable to expect action from EPA. Moreover, time is running out: Under the Clean Air Act, states must have plans to attain proper ozone levels in place by the end of 1987.

The auto companies already installed canisters with carbon granules on their gasoline-powered vehicles to handle evaporative losses from fuel tanks and carburetors, and they do not want to add a second canister to each car.

They blame the ozone problem on changes in fuel sold in gas stations. It is more volatile than the fuel they have been using (at EPA's demand) to test their cars, they maintain.

Absolutely right, said EPA. EPA's test fuel (Indolene) with a typical Reid Vapor Pressure (RVP) of 9.0 pounds per square inch was representative of real-world fuel in the early 1970s when cars first were controlled for evaporative HC. Now the RVP of gasoline has risen as the oil companies add butane to cut costs.

EPA's testing of cars in real use shows significantly greater evaporative losses, well above the certification level, because the canisters are not big enough to handle the increased volatility (11.5 psi now).

But EPA also reported that in the real world, many carbureted vehicles cannot meet the standard even while operating on Indolene. EPA said that suggests there is possibly a design problem.

Vehicles with electronic fuel injection—now a small minority but expected to dominate by the late 1980s—pass in the real world on Indolene but "substantially exceed" the 2.0-grams-per-test limit when run on commercial gasoline.

Therefore, EPA tentatively concluded most vehicles on the road exceed the standard and will continue to do so in the future but by a smaller margin. What to do?

EPA, in a bulky and technical report, looked at various long- and short-term choices and compared them for effectiveness and cost.

It concluded that in the short term, the only choice would be to reduce the volatility of gasoline because it would take 10 years to get enough improved cars on the

Christmas gifts for very forgetful

BEVERLY HILLS, Calif.—Beverly Hills Motoring Accessories' Christmas catalog features a helpful gift for the forgetful driver and a second for the totally absent-minded:

Beep-N-Keep keychain fob beeps to locate lost keys at the clap of the hands. And then there is the Car Finder (that can be wired to Beep-N-Keep by the loved ones of the senile enthusiast). With a push of the button, the remote-control device starts car horn sounding and lights flashing.

Mazda may supervise Ford small-car output

TOKYO.—Ford Motor Co. plans to ask its partner Mazda Motor Corp. to supervise production and decide the types of small cars to be produced at Ford's Kansas City plant, according to Jiji Press, a Japanese wire service.

The plant, which produces the Ford Tempo and Mercury Topaz, is scheduled for renovation.

According to sources quoted by Jiji, Mazda may be entrusted with production and development of Ford's small cars by 1990.

In the reported plan, Mazda will produce Ford's small cars using Japanese technology and production control systems, while Ford will take responsibility for manufacturing large cars.

Ford's idea of dividing up small-car and large-car production is said to be a response to General Motors' Saturn project.

Moriyuki Watanabe, Mazda chairman, said he has heard nothing about the plan. But at a recent news conference, he hinted that Mazda may join Ford of Europe in producing cars in Europe.

Mazda has already agreed to supply engines, transaxles and other major components—together with production know-how—to Ford's plant in Mexico, which will start production next fall at an annual rate of 100,000 units. Some 70,000 of those cars will be sold in the U.S.

Combined annual sales of Mazda's completed small cars, knockdown units and those using Mazda components are said to be 600,000 units in the U.S. and Pacific countries.

Hyundai to build cars on site near Montreal

By Richard Johnson
Detroit Reporter

Hyundai Motor Co. has settled on a site near Montreal for its Canadian auto assembly plant and will seek to operate the facility under provisions of the U.S.-Canadian Automotive Trade Agreement.

The South Korean auto maker has also announced that it will build the Pony Excel front-wheel-drive subcompact at the new plant, which will be located in Bromont, about 45 miles southeast of Montreal.

The provinces of Quebec, Ontario and British Columbia waged vigorous campaigns for the plant, which Hyundai officials are now calling a $300 million (Canadian) investment. At full capacity, the plant will turn out 100,000 cars a year and employ 1,200 directly and an estimated 1,600 indirectly.

Construction of the plant is due to begin next September. Production is slated to start as early as mid-1988, and the plant is due to be at full capacity by 1990.

The facility will be built on a 400-acre parcel in Bromont. A Hyundai team from South Korea is currently at work on design of the plant.

A Hyundai Auto Canada spokeswoman said last week that the company will "attempt to achieve Auto Pact status."

To ship into Canada duty-free, the U.S.-Canada agreement requires that car makers build vehicles in Canada annually with the same total value as those they are selling in the country. The manufacturers must purchase parts in

CAMBRIDGE, Mass.—Encouraged by the success of its four-year international study on the future of the automobile, completed last year, Massachusetts Institute of Technology has begun a sequel study.

The new program, expected to cost about $5 million and also to take four years, will include analyses of the motor-vehicle industries in what MIT calls "developing countries." Countries to be studied include Brazil, Canada, China, Korea, Mexico, Spain and Yugoslavia. India and Malaysia may also be included.

It will look at trucks as well as passenger cars and will examine the total picture of new technologies from the initial steps of designing a vehicle to delivery to the retail customer.

The earlier study concentrated on passenger cars in the U.S., Japan and five European countries. It involved the efforts of some 130 researchers and cost an estimated $8 million.

Looking ahead 20 years, it concluded that the automobile is secure as the prime means of personal transportation and that the industry will remain the biggest in the world. It also analyzed why the Japanese have done so well against foreign competition.

MIT Prof. Daniel Roos, who co-directed the first program, will direct the new one. At the end of the first effort, he said, there was widespread belief that the industry "had returned to profitability and stability."

"However," he said, "we perceived fundamental issues looming just ahead: A new trade crisis emerging, not just from Japan, but from a host of new entrants in the world industry, and a fundamental change in the core technologies of the industry which threaten jobs and traditional patterns of industry organization even in the presence of import threats."

Roos said that many of the industry and government officials who took part in the first study urged the MIT group to continue their research and to continue the annual policy forums which were included in the program. One of those forums may be scheduled in a developing country.

"They had found," Roos added, "that the neutral setting of a university is an excellent place for addressing the social and political implications of the industrial changes which they believe lie ahead."

In the earlier study, each of the seven national teams funded its own efforts. In the new program, funding has been controlled here and is being provided essentially by governments, producers and foundations in the U.S., Europe and Japan. Some funding, however, may come from developing countries.

The new International Motor Vehicle Program, as it is called, will focus on three themes:

1. The emerging organizational pattern of the world industry. This includes assembler-supplier relations, labor-management relations, "cooperative competition" between assemblers and rapidly growing foreign investments.

2. The implication of the new

Long, long limo for hire

What may be the longest operational, street-legal limousine in the world is available for rent from Ultra-Americar of Michigan, Birmingham, Mich. The 36-foot-long car seats 14 and has tandem rear axles and an open, as well as an enclosed, passenger compartment. The car is based on a 1985 Lincoln Continental and was built by Ultra Limousine, Los Angeles. Luxury features include two sunroofs, two color TVs and custom burlwood cabinetry.

Payments are $400 to $700

AMC offers rebates on Alliance, Encore

By Edward Lapham
Marketing Editor

American Motors jumped right back into the incentive fray last week by announcing a Nov. 21-Jan. 10 cash rebate program for Renault Alliance and Encore models.

The program began one day after 8.8 percent financing incentives on some models lapsed at AMC, Ford Motor Co. and General Motors.

Chrysler Corp., which did not announce its 8.6 annual percentage rate financing incentive on selected models until after it settled the national UAW strike in late October, has yet to announce a termination date for the program. Chrysler has the only financing incentive in effect on domestic cars.

The Chrysler program also has a cash rebate option.

The new AMC rebates range from $400 to $700, require dealer participation and can be used for downpayment or even to pay off existing loans on tradeins, the company said.

Rebates of $700 are being offered on 1986 Alliance DL sedans, Alliance L and DL convertibles, Encore LS and GS hatchbacks plus 1985 Alliance DL and Limited models and 1985 Encore LS and GS models.

The $400 rebates are offered on 1986 Alliance base and L sedans and Encore S and Electronic hatchbacks as well as 1985 Alliance base and L sedans and Encore base and S hatchbacks.

Only cars purchased out of stock and delivered by Jan. 10 are eligible.

There was widespread speculation in industry circles last week that GM, with ample inventory and a desire to regain market-share percentage points lost this year, might "extend and expand" its APR program before Thanksgiving Day.

However, there was no new program by presstime.

Automotive News sources said a new program was was ruled out for the forseeable future at an internal GM pricing meeting late last Thursday (Nov. 21).

"We have nothing to announce," a GM spokesman said Friday.

Officials at Ford and Chrysler last week "studied" the situation and prepared to act should GM decide to launch another round of APR incentives.

APR programs at Ford and Chrysler this year generally have been reluctant responses to campaigns initiated by GM and AMC.

Peugeot turbodiesels to be offered in 1986

LYNDHURST, N.J.—Peugeot announced that its 1986 505-S sedan and station wagon models will be available with turbodiesel engines after Jan. 1, 1986.

The company previously said it would drop the turbodiesels for the 1986 model year. (Earlier story on Page 52.)

Domestics lead surge, fueled by incentives

September registrations set record

By Jenny L. King
Detroit Reporter

September new-car registrations reached an alltime high for the month. The total topped one million and surpassed the August count by 19.32 percent.

Domestics were up 29.07 percent year to year, and imports moved ahead 18.93 percent.

In the wake of strong domestic deliveries boosted by incentives,

Table on Page 66

the imports' share of the September market dropped 1.55 percentage points, to 24.87 percent from 26.42 percent a year earlier.

Registrations, according to R.L. Polk & Co., totaled 1,104,999 in September, up more than 19 percent from 926,059 in August and up 26.39 percent from 874,290 in September of 1984.

Domestics numbered 830,230 for September, up 29 percent from both a month earlier (642,543) and September, 1984 (643,261).

The domestics' surge included increases in market shares for the Big Three and a notable plunge for American Motors. General Motors gained 1.24 percentage points, moving up to 43.01 percent from 41.77 percent in September a year ago.

Ford was up 1.11 percentage points, to 20.50 percent from 19.39 percent, while Chrysler gained 0.72 percentage points, up to 10.29 percent from 9.57 percent. AMC tumbled dramatically, down 1.52 percentage points to 1.33 percent from 2.85 percent. Miscellaneous domestics remained too few in number to qualify for even 0.01 percentage point.

Examining the domestic makes in September, one finds only Cadillac, Mercury and American Motors down in share of the market.

Without the import factor, the September market was divided in this fashion: GM had 57.24 percent, Ford had 27.29 percent, Chrysler had 13.70 percent and AMC had 1.77 percent. A year earlier, the breakout found GM at 56.77 percent, Ford at 26.35 percent, Chrysler at 13.01 percent and AMC at 3.87 percent.

The market-class configurations featured domestic intermediates at 29.04 percent, imports at 24.87 percent, compacts at 16.39 percent, subcompacts at 12.61 percent, standards at 8.44 percent and luxuries at 8.65 percent.

A year ago imports had 26.42 percent, intermediates were at 21.41 percent, compacts had 18.50 percent, subcompacts had 13.14 percent, standards had 12.17 percent and luxuries had 8.36 percent.

New-car registrations through the ninth month of the calendar year totaled 8,239,158, up 7.77 percent from 7,644,804. The difference between this year's grand total and that of two years ago was nearly 1.7 million cars, putting the 1985 sum 25.67 percent ahead of 1983.

Domestic registrations for the first nine months of 1985 were up 5.50 percent from their year-ago counterpart: 6,080,324 versus 5,763,486. Domestics were up 29.28 percent from the 1983 total of 4,703,192.

Imports were up 14.75 percent to 2,158,834 from 1,881,318. Their share of the market was up 1.59 percentage points to 26.20 percent from 24.61 percent.

For the January-through-September period, GM was down 2.72 percentage points, Ford was up 0.47 percentage points and Chrysler was up 1.34 percentage points. AMC lost 0.68 percentage points in the nine months.

The domestics-only market in the first nine months was 57.63 percent GM, 26.22 percent Ford, 14.49 percent Chrysler and 1.66 percent AMC products.

Including imports, the breakdown was: GM at 42.53 percent, Ford at 19.35 percent, Chrysler at 10.69 percent, AMC at 1.23 percent and imports at 26.20 percent.

Bieber fears 25 pct. drop in auto employment by '88

By Mary Connelly
Detroit Reporter

UAW President Owen Bieber has predicted a significant drop in auto industry employment by 1988 unless imports are curtailed and U.S. small-car production is boosted.

Testifying before the U.S. Senate Finance Committee in a hearing on trade policy, Bieber warned that industry unemployment in 1988 could exceed by 25 percent the "depressed level of 1984."

The percentage was based on a figure of about 1.3 million workers employed in the auto and light-truck industry, including suppliers, in 1984 and would mean a drop to below 980,000 in 1988, the UAW said.

Bieber blamed some of the potential job loss on import market share which he predicted will mount from 23.5 percent in 1984 to 33 percent in 1988.

Additional unemployment will hit the component sector due to "transplant vehicle" production, he said, referring to the practice of locating only assembly operations in the U.S.

Bieber called for import restraints as well as production of small cars and major-vehicle components in the U.S. by domestic companies to halt the trend.

"The 1984 U.S. deficit with Japan in autos was a staggering $20 billion," Bieber said. "We expect this to grow by $5 billion to $7 billion this year because of the absence of restraints and the imbalance in exchange rates."

Bieber also criticized the labor policies of countries such as South Korea and Taiwan claiming that repression of trade unions exists and "constitutes an unfair labor practice."

Bieber supported the proposed Trade Emergency and Export Promotion Act, a measure supporters claim will curb the U.S. trade deficit with some of the nation's largest trading partners.

Ford recalls 19,000 F-350 chassis cabs

DEARBORN.—In two separate actions, Ford Motor Co. is recalling approximately 19,000 of its F-350 chassis cabs and 173 Tempo and Topaz cars.

The company said that the 1985 and 1986 F-350 chassis cabs equipped with rear-mounted fuel tanks require replacement of a polyethylene retainer nut.

The nut holds in place the sender unit, a part of the fuel gauge system that is mounted on the fuel tank. According to the company, the nut could fracture, allowing fuel to leak.

The 1985 Tempo and Topaz models equipped with 2.3-liter engines and automatic transmissions are being recalled for inspection and possible replacement of the electronic engine control processors.

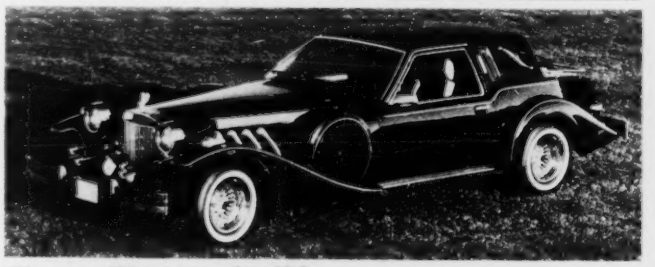
Ford said that an electrical malfunction in the processor could cause the engine to develop or maintain a partially open throttle position, which could result in higher speeds than the driver intends.

Car retrieved via postcard

FALMOUTH, Mass.—The umpteenth variation on the happy ending to car theft has occurred, thanks to a postcard.

A 1980 Chevrolet Chevette was reported stolen from a parking lot. Later, the car owner received a postcard with a Canadian postmark. The writer thanked the owner for the use of the car and said the vehicle could be retrieved at a parking at the airport in Newark, N.J.

"It has a full tank of gas and is in good shape," the postcard message continued. "Sorry for the inconvenience. Thank you very much." Falmouth police contacted Newark Airport authorities and, yes, the car was where the thief had said it would be. The car owner picked up his vehicle.



Zimmer Elegance for '86

Zimmer Motor Cars, Pompano Beach, Fla., has introduced its 1986-model Elegance, powered by Ford's high-performance 5.0-liter V-8. It retails for $62,500.

decision by the National Labor Relations Board which dismissed as inappropriate eight of 14 UAW petitions to represent some employes of General Motors' Electronic Data Systems Corp. The UAW said that when the petitions were filed, they carried the signatures of a majority of employes. However, in dismissing the petitions, the NLRB cited changes in the composition of the EDS workforce. In the remaining six petitions, the NLRB is seeking additional information.

Chrysler completes FinanceAmerica purchase

TROY, Mich.—Chrysler Financial Corp. has reached a final agreement with BankAmerica Corp. to acquire FinanceAmerica. The purchase price of $405 million includes 740,000 shares of FinanceAmerica common stock.

truck industry news

Truck tallies soar to nine-month high but heavies soften

By Joseph Bohn
Truck Editor

Truck registrations set alltime records during September and the first nine months of 1985, led by the light-duty segment.

Heavy trucks, those in Classes 7-8, tumbled last month. Class 7 was up, partially offsetting a decline in Class 8.

For nine months, Classes 7-8 were still ahead of a year ago and

Table on Page 34

narrowly missed topping the nine-month high established in 1979.

During September, the industry registered 389,822 trucks, up sharply from 357,465 in 1984, the previous September high, according to R.L. Polk.

The light-duty segment registered 366,094 trucks in September, up from 330,890 last year.

That included Class 1 registrations of 251,388, up from 196,469; Class 2 registrations of 111,526, off from 131,629, and Class 3 registrations of 3,180, up from 2,792.

Medium-duty registrations of 5,898 in September were off from 7,406 last year.

That included 67 registrations in Class 4, off from 69; 414 in Class 5, off from 531, and 5,417 in Class 6, off from 6,806.

Heavy-truck registrations of 17,830 were off from 19,169 last year.

They included 6,357 Class 7 registrations, up from 6,248; and 11,473 Class 8s, off from 12,921.

Overall, the industry registered 3,483,801 trucks during January-September, up 16.32 percent over last year's previous alltime high of 2,994,962.

Light-duty registrations of 3,275,516 were up 16.51 percent over last year's 2,811,378, the previous peak.

Within the light-duty segment, Class 1 registrations of 2,248,136 were up 39.20 percent; Class 2 registrations of 999,221 were off 14.43 percent, and Class 3 registrations of 28,159 were off 1.66 percent.

The medium-duty segment registered 48,117 trucks, up 15.01 percent from last year.

Medium duties included 674 registrations in Class 4, up 28.63 percent; 5,054 registrations in Class 5, up 94.46 percent, and 42,389 registrations in Class 6, up 9.49 percent.

The heavy-truck segment registered 160,168 for nine months, up 12.99 percent from 141,748 last year.

Within the heavy segment, Class 7 registered 57,663, up 18.16 percent over a year ago, and Class 8 registered 102,505, up 10.28 percent from last year.

International holds a slim lead over Ford, while Mack barely nudged out GMC through the first nine months of th year in the heavy duty segment.

In terms of market share, Mack and Freightliner show the strongest gains.

Freightliner is expected to continue strengthening its position, particularly next year when it introduces its new line of trucks for the construction market.

Son of a shogun

The newest 4WD vehicle on the market, the Suzuki Samurai, features an 80-inch wheelbase and 1.3-liter engine. Suzuki officials expect to draw from several market segments in creating their own special niche.

Suzuki maps strategy for 4WD Samurai

By Joseph Bohn
Truck Editor

Whenever it looks like vehicle marketers might be running out of new niches, someone creates one.

Suzuki of America Automotive Corp.'s Samurai looks like a subcompact Jeep and has the potential to draw from several segments, including off-roaders, subcompact owners and even used-car buyers at its reasonable price levels.

Some 7,000 Samurais will be brought in as trucks, with suggested retail prices beginning at $6,200. By adding a back seat and making a few other minor adjustments, 3,000 more of the same vehicles will be brought in as cars, with list prices of $6,550 and $6,700 for the top-of-the-line model, equipped with AM/FM/stereo and other luxury appointments.

Suzuki officials expect to import the 10,000 vehicles between Nov. 1 and March 31. They went on sale in California Nov. 1 and will go on sale in Florida Dec. 1.

Suzuki has 30 dealers in California, 18 more in the Florida/Georgia area.

They are required to have exclusive showrooms but can share parts and service facilities with other makes.

The importer wants to lay a good groundwork of profitable, high-volume dealers, N. Douglas Mazza, national marketing director, said, so that early sign-ups will help attract additional dealers later.

Suzuki's goal is to build a network of dealers that will, within three years, include outlets throughout the continental U.S, according to Kiyoshi Arai, company president.

The company will provide dealers with a highly sophisticated distribution system to enable them to track local car-buying patterns and supply vehicles accordingly.

The initial ad budget will be $10 million, handled through keye/donna/pearlstein, Los Angeles. Rogers & Associates, Los Angeles, handles public relations.

The ad theme is "never a dull moment." It is designed to stress versatility and what Mazza calls "affordable individualism."

The sport/utility market jumped 73 percent in 1984 and continues to remain strong.

While that segment will serve as the basis for Samurai sales development and direct competitive comparisons, officials feel that other market categories, such as youth and other first-time buyers interested in price and performance, will provide additional sales.

An extensive list of Suzuki accessories will be available to Samurai buyers to allow them to create their vehicle's own personality through a "personalization cen-

Kenworth ups output with Mexican loan

CUERNAVACA, Mexico.—Banco de Comercio (Bancomer), one of the major banking complexes of the nationalized banking system, has granted a $3.5-million credit to Kenworth Mexicana, S.A.

The funds will be used to acquire imported parts for the assembly of 345 tractor-trailers for export markets.

Kenworth, with an assembly plant in Mexicali (Baja California), expects to generate annual sales of $19 million.

About 400 workers will be added, with the additional truck assembly operations accounting for 35 percent of the plant's capacity.

Bancomer's financing role is part of a Mexican program to finance firms exporting manufactured products. The government wants to generate more foreign exchange.

Kenworth's credit will be rediscounted with Pomex, the Fund for the Promotion of Manufactured Products Exports, within the framework of the recently established Profide agency.

Profide's role is to expand exports of manufactured products, other than crude oil products, which still account for 70 percent of Mexico's total export activity.

Royal to distribute Dura-Loc in buyout

LANCASTER, O.—Royal Corp. here acquired DURA-LOC Products and is taking over distribution from Castlefab Corp.

Royal is a supplier of cab and trailer-mounted air deflectors and designer of the original InnerSpace console. Under the acquisition agreement, Castlefab will continue to produce DURA—LOC products, but Royal will market them.

Hendrickson realigns to boost sales

BURR RIDGE, Ill.—Hendrickson International, a worldwide manufacturer of components for heavy-duty truck applications, kicked off an aggressive sales and distribution effort aimed at international markets.

The program involves realigning all divisions under Hendrickson International. This includes Hendrickson Mfg./Tandem Division, now called Hendrickson Suspension; Burton Spring, now called Hendrickson Spring, and Nash Brothers, a manufacturer of truck bumpers, now called Hendrickson Stamping.

Hendrickson also acquired Norde Suspensions, Ltd., Northampton, England, a manufacturer of suspensions for trucks and trailers in the U.K.

With the division realignment and overseas acquisition, Hendrickson hopes to shore up marketing and distribution in the U.S., as well as the U.K., Canada, Australia, Ireland, Japan, Brazil and Mexico.

A decision to sell Hendrickson Mobile Equipment Division to a Michigan-based investment group was also part of the company's long-range planning.

Under terms of the sale, the new owners have a licensing agreement with Boler Co., which owns Hendrickson International, to continue manufacturing specialty vehicles under the Hendrickson name for a period not exceeding three years.

The Mobile Equipment Division is primarily a regional manufacturer of specialized heavy-duty trucks and chassis. The sale and production of all the company's product lines will continue under the direction of existing management operating as Hendrickson Mobile Equipment, Inc.

Computers tailor vehicle orders for Freightliner

PORTLAND, Ore.—Freightliner Corp. has introduced SPECPRO, an all-new fully integrated software program to help truck customers specify heavy-duty Freightliner trucks accurately and economically.

Developed and marketed by the newly formed Freightliner Software Group, SPECPRO is a fully integrated computer program, designed to provide information about any Freightliner model, its operational characteristics and requirements.

Using a computer terminal and color video screen, a salesperson and customer can custom-tailor a vehicle by changing the configuration and options desired at the touch of a button.

The system also allows a customer to specify optimum financing arrangements and calculate the effect equipment purchasing decisions have on life-cycle costs, operating expenses and taxes, according to Freightliner.

Peter E. Rupp, president and chief executive officer of Freightliner, said that with the computer program, Freightliner is ushering in a new phase in manufacturer-directed programs using the benefits of computerization in trucking.

Freightliner's share of the heavy truck segment has been improving steady.

Wyman Ford reaches 50

Retired Ford dealer William Wyman, center, founder of Wyman Ford, Inc., Maplewood, N.J., is congratulated by Robert Lusko, right, Ford Division New York district sales manager, and dealer Lee Horner, of Wyman Ford, on the firm's 50th anniversary.

Love is only a tennis term as Volvo sues net group

NEW YORK.—Volvo and the Men's International Professional Tennis Council are trading volleys in federal district court here.

Volvo North America Corp. has been a major sponsor of many professional tennis events including the international Gran Prix, which the company sponsored for five years until it lost the contract.

However, while it wouldn't be the "umbrella sponsor" for the Gran Prix circuit for 1985 and beyond (the contract went to Nabisco), it still agreed to sponsor seven events.

Last March, at one of the matches, Volvo displayed its tennis banner which said "Volvo Tennis." The administrator of the MIPTC thought it was too similar to the previous banner which said "Volvo Gran Prix" and sent out letters forbidding the use of the logo.

In April, Volvo North America Corp. sued, charging antitrust violations by the sanctioning body. Joining Volvo in the case are International Management Group, Ltd., and ProServ—major tennis managing and marketing companies.

A spokesman for Volvo said Volvo is not asking for money, "only the right to promote tennis."

However, reports have indicated that many are watching the case with great interest since men's professional tennis, with its millions in sponsorship contracts, prizes and endorsements, may be on the line.

As for Volvo, it continues to sponsor the matches it contracted for and has moved into amateur tennis. The company now has a Volvo Tennis League for grassroots clubs which is being run with the U.S. Lawn Tennis Assn. It also has a collegiate program, "Volvo All-American Tennis."

SELL YOUR CUSTOMERS ACCESSORIES FROM JUST ANYBODY AND NEXT TIME THEY MIGHT GO TO JUST ANYBODY.

Cutting corners may cost you and your customer more than you bargained for.

You see, genuine Subaru accessories are designed exclusively for a Subaru. The others have to be modified, and never seem to work or fit exactly right.

And with ours, there's never a problem getting service from Subaru dealers in or out of state.

Remember, if your customers feel they've been short changed, it could cost you a customer.

Tenth year of record sales predicted

BMW upgrades line, adds air bags for '86

By Michelle Krebs
Financial Editor

DEARBORN.—BMW of North America will complete its first decade in the U.S. market in 1986 by posting another sales record—the 10th consecutive record for BMW of North America and the 12th in a row when counting the BMWs that were imported by Hoffman Motors Corp.

Gunter Kramer, BMW of North America chairman, said BMW expects to finish calendar 1985 with about 87,000 sales, a 22.5-percent increase over 1984. He said the increase in 1986 won't be as large because of production capacity constraints: A 2-percent rise, to 89,000 units, was predicted.

The company has dropped the 318i, formerly its entry-level model, from its 1986 product line. An upgraded 325 will serve as BMW's lowest-priced car.

The move means BMW has eliminated its only four-cylinder engine from its U.S. products. All BMWs now have six-cylinder engines.

In 1985, BMW offered two 3-Series cars, the 318i and the 325e, both available as two-door or four-door sedans.

For 1986, BMW offers three 3-Series models despite the elimination of the 318i. They are the 325; the 325e, an upgraded four-door luxury version, and the 325es, the sportier, two-door version.

The 325 has a 2.7-liter six-cylinder engine and disk brakes all around.

At the opposite end of the spectrum, BMW has a new entry in its 7-Series. The L7 is an even more luxurious version of the 735i, a sports-luxury sedan introduced a year ago. The L7 features all-leather interior and driver-side air bag as standard equipment.

Also standard is an electronically controlled automatic transmission. The driver selects sporty or economical gear ratios. Kramer called it a way for the driver to shift gears as well as personalities.

The electronic transmission is available as an option on the 535i, 635CSi and 735i.

For 1986, BMW's 5-Series has three models. The 535i has a 3.5-liter engine; 5-speed transmission is standard. The 528e four-door has a 2.7-liter engine. The 524td is the diesel version of the 528e but with a 2.4-liter turbocharged diesel engine.

The 635CSi sports coupe returns for its second year. It has 3.5-liter engine with the electronically controlled automatic transmission as standard equipment.

BMW features its anti-lock braking system on all 10 of its models. It claims to be the first and only manufacturer to offer the safety feature across its product line.

BMW also provides its anti-theft stereo radio/cassette player, introduced in 1985 on some models, as standard equipment on all of its models. The radio becomes inoperable if removed from the car, making it undesirable to steal. The radio can only be reprogrammed by using a five-digit code given to the owner and stored in BMW's computer.

Three Series switched

BMW has dropped its four-cylinder 318i from its line up for 1986. Three other 3-Series models will be offered: The 325; the 325e, an upgraded, four-door luxury version, and the 325es, pictured, the sportier, two-door version.

From more to most

BMW has made its top-of-the-line luxury model even more luxurious for 1986. The L7, the even-more-plush version of the 735i, a sports-luxury sedan introduced a year ago, features all-leather interior, driver-side air bag as standard equipment and electronically controlled automatic transmission.

Chrysler Mexico names parts exec

MEXICO CITY.—Chrysler de Mexico has appointed Juan Jose Arzac Riquelme director of a new department for international development of parts suppliers.

He will direct programs to supply automotive parts from Mexico to export markets. He will also promote Mexican auto parts makers recommended by Chrysler. Chrysler expects to build up substantial export sales of made-in-Mexico parts.

Formerly a supplies director for Chrysler de Mexico, Arzac Riquelme is also vice president of the Mexican branch of the Society of Automotive Engineers.

Preparation underway for Barrett-Jackson auction

PHOENIX.—Preparation is underway for the Barrett-Jackson Scottsdale 80's Auction of classic and collector cars, slated for Jan. 24-26 at Phoenix Giants Municipal Stadium.

At last year's auction, sales of cars totaled $12.2 million.

BBB helped write 11-point program

Washington dealers adopt ad code

By Jake Kelderman
Washington Reporter

WASHINGTON.—Responding to complaints from customers and dealers, Automotive Trade Assn., National Capitol Area (ATANCA) members—160 of the 175 Washington-area auto dealers—have agreed to an 11-point code of ethics aimed at eliminating misleading advertising.

The code was drafted by ATANCA and the Metropolitan Washington Better Business Bureau over a 10-month period.

ATANCA Chairman Morton Zetlin said he hoped the code would put an end to many questionable ad practices. Among the major problems are the advertising of cars and trucks that are not available or that are not available at the advertised price.

Zetlin, president of American Service Center, Arlington, Va., said the self-regulation program was initiated "because dealers are concerned about fair advertising."

"Misleading ads are unfair to the consumer, affect competition, affect the dealer image, affect the entire community and are not good for business," he said.

Following is a summary of the ATANCA code:

1. Dealers must "fairly and fully disclose" all details of sales incentive programs.

2. When an ad offers a discount from an advertiser's former price, the former price should be genuine.

3. When "list" or "sticker" or similar words are used, they should refer to the Manufacturer's Suggested Retail Price.

4. Ads should not falsely imply that the dealer has a special sponsorship, approval status, affiliation or connection with the manufacturer that is greater or more direct than that of any other dealer.

5. Ads making underselling claims should be capable of being substantiated.

6. Ads advertising a price on a limited number of cars should either say so or clearly and conspicuously disclose the number available unless similar vehicles will be available in a reasonable period at the same price.

7. The "full delivered cash price" for a new automobile should include the cost of any dealer-installed options or services.

8. Advertising should not degrade or stereotype anyone on the basis of sex, race, color or national origin. Neither should it falsely disparage dealer competitors or the automobile business in general.

9. The term "invoice" should be used to mean only the manufacturer's actual wholesale cost invoice to the dealer, and this should be so noted in ads.

10. Any material qualifications or limitations regarding an offer should be clearly and conspicuously disclosed.

11. Auto lease advertisements should not be written to look like auto sales advertisements.

Don Beyer Jr., president of Don Beyer Volvo, Falls Church, Va., and head of ATANCA's Dealer Advertising Committee, said any complaints about dealer advertising would be handled by his committee.

"We'll review the facts, make a decision and forward it to the complaining party and the affected dealer," he said. "They may then pursue whatever further action they deem appropriate.

"Sanctions for noncompliance are not a part of this program, but we will make an effort to persuade the dealer to adjust his advertising," Beyer said.

Zetlin said he could not conceive of any ATANCA member violating the terms of the agreement since they all played such a large hand in drafting it.

"This code will benefit the dealers as much as the consumers," he said.

Drug problems continue at auto plants in St. Louis

ST. LOUIS.—The drug problems continue here as arrests were made involving employes at a second assembly plant.

In addition, General Motors has fired 13 of 15 employes at its Wentzville plant who were charged as the result of an undercover operation.

The latest incident involves two Ford Motor Co. employes who were charged with felony possession of marijuana. Officers arrested them on the parking lot of UAW Local 325 in suburban Hazelwood.

A narcotics officer said that the sales were flagrant and that the pair was selling drugs from their car parked on the lot. Gary W. Akers, 32, and Dennis E. Sadowski, 35, were charged with possession of marijuana. Fifty drug transactions were reported on the lot on a Friday afternoon.

Meanwhile, union leaders of Local 2250 at the GM plant were looking into the firings and had conferred with management. One of those fired, Margarito Frescas Jr., 40, of nearby St. Charles, has been indicted by a grand jury in U.S. District Court on six counts of drug trafficking. He faces up to 80 years in prison.

HUMMERs head to U.S. Army unit

Rail and truck shipments of High Mobility, Multipurpose, Wheeled Vehicles (HUMMERs) have begun. HUMMERs are built at LTV Aerospace and Defense Co.'s plant in Mishawaka, Ind. The first unit of the U.S. Army to receive the HUMMERs will be the 9th Infantry Division at Fort Lewis, near Tacoma, Wash. HUMMERs are built in 15 configurations. During the next five years, 55,000 HUMMERs will be delivered to Army, Marine Corps and Air Force units.

It's starting U.S. car production from scratch

Mazda's job 'tougher' than rivals'

By Richard Johnson
Detroit Reporter

Mazda faces a tougher job than either Nissan or Honda did in launching passenger-car production in the U.S., according to Masahiro Uchida, executive vice president—administration, Mazda Motor Mfg. USA.

In an interview with Automotive News, Uchida said Nissan's's and Honda's previous manufacturing experience in the U.S. made it less difficult to move into the more complex area of automobile production.

Uchida also said Mazda could have avoided the UAW at least initially at its new plant in the U.S. But, unlike Honda and Nissan, the Japanese company decided to court the union and avoid an antagonistic relationship.

During the interview, Uchida said Mazda will build a "626-class" vehicle at its assembly plant now under construction in Flat Rock, Mich. He said there is a running prototype of the vehicle in Japan.

He also cited plans to expand Mazda's administrative workforce at Flat Rock within the next several months. He said the first hourly employes will be hired early next summer.

Mazda is erecting a $450 million assembly facility at the site of the old Ford Michigan Casting center in Flat Rock. Some steel girders have already been erected at the site, which will include final assembly, painting, body assembly stamping and plastics shops. The first car is scheduled to be built in the fall of 1987.

Mazda will become the third Japanese company to establish a wholly owned U.S. manufacturing facility, following Nissan in Smyrna, Tenn., and Honda in Marysville, O. Toyota, which has a joint-venture assembly plant with General Motors in Fremont, Calif., has said it will construct plants in both the U.S. and Canada. Mitsubishi will build a plant in Illinois in a joint venture with Chrysler Corp.

But Uchida said Mazda's task is more difficult than that of Honda and Nissan, since the firm will start out building autos rather than gearing up in the U.S. with other manufacturing projects.

"There is difficulty for us," said Uchida. "Honda and Nissan had experience producing two-wheel vehicles and trucks here. But in our case, we have to produce a brand new passenger car, so we have to accept more difficulty than Nissan and Honda."

Nissan built pickup trucks at Smyrna before launching Sentra production earlier this year, and Honda assembled motorcycles in Marysville before manufacturing cars.

Both Nissan and Honda have resisted the UAW at their U.S. manufacturing sites. More than 2,500 Honda employes will decide Dec. 19 if they want to be represented by the UAW.

Mazda has signed a letter of intent with the UAW defining an interim relationship and providing for union recognition and negotiation of a labor contract. The letter of intent specifies that bargaining begin within three months of commercial production startup and be completed within six months.

"Of course, we could have been able to avoid the unionization the first time," Uchida said. "For the time being, it may have been OK, but it seems obvious that we would have some unionization movement, the UAW would come in and try to unionize.

"Then, probably, the management and the union would have a very controversial approach. We decided we should have a good relationship from the beginning. This is better in the long run."

Uchida said the remaining details of funding arrangements put together by the State of Michigan and used to help lure Mazda to Flat Rock "are almost all finalized."

A financial snag arose earlier this year when a local development council's $20.3 million Urban Development Action Grant loan application to the Federal Government was approved for only $2.5 million. The funding gap was described as critical by Mazda, but the Michigan Economic Development Authority came up with a $21 million loan to Mazda at 8 percent interest.

Mazda in Japan has been reviewing the package, but no major problems are believed to exist.

"Some parts are under discussion, but I understand they are very close to a final agreement," Uchida said.

As part of the state assistance package, Michigan recently forwarded money to the nearby Village of South Rockwood for sewers and roads that will service the plant.

Uchida said there are currently fewer than 10 Mazda employes coordinating work on the construction site with Kajima International, the firm hired to build the plant. Mazda Motor Mfg. USA has about 20 people at the administrative offices at the old Ford casting plant.

"By early next spring, I expect to have more than 100 people working here (in the administrative offices)," Uchida said. He added that the staff will include a "mix" of Japanese and American employes. He said "the earliest hourly worker" will be hired early next summer.

"By the end of next year, we will have probably around 700 or 800 hourly workers here," he said.

Uchida said Mazda expects to buy some parts from Japanese suppliers locating in the Flat Rock area, but added "I'm not sure that they will be coming to open their plants at the same time as we open ours."

"There are some suppliers studying establishing plants in the U.S.," he said. "Of course, we are happy to have them come, but we cannot force them to come."

He said he is not aware, thus far, of any plans by Japanese components makers to locate in the area. He restated the company's goal of achieving 50 percent U.S. content, saying "some plastic parts and also major stamping parts" are likely to be U.S.-sourced.

Uchida said Mazda will work to approximate the just-in-time inventory system in operation at the company's modern Hofu assembly complex in Japan, on which the Flat Rock plant will be modeled.

"We'll try to come as close as possible," he said. "I don't think we can do just the same as we do in Japan, but we are trying to be very close."

The new plant will have capacity for 240,000 cars annually, with Ford Motor Co. buying about half of the output.

The two companies are still working out the details of the arrangement. Uchida said he was unsure of the timetable for finalizing the agreement, but noted that discussions are "on the assumption" that Ford will buy 40-60 percent of the Flat Rock output.

Plans call for launching production in the summer of 1987, with the first car coming off the line that autumn. Uchida said the plant will reach full capacity by late 1988. During the first year of production, the company will build Mazda-badged cars and then begin supplying Ford in the second year of production.

The "626-class" vehicle has been pegged by company officials as an "international-sized" car, about the same size as the Honda Accord and slightly smaller than the GM A-cars.

Despite plans by Toyota and Honda to build relatively small assembly plants in Canada before the end of the decade, Uchida said Mazda has no current plans to build cars north of the border.

Marv Hartwig builds

Marv Hartwig, Inc., has broken ground for MHI Auto Center (Lincoln-Mercury-Nissan), Iowa City, Ia. Construction of the 30,000-square-foot masonry and steel building is scheduled to be completed March 1.

Dealers sponsor Teddy Bear Fair at Minnesota Zoo

MINNEAPOLIS.—The BurnApple Auto Dealers Assn. will sponsor the fourth annual Teddy Bear Fair Nov. 29 at the Minnesota Zoo.

Anyone bringing a teddy bear to the fair will be admitted free. Events include music by the Teddy Bear Band, bear movies and a teddy bear contest.

The dealers have deemed the event "very bearable" and they said it underlines their "teddy bearish" sales philosophy.

On Dec. 2, the eight dealers in Burnsville and Apple Valley will conduct free drawings for Minnesota Zoo Family Memberships. People register for the drawing at any of the dealerships.

Dealerships in the group are Apple Valley Ford, Bill Gonzales Buick, Burnsville Volkswagen, Dick Smith Olds-Pontiac-GMC, Grossman Chevrolet, Park Jeep, Burnsville Volkswagen and Sunnyside Chrysler-Plymouth-Dodge.

VW retains slender lead in European sales race

Continued from Page 1

lead on the strength of a mammoth export drive while its domestic German market remained in the doldrums.

West German sales are still trailing last year's, but by a steadily decreasing amount. At the end of September, the market was down 2.6 percent, compared with 8.1 percent in June and 17.5 percent in March. The German market is the largest in Europe, accounting for nearly one in every four sales.

Of the other three large national markets, the U.K. and Italy are heading toward record or near-record years, and France has recorded a slight upturn after more than two years of falling sales.

In Italy, sales were up 7.8 percent at the end of September, and in Britain, sales were up 4.4 percent. The French increase was only 0.9 percent, but it represented a reversal of the trend.

Even in Spain, the fifth largest market where an upturn is always predicted to be around the corner, demand rose 1.4 percent in the nine-month period.

Compared with the positions at the halfway point of 1985, only Ford and the combined Japanese importers increased their shares of business. In Ford's case, its overall improvement stemmed from success in just one market in one month: The U.K. in August, when it registered 102,200 cars.

August is always the country's peak selling month and, as market leader, Ford reaped the benefit. GM's Vauxhall sold an unprecedented 59,900 units in August.

The Japanese success stemmed from the same development in the U.K., an increasing share of the recovering German market and continued good business in other, smaller markets.

Two-thirds of new cars have faults, survey shows

Continued from Page 6

rate," Dixon said. "The reasons include the personal approach of hand-signed requests, first-class postage on the envelope, a prepaid return envelope and the brevity of the questionnaire."

The questions were developed with the close cooperation of the company's dealer clients. The first, she said, is: "Have you needed warranty service on your new car?"

Although the questionnaire is small in size and the questions can be answered quickly, Dixon said the last entry includes a few blank lines for additional comments. She has received three-page letters from the more-upset respondents.

Engine problems ranked first among complaints, followed by electrical, squeak-leak, exterior paint, interiors, body fits and drivetrain.

Customers often feel helpless, she continued. Dealers do, too. Their relationship with the factory is fragile. They don't need to jeopardize it by unconsciously ignoring customer complaints. And they feel they are blamed for quality over which they have no control.

Denise Chavez, of Burt Chevrolet-Subaru-Toyota, Denver, said Consumer Contact survey services help the three Burt dealerships provide more complete service after sales.

"Our situation is rather unique," she said. "Burt was doing this kind of followup on its own years ago when Consumer Contact further developed it and then marketed it. We now buy their services as well as doing some things on our own, for both new and used cars."

Chavez said today's new cars have to be good because of intense competition in the marketplace and because consumers are more vocal. "They have more opportunities to express themselves, through surveys and such."

Have these post-sale contacts helped Burt's CSI ratings? "Definitely," she said.

obituaries

Edgar Rinke Sr.

DETROIT.—Edgar Rinke Sr., a longtime General Motors dealer in the Detroit area, died Nov. 7 at the age of 85. He became a Buick-Oakland dealer at the age of 17 in suburban Center Line and never quit working as a dealer. Throughout his career, he showed up at the dealership with a brown-bag lunch packed for him by his wife. Over the years, Mr. Rinke was a dealer for eight GM lines—Chevrolet, Pontiac, Oldsmobile, Buick, Cadillac, Oakland, Viking and LaSalle. His son, Edgar Jr., and other relatives operate five dealerships in Southeastern Michigan.

Agnes Fanning Sullivan

SPRINGFIELD, Mass.—Agnes Fanning Sullivan, 89, former owner of Springfield Armored Car Service and a past director of the National Armored Car Assn., died Nov. 6.

EPA studying need for more emission rules

Continued from Page 3

road to make a significant improvement in the air.

But it also tentatively concluded that revising the RVP of its certification fuel to 11.5 psi and changing the test procedure for certifying vehicles is the most cost-effective alternative in the long term.

As much as 584,000 tons of hydrocarbons could be wiped out that way by the year 2010 at savings of some $274 per ton to the public, it reported.

Regulation of fuel, on the other hand, could reduce HC emissions caused by bad auto maintenance, defective automotive components, emission-system tampering, gasoline storage, distribution and vehicle refueling.

In the year 2010, fuel control could eliminate up to an additional 426,000 tons of HC emissions at costs ranging from $998 to $1,681 per ton, EPA said.

The agency set a public hearing at its Ann Arbor (Mich.) Laboratory on Jan. 8, possibly extending into the next day. Written comments are due by Feb. 10.

Overtime boosts output 3.76 pct. for week

Auto production tops 180,000

By Kathy Boyer
Detroit Reporter

With more plants working overtime, last week's estimated domestic production of 180,400 cars was up 3.76 percent from the previous week's 173,863.

The estimated output was 85.45 percent more than the 97,279 built last year during the Thanksgiving holiday week.

So far this year, 7,549,203 cars have been assembled, 6.29 percent more than the 7,102,686 built last year at this point.

Companies accounted for last week's scheduled production as follows: General Motors, 59.01 percent; Ford Motor Co., 19.72 percent; Chrysler Corp., 14.63 percent; Honda of America Mfg. Co., 1.75 percent; American Motors, 1.52 percent; Volkswagen of America, 1.30 percent; New United Motor Mfg. Co., 1.05 percent, and Nissan Motor Mfg. Co., U.S.A., 1.02 percent.

GM will lay off 1,723 employes in Pontiac and Flint Jan. 2 due to reduced demand for Buick Regal V-8s.

The line rate at the assembly plant in Pontiac will be reduced from two shifts at 70 units per hour to two shifts at 50 units per hour. That will temporarily idle 533 employes.

As a result, the body assembly plant in Flint will temporarily lay off 1,190 employes. The plant will continue to produce bodies for the Pontiac assembly plant on two shifts at 50 units per hour.

The production cutback affects only Regal V-8s. The Pontiac plant also assembles the Oldsmobile Cutlass Supreme.

GM said it expects to recall the employes next summer as a result of an anticipated—but as yet unspecified—production shift.

GM's Fiero plant in Pontiac, which had been shut down because of a parts shortage, resumed production Nov. 18.

AMC's Kenosha's plant will be closed today (Nov. 25) through Wednesday for inventory adjustment. Production is expected to resume Monday (Dec. 2). The plant assembles Renault Alliance and Encore.

GM scheduled Saturday (Nov. 23) overtime at the following plants: Flint; Doraville, Ga.; Leeds, Mo.; Framingham, Mass.; Lakewood, Ga.; Tarrytown, N.Y.; Lordstown, O.; Lansing Nos. 1 and 2; Orion Township, Mich., and Oklahoma City.

Ford has daily overtime slated this week at Dearborn; Edison, N.J.; Kansas City; Lorain, O.; Wayne, Mich., and Wixom, Mich.

Chrysler has these plants scheduled for daily overtime this week: Belevidere, Ill.; Newark, Del.; St. Louis No. 1., and Jefferson (Detroit).

Renault 21 for Europe, U.S. to debut at Geneva show

By Jean-Jacques Renaux
Special Correspondent

PARIS.—Renault last week released information on the 21 model that will be introduced at the Geneva Auto Show next March as a replacement for its 18 line.

Photo on Page 1

The new, larger model will go on sale throughout Europe next summer and is slated to be exported to the U.S. by early 1988, although Renault and American Motors officials would not comment on precisely when.

The U.S. version could be sourced either from the main plant in Le Havre, France, or from Renault's Belgian assembly plant in Vilvorde.

The new 21, previously dubbed 19, goes up-market from the 18 and is slightly larger, at 176 inches long. It is offered in two wheelbases: 102 and 105 inches.

Engine choices range from 1.7 to 2.0 liters. The small power plant, used in Alliance and Encore, is transversely mounted in the R21, commanding the longer wheelbase. The bigger aluminum gasoline and diesel engines are hung north-south, as in the Renault 18 and 25.

According to Renault, the 21 fits in a market segment that accounted for 26.4 percent of all new-car sales in Europe last year, a total of 2.65 million. Although that segment has shrunk from more than a 29-percent share five years ago, Renault marketers said that was due partly to hotter competition from segments directly above and below.

The company noted that few new cars have been introduced in that segment in Europe recently. The 21 will compete with the Ford Sierra, Audi 80/90, Mercedes 190, Honda Accord and Integra (Acura) and Austin Montego. The new Fiat Croma, due in a few weeks, will compete in a similar category, and Peugeot is preparing to launch its entry, the 405, before the end of 1987. (Automotive News, June 3, 1985.)

Renault quoted no production target or prices.

The 21 will be offered in only one body style, a four-door sedan without the rear hatch that was seen on some development models. Renault will add a 160-HP turbocharged version in 1987 and, later, a station wagon. The car also is expected to be the first Renault to feature the new 4-speed automatic transmission being developed jointly with Volkswagen.

Truck production passes 3 million; 24 days early

Domestic truck makers assembled their 3-millionth truck last Thursday (Nov. 21)—24 days ahead of 1984's build.

Year-to-date, 3,020,572 units have been built, 6.71 percent more than the 2,830,763 assembled last year at this point.

Last week's estimated production of 76,532 trucks dipped 2.23 percent from the previous week's 78,274 but was 105.30 percent more than the 37,279 built during the Thanksgiving week last year.

General Motors' Lordstown (O.) plant was scheduled for Saturday (Nov. 23) overtime.

Ford has slated daily overtime this week (Nov. 25) at the following plants: Kansas City; Louisville; Lorain, O.; Wayne, Mich.; Norfolk, and Twin Cities.

Chrysler's Warren (Mich.) plant was scheduled for Saturday (Nov. 23) overtime and also daily overtime this week.

Canadian trucks slip 3.43 pct. from 30-week high

Canadian truck makers' estimated output of 18,837 units last week dipped 3.43 percent from the previous week's 19,506.

The prior week's build was the best since the week ended April 20, when 20,166 trucks were completed.

The scheduled output was 9.63 percent more than the year-ago week's 17,182.

Year-to-date, 742,591 trucks have been assembled, 1.57 percent more than the 731,121 completed last year at this time.

The makers' targeted production of 25,682 cars last week was 3.50 percent more than the previous week's 24,813 and 27.39 percent above the year-ago week's 20,160.

So far this year, 977,849 units have been assembled, 2.99 percent more than the 949,462 built last year at this point.

American Motors' Brampton (Ont.) plant was closed last week for inventory adjustment. Production is scheduled to resume today (Nov. 25).

Slick Opel

Rekord replacement in works

Happy with the aerodynamic redesign of its Kadett, Adam Opel will next apply its wind-tunnel-honed look to the midsize sedan that will replace the Rekord in Europe. When the car is launched in August, 1986, it will feature 4-cylinder gasoline and diesel engines powering the rear wheels. A 6-cylinder engine and four-wheel drive are expected later.

Pontiac plant may corral plastic Camaro, Firebird

By Michelle Krebs
Financial Editor

General Motors is considering only one large manufacturing facility for its next-generation of Pontiac Firebird and Chevrolet Camaro models, which are due in 1989 or 1990. That manufacturing center is likely to be in Pontiac.

Sources say GM is evaluating whether it should have one large manufacturing facility for the new models or two medium-size plants.

The Firebird and Camaro, known as GM F-bodies, are now assembled by two plants—one in Van Nuys, Calif., and another in Norwood, O.

GM officials won't comment, saying it's too early to speculate since its is an end-of-the-decade car program.

Whatever the decision on the number of plants, sources say Pontiac has been selected as one of the sites and perhaps the only one.

The move would require renovation of the facility where the rear-wheel-drive Buick Regal and Oldsmobile Cutlass Supreme now are assembled. GM recently announced it would lay off 533 workers at the plant because of reduced demand for Regal V-8s. The rear-drive models were to be discontinued two years ago but were not.

Sources say Pontiac is an ideal candidate for the next-generation Firebird/Camaro line, codenamed GM30, because of its central Midwest location, proximity to suppliers—particularly suppliers of plastic composites—and its high-quality workforce.

The move of Firebird/Camaro production to Pontiac also would make the Pontiac complex the center of plastic body technology. The next Firebird/Camaro will have plastic body panels hung on a steel space frame, similar to the Pontiac Fiero, which is assembled at the same complex. It has yet to be decided if the new Firebird and Camaro will be 1989 or 1990 models.

GM executives reportedly have given verbal approval to suppliers of plastic panels.

One of the principal suppliers is Eagle Picher Co. An Eagle Picher executive has been reported as saying he is "90 percent sure" GM would move Firebird/Camaro assembly to Pontiac from Norwood.

The move means the prospects for the Norwood and Van Nuys plants are unclear.

Van Nuys is the last assembly plant operated on the West Coast by a domestic manufacturer. GM and Ford Motor Co. have closed three others since 1981. A fourth in Fremont, Calif., was closed and reopened as the GM-Toyota joint-venture plant.

In recent months, GM has experienced serious problems with the EPA and California officials concerning air pollution.

The EPA has cited the Van Nuys plant a number of times since last

Enthusiasm is lacking for tax-reform bill

By Geoff Sundstrom
Washington Reporter

WASHINGTON.—The latest version of tax reform produced by the House Ways and Means Committee has met with a lukewarm reception from the nation's auto makers.

The bill, which the tax writers put together after two months of

Related story on Page 48

closed sessions, lowers overall corporate tax rates to 36 percent from the current 46 percent. But actual taxes paid by corporations may be higher because the bill also cuts back and eliminates many business deductions of importance to manufacturing industries and U.S.-based multinational corporations.

General Motors, which has been an enthusiastic backer of tax revision, issued a statement saying, "We have consistently supported fundamental tax reform which would provide for lower rates applied to a broader tax base. A great deal has been accomplished in the current effort to reform our archaic and inequitable tax system."

But, GM continued, "Unfortunately, the results so far have not met the necessary goal of lower rates."

The company did not abandon the tax rewrite effort, however. "Perhaps there is a way to make the changes necessary for support either in the House as it completes action, or in the Senate," GM said.

Neither Ford Motor Co. nor Chrysler Corp. issued a formal

Jeep CJ-7 production will end in January

By Richard Johnson
Detroit Reporter

American Motors will cease production of its venerable Jeep CJ-7 model late next month and will launch the new YJ replacement in May, according to AMC President Jose Dedeurwaerder.

In an interview with Automotive News last week, Dedeurwaerder confirmed the late January phaseout of the CJ-7 at the company's Jeep assembly operations in Toledo. He said AMC will begin building the YJ at the Brampton (Ont.) assembly plant in early February.

AMC has revealed little about the new Jeep, but Dedeurwaerder said last week that "it has some of the features of the Cherokee and Wagoneer that have been so popular."

Sources have described the new Jeep as a lower, wider and more stylish outgrowth of the open-bodied CJ model. Dedeurwaerder projected annual YJ sales volume of "around 30,000."

The CJ model grew out of the famous World War II four-wheel-drive military vehicle, designed by Willys Corp. The name "Jeep" apparently evolved from the military acronym GP, for "general purpose" vehicle. Willys copyrighted "Jeep" after the war and quickly introduced the CJ-2A model for civilian use.

The CJ-5 model was introduced in 1954 and the CJ-7, which offered automatic transmission, debuted as a 1976 model.

About 1.5 million CJ models have been produced for civilian use since the war. The peak year for the CJ was 1978, when sales reached 76,628.

AMC reported sales of 39,547 CJ-7 models in 1984. Through October of this year, 31,974 CJs had been sold, down from 35,774 in the same period last year.

The CJ has been the subject of controversy in recent years due to

In era of multinationals, German auto maker thrives and savors its position

Cross BMW off the merger list; it likes its independence

By Richard Feast
European Editor

MUNICH.—Never a year goes by without the rumor mill grinding out some story or other concerning the imminent demise of BMW, its takeover by another company or even its takeover of another company.

Yet, BMW has steadfastly maintained that it wants to remain its own boss and carry on doing what it does best—making high-quality automobiles that find a ready market throughout the world.

Thus while talk of takeovers by Siemens or General Motors, or of a merger with MAN or Messerschmitt-Boelkow-Blohm (MBB), continues, BMW can reflect on more than a decade of consistent growth and continued profitability.

"We are quite happy as we are," reports Chairman Eberhard von Kuenheim.

News Analysis

Why is it that BMW is always the center of speculation when it comes to the grand view of the future structure of the automobile industry?

For a start, it does not fit into a neat category. In volume, it is neither a Ferrari nor a Ford. It has avoided collaboration; it has no multinational protection; its industrial base is a narrow one of up-market cars and a few motorcycles and marine engines, and it has practically ignored the diversification policies of others.

The conventional wisdom of the day says such a company should not exist—let alone go from strength to strength.

Last year's volume was an unprecedented 432,000, a level at which companies like Austin Rover and Citroen are unprofitable. Tiny volumes like Morgan's, small volumes like Jaguar's and big numbers like GM's—those are the hallmarks of business success, not middling numbers from a narrow-base company.

There has been precious little collaboration with other auto makers; joint projects with ZF and Bosch are commonplace across the industry. And yet, even a company with a strong image like Honda has seen fit to join forces with Austin Rover. It is the same for Saab and Lancia, for Alfa Romeo and Nissan. But a BMW is a BMW.

Unlike Audi or Lancia—or even Ferrari—it has no protection from an international group with huge business and financial clout. There are no possibilities to share even low-cost items like door handles or turn indicators, let alone major suspension or powertrain items.

BMW's health stems from one main platform: Cars that cost a cut above the rest. It is a good market to be in, one that has con-

breaking news

Nissan boosts prices $400

CARSON, Calif.—Nissan Motor Corp, U.S.A., has increased its car and truck prices an average of $400, or 4 percent, because of the stengthening of the Japanese yen relative to the dollar. The boost is effective today (Dec. 2). This is Nissan's second price increase of the 1986 model year. Earlier, it raised its car prices in the U.S. an average of $164, or 1.3 percent. Mitsubishi Motor Sales of America has also increased prices. Stickers of most Mitsubishi cars went up $80 to $260, effective last week. Other Japanese makers are expected to join the round of price hikes because of the dollar-yen change (story on Page 2).

Ford Laser for Australia

New styling features on Ford of Australia's Laser include frameless flush headlights, turn indicators and taillights integrated with adjacent sheet metal, new air inlet replacing the traditional radiator grille, wraparound bumpers integrated into bodyside sheet metal and flush door handles.

Total is down for 5th consecutive 10-day period

Mid-November sales dive 18 pct.

By Jenny L. King
Detroit Reporter

Rumors of late-year consumer incentives abound, but domestic sales continue to flag, and dealers couldn't greet Thanksgiving with the same gusto as they did a year ago.

In mid-November, domestic new-car sales were down for the fifth consecutive period. The sag followed exaggerated sales returns from low-interest-rate loans available in August and September.

The Nov. 11-20 total was off 18.15 percent from last year's, and it was down 27.24 percent on a daily-rate basis. There were nine selling days this year versus eight in 1984.

Domestic dealers reported mid-month sales of 184,327 new passenger cars, down some 40,000 units from 225,196 a year earlier. The daily rates were 20,481 versus 28,150.

The total was up 25.42 percent from 146,969 the first 10 days of the month, and although it was down from 1984, it was up slightly from 174,861 in 1983.

Year-to-date sales totaled 7,461,736, up 3.58 percent from 7,204,124 a year earlier.

Looking at individual makers, there were favorable reports from Volkswagen and Honda. VW said its dealers delivered 2,306 new Golfs in the period, an increase of 75.76 percent over 1,312 for the same period a year ago (and up 56.10 percent daily rate). Honda was up 16.49 percent, to 4,302 from 3,693 (up 3.46 percent daily rate).

General Motors was down 18.23 percent, to 102,614 from 125,495 (down 27.31 percent daily rate). Ford Motor Co. tumbled 22.01 percent, to 47,236 from 60,568 (down 30.68 percent daily rate). Chrysler Corp. was off 20.87 percent, to 23,285 from 29,428 (down 29.67 percent daily rate).

American Motors plunged 51.06 percent to estimated sales of 2,300 from 4,700 a year earlier (down 56.38 percent daily rate), and Nissan mid-month sales totaled 2,284.

The market in the period was divided in this manner: GM had 55.67 percent, Ford had 25.63 percent, Chrysler had 12.63 percent, AMC had 1.25 percent, VW had 1.25 percent, Honda had 2.33 percent and Nissan had 1.24 percent.

A year earlier, GM had 55.73 percent, Ford had 26.89 percent, Chrysler had 13.07 percent, AMC had 2.09 percent, VW had 0.58 percent and Honda had 1.64 percent.

Again, only VW and Honda were up in year-to-year sales by make. Plymouth was down 29.90 percent, Chrysler was down 10.31 percent and Dodge was off 22.83 percent. Ford missed by 19.73 percent, Mercury was down 33.66 percent and Lincoln dropped 1.43 percent.

Buick dipped 30.13 percent, Cadillac was off 22.86 percent, Chevrolet was down 14.12 percent, Oldsmobile skidded 23.99 percent and Pontiac missed by 1.05 percent. AMC was off an estimated 42.86 percent and Renault Alliance/Encore sales dropped 52.50 percent.

Ford's subcompact Escort was the top-selling nameplate in the mid-month period with 12,668 units. It was followed by Chevrolet Celebrity at 9,572, Chevrolet Cavalier at 8,710, Oldsmobile Cutlass Ciera at 6,879 and Ford Tempo at 6,418.

Bill introduced to thwart reduction of U.S. content

Ford under fire on CAFE plan

By Geoff Sundstrom
Washington Reporter

WASHINGTON—Ford Motor Co.'s announcement that it may reduce U.S. content in some of its less-fuel-efficient models if U.S. CAFE requirements are not eased has been answered by an irate Democratic congressman from California.

Rep. Fortney H. (Pete) Stark, who fought against reductions in the CAFE standard last summer,

Related story on Page 21

has introduced a bill that would force Ford—or any other auto maker seeking to avoid CAFE requirements by building lower-MPG cars overseas—to pay a tax on imports equal to any CAFE penalties that are avoided.

Stark's bill would "amend the gas-guzzler tax so that any imports produced by or for American corporations, which would exceed the total number produced by any of those corporations for the year ending Nov. 1, 1985, which would violate the gas-guzzler restrictions, would be subject to an additional tax equal to the penalty they would have to pay under the CAFE standards."

According to EPA, the 1986 Crown Victoria and Grand Marquis are not subject to the gas-guzzler tax.

Stark's bill was introduced after Ford advised NHTSA that it may have to move production of 25 percent of its Crown Victoria/Grand Marquis parts to foreign sources. The move would exempt those cars from U.S. fuel-economy penalties, since Ford could average those low MPG numbers into its import fleet, for which it enjoys credits.

A Ford spokesman said that the announcement was not meant as a threat, but as one of several options the company could pursue to bring itself into compliance with the CAFE law. The company is required by that law to present a plan to NHTSA indicating how it intends to meet future standards.

Stark read Ford's intentions differently, however, saying, "With this threat, Ford has essentially told the American people that the size of its bottom line is more important to America than are jobs in the auto industry, industrial competitiveness, energy conservation efforts and the long-term interests of the entire citizenry."

Ford said it viewed the contingency plan as the "least offensive option" both for American workers and for American consumers who wish to purchase a larger vehicle.

Stark said his bill imposes no additional penalties on the auto companies, "it merely forces them to obey the laws Congress has set."

He observed that the CAFE standards were established in response to the Arab oil embargoes and the resulting energy crises in the U.S. They were created primarily for for a better national energy conservation policy and to ease American dependence on foreign oil, he said. Last year, a third of the oil consumed in this country was imported, and this is expected to rise to 40 percent in the next four years.

Both Ford and GM argue that the fuel efficiency of even their largest cars has improved considerably in the past few years.

Stark said, "It's outrageous that the Administration agreed to change the law for Ford and General Motors in the first place. Now, for Ford to further threaten this country in order to secure the rollback for a longer period of time is nothing short of a crime."

He continued, "Ford was given a gift and they are essentially saying they deserve more."

Five-year pact freezes pay, cuts COLA

Foundry firm gets labor break

By Mary Connelly
Detroit Reporter

An Illinois automotive supplier has negotiated a five-year labor contract containing significant financial concessions to stem the flow of work to offshore foundries.

Wagner Castings Co., Decatur, Ill., which supplies tons of castings annually to the automotive industry, said the new contract calls for a five-year wage freeze, lower wage rates for new hires, elimination of two paid holidays and a $1-per-hour cut in the cost-of-living allowance.

The contract, which covers 850 members of Local 728 of the Allied Industrial Workers, is the basis of a renewed attempt to obtain long-term competitive supply contracts, said Donald C. Lawson, Wagner manufacturing vice president.

Wagner Castings anticipates sales of $65 million in 1985, down from $100 million in 1984, Lawson said. Eagner is one of the largest independent producers of iron castings in the U.S., and about 70 percent of its sales are made to General Motors, Ford Motor Co. and Chrysler Corp.

Foundries in Japan, Taiwan, South Korea, Brazil and South America have captured sales from the American company because of lower wage rates, Lawson said. Competitors also include non-union domestic companies and unionized domestic foundries with lower labor costs.

"Where we're really getting clobbered is offshore," he said, adding that the new labor agreement is designed to "put the company back on track competing with offshore producers of castings."

A local union official said the union agreed to the concessions to save jobs and to limit the amount of work Wagner has been outsourcing outside the foundry since January. David Gilpin, president of Local 728, said about 300 of the union's members are now laid off.

The company's two foundries have been operating at about 60 percent of capacity and working

NADA ad campaign begins on cable TV

By Edward Lapham
Marketing Editor

NADA's first TV spots began airing on selected cable channels during the Thanksgiving holiday weekend.

Two spots, the first-ever NADA televised commercials, were run 179 times during the four-day weekend as a market test on ESPN, CNN and CNNH.

Several years ago, NADA's only other national ad campaign ran on the NBC Radio Network.

This campaign's first message, a 60-second spot dubbed "This Man," shows a white-haired "dealer" in a camel sport coat, white shirt and yuppie-yellow tie seated at a desk, doing paperwork.

"Since 1975, this businessman has survived two recessions, two energy crises, interest rates of 21 percent and constant changes in law dictating the way he does business," the voiceover begins.

The announcer then highlights the business statistics—including employment of 779,800 and a $15.4-billion payroll—and talks about the local and community contributions of "this man."

At the end of the commercial, the voiceover says, "Oh, by the way, this man is your franchised new-car and truck dealer."

The spot ends with the NADA logo and the tagline, "Responsible Citizens of America."

The other message, a 30-second spot dubbed "Mechanic," features a real dealership mechanic, not a Mr. Goodwrench-type actor, getting up from under the hood of a car and wiping his hands on a shop towel.

"I'm a technician," the mechanic begins. He explains that both he and his boss, who is a member of NADA, are dedicated to excellence and that the dealer spends thousands of dollars each year for training and equipment to improve service operations.

The mechanic finishes by saying the franchised new-car and truck dealership is the place to go "for all your transportation needs."

Like "This Man," the "Mechanic" closes with the logo and citizenship tagline.

The two spots were developed and produced by Albuquerque-based Competitive Edge as a test for a proposed "on-going, 12-month marketing plan."

Lee Galles, CE chairman, said the 30-second "Mechanic" spot ran 80 times and the 60-second "This Man" spot ran 43 times during the four-day weekend test, generating more than 39 million gross cable household impressions.

"The dealers were totally, overwhelmingly in acceptance of it," Galles said. "We should get a pretty good feel for how the consumer reacted."

Falls below 25 pct. in September as incentives boost domestics

Import market share declines

By Jenny L. King
Detroit Reporter

Incentives-based record sales of U.S.-built passengers cars in September pushed imports down to less than 25 percent of the total market, although their year-to-date share remained healthy, at 26.20 percent.

Import registrations were up 18.93 percent for the month in a year-to-year comparison. Domestics left them in the dust with a 29.21-percent increase.

Based on figures from R.L. Polk & Co., September import registrations totaled 274,769, up 18.93 percent from 231,029 in 1984.

Their 24.87-percent share of the month's market was down from 26.42 percent a year earlier and was a plunge of nearly six percentage points from 30.62 percent in August, 1985.

Nissan, with record passenger-car sales in September and a plant in the U.S. adding to its monthly total, climbed over Honda and Toyota into first place this year. Its total of 59,886 was up some 16,000 units from 43,743 a year earlier and earned Nissan an additional 2.87 percentage points in the import market.

Second-place Toyota was up 5,000 units but lost 1.66 percentage points in its share of the import market, dropping to 19.93 percent from 21.59 percent.

Honda was third with 15.47 percent of the market, down from 19.64 percent a year ago. Honda's domestic sales, which are included in the import registrations number, have been leveling off to the point of sagging this year, and its import numbers have remained steady in a generally burgeoning market. The result was a rather dramatic drop in share of the market.

Volkswagen, another domestic-import entry, moved into fifth place following Mazda. Subaru dropped into sixth. Volvo held on to seventh, and BMW jumped into eighth from 10th position a year earlier. Mercedes-Benz was ninth and Audi was 10th.

The top 10 imports claimed 87.79 percent of the September import market this year compared with 89.18 percent in 1984.

Import registrations for the first nine months of the current calendar year were up 14.75 percent, to 2,158,834 from 1,881,318. Their share of the overall market remained well above that of 1984: 26.20 percent versus 24.61 percent.

Major changes in positions among the top 10 included Nissan pushing Honda out of second place and BMW moving up to ninth from 10th place. Nissan gained 0.08 percent points over the long haul, VW was up 0.12 percentage points, Mercedes was up 0.16 percentage points and BMW was up 0.36 percentage points.

Ten makes had 88.16 percent of the import market through September, down from 89.82 percent in 1984.

Japan's share of the September total slipped to 72.99 percent from 74.41 percent a year earlier. Cars from West Germany represented 13.00 percent, up from 10.72 percent. U.S.-assembled imports claimed 8.12 percent, up from 8.09 percent and Swedish imports had 4.36 percent, up from 4.26 percent.

Totals from countries of origin this September versus September, 1984, were:

	Sept. 1985	Sept. 1984
Japan	200,551	171,906
W. Germany	35,724	24,758
United States	22,320	18,686
Sweden	11,989	9,846
France	2,038	2,824
Great Britain	1,319	2,233
Italy	590	742
Yugoslavia	238	0
Ireland	0	34
TOTAL	274,769	231,029

During the first nine months of this year, Japanese-built passenger cars accounted for 70.76 percent of the market, down from 71.75 percent in 1984. German products were up to 13.94 percent from 12.55 percent. U.S.-built cars accounted for 8.39 percent, up from 8.11 percent, and cars from Sweden claimed 5.11 percent, down from 5.33 percent. Totals were as follows:

	9 Mos. 1985	9 Mos. 1984
Japan	1,527,560	1,349,858
W. Germany	301,046	236,099
United States	181,210	152,581
Sweden	110,230	100,348
France	1,528	23,740
Great Britain	14,620	13,344
Italy	5,382	5,046
Yugoslavia	238	0
Ireland	0	302
TOTAL	2,158,834	1,881,318

Registrations of new imported trucks were up 20.95 percent in September, to 89,134 from 73,696 last year. Totals from the major makers were:

	Sept. 1985	Sept. 1984
Toyota	32,897	33,262
Nissan	26,453	14,817
Mazda	10,592	10,852
Isuzu	7,557	—
Dodge Ram 50	—	5,434
Others	11,635	9,331
TOTAL	89,134	73,696

Imported-truck registrations numbered 717,989 for the first nine months of the year, up 30.56 percent from 549,936. The breakout:

	9 Mos. 1985	9 Mos. 1984
Toyota	277,984	213,967
Nissan	199,361	146,232
Mazda	83,418	86,383
Isuzu	56,071	—
Dodge Ram 50	—	34,523
Others	101,155	68,831
TOTAL	717,989	549,936

Armstrong Rubber cancels plan to close plant

NEW HAVEN, Conn.—Armstrong Rubber Co. has canceled the previously announced closure of its tire manufacturing plant in Hanford, Calif.

The change in plans was in response to an endorsement and approval by the United Rubber Workers International Union of a plan negotiated by Hanford plant mangement and URW Local 703.

BMW to homolgate Frankfurt show car

MUNICH.—BMW will build 5,000 units of the new 200-HP 3-Series M3 shown at the Frankfurt Motor Show.

They will be built during 1986 in preparation for an assault on the European sedan racing championship the following year.

Nissan to ship Mexican engines to U.S. plant

TOKYO.—Nissan Motor Co. announced that its wholly owned subsidiary in Mexico, Nissan Mexicana S.A., will supply engines, transmissions and other components to its assembly plant in the U.S. beginning next summer to reduce transportation costs.

Nissan said the Mexican facility will supply 1,600-cc engines for the Sentra, produced by Nissan Motor Mfg. Corp., U.S.A., in Smyrna, Tenn.

A Nissan spokesman said the move is part of the company's plan to systematically coordinate production units in the form of knockdown kits exported for assembly and sales in the U.S., Spain, Italy, Britain, Australia and Taiwan.

For now, the spokesman said, Nissan and its Mexican subsidiary will supply engines to Nissan Motor Mfg., enabling it to increase subcompact output to 10,000 units from the present 5,000 by 1987.

Malaysian cars headed for U.K.

KUALA LUMPUR, Malaysia.—The British Government reportedly will permit Malaysian car exports worth up to $47.49 million into England duty free.

The local New Straits Times said the Proton Saga, the first built-in-Malaysia car, will be sold in Britain by Proton Cars (U.K.), Ltd.

The Proton is produced jointly by Perusahan Otomobil National, which is supported by the Malaysian Government, and Japan's Mitsubishi Motors Corp. The engines and other major components are supplied by Mitsubishi.

99,127 units scheduled last week

Thanksgiving cuts auto output

By Kathy Boyer
Detroit Reporter

Because of the Thanksgiving holiday, estimated domestic auto production of 99,127 units last week fell 44.35 percent from the previous week's 178,138.

Last week's output was also 45.84 percent below the year-ago week's 183,027.

So far this year, 7,646,068 cars have been assembled, 4.90 percent more than the 7,288,848 completed last year at this point.

Last week's scheduled production was shared as follows: General Motors, 59.07 percent; Ford Motor Co., 19.19 percent; Chrysler Corp., 16.14 percent; Honda of America Mfg. Co., 1.91 percent; Volkswagen of America, 1.42 percent; New United Motor Mfg. Co., 1.15 percent, and Nissan Motor Mfg. Co., U.S.A., 1.12 percent.

American Motors' Kenosha plant was down last week for inventory adjustment. It is expected to resume operation today (Dec. 2).

UAW members at Chrysler's St. Louis No 2. assembly plant have ratified a new local agreement ending a strike which began Nov. 3 over local plant issues.

The plant resumed production Nov. 26.

The Oldsmobile 88 line at GM's Wentzville (Mo.) plant was down last week (Nov. 25) for paint conversion. Production of Buick Electra and Olds Ninety-Eight was unaffected.

Production of the front-wheel-drive Olds 88 is expected to resume at Wentzville around Jan. 8.

No Saturday overtime was reported last week due to the Thanksgiving holiday.

Jeep CJ-7 output to end; YJ production set for May

Continued from Page 1

its alleged propensity for rollover accidents. In its most recent 10K filing with the Securities and Exchange Commission, AMC acknowledged that it is a defendant in a large number of lawsuits "in which individual plaintiffs allege the existence of design and other defects and seek damages for personal injuries allegedly suffered when Jeep CJ vehicles overturned."

The company has incurred and expects to continue to incur "heavy expenses in the defense and resolution of such matters." However, AMC has denied that the arrival and design of the new YJ is related to CJ litigation.

Sources have said the YJ borrows styling cues from the relatively new Cherokee and Wagoneer models. The new Jeep will reportedly lose some of the starkness of its predecessor.

"With Jeep, we had a product that was rugged, durable and all those kinds of things," Dedeurwaerder said.

"Finally, we were narrowing down the number we could sell because we were going to just one very specific type of purchaser. What we are doing with YJ—and we did it with Cherokee, Wagoneer and Comanche—is trying to become more versatile.

"We don't want to take the good things (away) from the heritage of Jeep," he said. "But we want to make the car more acceptable for all the people that are not necessarily living in the West or living out in the middle of nowhere."

Dedeurwaerder said the YJ "will be like a CJ convertible."

"You can have a soft top, you can have a hard top," he said.

Phasing out CJ at Toledo will clear capacity for Jeep's Comanche pickup, which debuted this fall. Company officials have described the Toledo Jeep operations as "bulging at the seams."

The new Jeep YJ will be built alongside the AMC Eagle four-wheel-drive passenger car at the Brampton plant.

Union Pacific opens car center in Portland, Ore.

PORTLAND, Ore.—Union Pacific System has opened an automobile distribution center here.

Union Pacific calls it the largest auto distribution center in the Pacific Northwest. The project cost $7.7 million.

The company plans to bring in by rail vehicles built in the East and Midwest by General Motors, Chrysler Corp. and American Motors.

The autos and trucks are reloaded on highway carriers and delivered to dealers in Oregon, Washington, Idaho and Montana.

Operations of the 45-acre auto center are handled by Ricketts Auto Terminal Services, Transport Storage and Distribution Co. and Convoy Co.

Japanese mobile phones subject to dumping duties

WASHINGTON.—The U.S. Customs Service will collect anti-dumping duties on imported Japanese cellular mobile telephones due to a final determination by the U.S. International Trade Commission that the Japanese equipment is materially injuring the U.S. cellular phone industry. The mobile telephones are used almost exclusively in automobiles.

The 4-1 vote followed an earlier International Trade Commission finding that Japanese mobile phone manufacturers were dumping their products in the U.S., that is, selling them for less here than in their home market.

Holiday drops truck production from 6-year high

U.S. truck makers pegged last week's output at 45,062 units, down 42.69 percent from the previous week's 78,632 because of the Thanksgiving holiday.

The prior week's production was the highest of any week since the week ended May 19, 1979, when 81,851 trucks were assembled.

Last week's scheduled production was 35.54 percent below the year-ago week's 69,903.

So far this year, 3,067,734 trucks have been assembled, 5.71 percent more than the 2,902,117 units completed last year at this point.

No Saturday overtime was scheduled during the holiday week.

Canadian cars pass one million; 16 days early

Canadian car makers built their one-millionth car last Friday (Nov. 29)—16 days ahead of 1984.

So far this year, 1,004,023 cars have been assembled, 3.55 percent more than the 969,622 completed last year at this point.

Last week's estimated production of 26,584 cars was the best output of any week since the week ended May 14, 1983, when 27,994 cars were assembled.

The scheduled build last week was 5.19 percent more than the previous week's 25,272 and 31.27 percent more than the year-ago week's 20,252.

Canadian truck makers estimated production of 18,837 units last week, down 1.92 percent from the previous week's 19,205, but 4.91 percent more than the year-ago week's 17,955.

Year-to-date, 761,796 trucks have been assembled, 1.61 percent more than the 749,724 completed last year at this time.

GM and Ford join Chrysler on incentives

By Edward Lapham
Marketing Editor

General Motors and Ford Motor Co. last week backslid into a new round of financing incentives, following Chrysler Corp. which announced its program the day before Thanksgiving.

All of the incentives are in answer to sagging sales, which have

Domestic sales slide again. Page 2.

trailed year-ago figures in every 10-day period of the 1986 model year.

Right after the last round of annual percentage rate incentives ended Nov. 20, American Motors shifted into a straight cash rebate incentive of up to $700 on Alliance and Encore models. Chrysler countered with another APR or cash program.

Called "Two Ways to Save," the program offers a Chrysler Credit 8.6 APR for up to 48 months or 9.4 APR for up to 60 months on Omni, Horizon, Charger, Turismo, Aries, Reliant, Daytona, Laser, Lancer and LeBaron GTS plus LeBaron and Dodge 600 convertibles.

Cash alternatives range from $500 to $1,000. The program began Nov. 27. No termination date was announced.

Next, GM launched a J-car incentive with a General Motors Acceptance Corp. 8.5 APR for up to 48 months and a 9.3 APR for up to 60 months. Included are Cavalier, Sunbird, Firenza, Skyhawk and Cimarron.

The program runs Dec. 4-31. There is no order protection, and dealer participation is the now-standard finance reserve reduction.

Ford said that because of its lean stocks it did not want to participate but did so to "keep our dealers competitive."

The Ford program, which runs from Dec. 6 to Jan. 2, features a Ford Credit 7.9 APR for up to 42 months and a 9.9 APR for up to 60 months. Included are 1985 and 1986 Escort and Lynx models plus 1985 EXPs.

Like the GM program, Ford required dealer participation and excluded leased-car and fleet sales.

Just hours before GM announced its program, Edsel B. Ford, Lincoln-Mercury general marketing manager, told reporters

Peeking at Sundance

Plymouth's next new car Jim Dunne/Popular Mechanics

The Plymouth Sundance, slated for introduction next year along with the Dodge Shadow, will fit between Omni/Horizon and Aries/Reliant in Chrysler's small-car lineup. Spy photo shows a two-door notchback; a four-door sedan also is scheduled. Sundance and Shadow will have a 97-inch wheelbase and will offer 1.8 and 2.2-liter engines.

Jaguar draws 1st fine for missing CAFE goal

By Helen Kahn
Washington Bureau Chief

WASHINGTON.—Jaguar Cars, Inc., has the dubious honor of being the first auto company to be fined for not meeting CAFE standards for the 1983 and 1984 model years

The tab to Jaguar is $6,015,990. A check payable to the U.S. Treasurer is due by mid-December.

The 1975 fuel-economy law subjects auto makers to civil penalties of $5 for every tenth of an MPG below the standard multiplied by the number of vehicles sold.

In the 1983 model year, Jaguar's CAFE was 19.2 MPG, well below the standard of 26.0 MPG. In the 1984 model year, Jaguar reached 19.4 MPG, well below the standard of 27.0 MPG.

Jaguar's U.S. sales in the 1983 model year were 12,639, making it liable for $4,297,260. But Jaguar had earned $4,239,290 in credits from 1980 models on, and those credits reduced its liability to $57,970.

Jaguar's sales were 15,679 in the 1984 model year, making it liable for $5,958,020, all of which it must pay since it now has no offsetting carryforward credits.

Last August, Jaguar Cars President Graham Whitehead was given the opportunity to submit a plan to NHTSA for future action to earn carryback credits, but Jaguar has no smaller cars to offset its bigger ones. Jaguar decided not to request a hearing.

Although $6 million is not peanuts for Jaguar, it is nothing compared with the potential liability faced by General Motors and Ford Motor Co.—about $600 million, with GM owing more than $500 million. But since the law tilts to-

Toyota to Kentucky; new subsidiary likely

Toyota has selected a site near Georgetown, Ky., about 20 miles from Lexington, for its U.S. auto assembly plant, company officials will announce during a press conference Wednesday.

The plant will be able to build approximately 200,000 Camry models per year and will employ about 2,500 workers.

Toyota is expected to set up a manufacturing subsidiary in the U.S. to control the plant and handle the operations separately from its car sales unit, Toyota Motor Sales, U.S.A.

The Kentucky plant will be slated for completion sometime in 1988 and will produce cars for the 1989 model year. Camry, the car chosen for the plant, will be redesigned in the 1987 model year.

Toyota lags behind four other major Japanese auto makers in announcing a U.S. assembly plant, although it is a partner with General Motors at New United Motor Mfg., Inc. (NUMMI), in Fremont, Calif. That plant began production at the end of 1984.

The plant announcement ends months of speculation on where Toyota's U.S. plant would be located, yet it opens the question of union representation. Although the UAW represents workers at NUMMI, both GM and Toyota treat their California joint venture as a separate company.

Toyota has maintained that it will be up to the workers at its plant to determine what union, if any, will represent them. It was officials of NUMMI—not Toyota or GM—that struck the deal with

AMC nears deal for low-priced Asian model

By Richard Johnson
Detroit Reporter

American Motors may be close to a joint-venture agreement with an Asian auto maker—a deal that would probably bring a low-priced model to compete with a spate of minicars headed to the U.S. from low-cost sources around the globe.

In particular, signs point to a partnership with Fuji Heavy Industries, parent company of Subaru of America, as first reported in Automotive News last summer (July 29).

AMC is keeping a tight lid on discussions. But in an interview with Automotive News, AMC President Jose Dedeurwaerder said he has conducted talks "with people about different things, but basically about components."

Meanwhile, the rumor mill surrounding AMC has been working overtime in recent weeks. Indications are that the company is finalizing arrangements with a Japanese, South Korean or, possibly, Taiwanese company.

An agreement could specify construction of a joint-venture plant in the U.S. or importing a small, price-leader car.

Renault, which owns 46 percent of AMC, is said to be vitally interested in a Far Eastern alignment as part of a strategy to broaden its sphere to three continents. Asked whether the French company shares AMC's apparent enthusiasm for a joint venture, a Renault source last week said, "Dedeurwaerder is Renault."

Sources in Europe say Renault Chairman Georges Besse, unlike most European auto chieftains, looks favorably on the prospect of a linkup in the Orient. Dedeurwaerder has made no secret of his interest in an affiliation of some sort. He has said AMC would make an attractive partner for a similar-sized company in Japan.

"Why not?" asked the AMC chief executive officer during a recent interview with Automotive News.

Dedeurwaerder recently visited Japan on what he acknowledged was a shopping trip.

"We are talking with some people about componentry, and that is very important to us," he said. "We are very close with some

To launch in February with novel warranties

Hyundai ready to roll in U.S.

By Matt DeLorenzo
Los Angeles Reporter

GARDEN GROVE, Calif.—Hyundai Motor America will begin sales of the Excel subcompact Feb. 15 and expects to have about 10,000 cars at 100 dealers in 31 states, said Max Jamiesson, HMA executive vice president and chief operating officer.

Laying to rest the various pronunciations of the word Hyundai, Jamiesson said the U.S. unit will call itself "Hunday, as in Sunday, Monday, Hyundai."

Jamiesson said the company, in addition to supplying each dealer with 100 vehicles by announcement day, will have $15 million in parts at the company's 100,000-square-foot master depot here and at two 80,000-square-foot warehouses at the company's regional headquarters in Atlanta and New Jersey.

The company will bring vehicles in through four ports, Portland, Los Angeles, New Jersey and Jacksonville, Fla.

Hyundai initially will offer five-door hatchbacks and four-door sedans and will add a three-door hatchback sometime during mid-1986. Cars will be available in states on both coasts and through the Sunbelt.

Jamiesson said the Midwest and Plains states will be added throughout 1986 and 1987. "We will cover 48 states by 1988," he said.

Jamiesson said the dealer body will be doubled by the end of the first year of operation; however, he stressed growth will be limited because the sales strategy of each individual point "is predicated on volume. We want to guarantee the dealer that he will get cars, and make him comfortable with the fact that he will have volume."

Hyundai has been able to sign strong dealers who have committed to housing the franchise in stand-alone facilities on a minimum of two acres.

"Our initial dealers were chosen from more than 4,000 applicants, and that has made it possible to select the best dealers," Jamiesson said. "Our average dealer has four stores, retails more than 1,200 cars a year, has a net worth of $10 million and has been in business for 17 years.

"Seventy percent of our dealers are building new facilities at an average cost of $2.3 million per facility. We see over $300 million in labor costs and construction committed to building these facilities."

Greg Warner, Hyundai's vice president of operations, said the marketing strategy will operate on two levels, the first introducing the company and the second stressing the value of the low price coupled with the high content of the vehicle in a reliable, durable package.

Warner said target buyers are between 25 and 35 years old, college educated and split evenly between men and women. However, he added that the strong price/value relationship will add buyers from all segments, and the Excel will appeal to used-car and mini-pickup buyers. "A lot of pickup truck buyers will evaluate our product," Warner predicted.

Part of Hyundai's strategy in courting new buyers will be "offering a little more," according to Bruce Campbell, group vice president of parts and service. That includes a warranty of 12 months/12,500 miles, a 24-month/24,000-mile powertrain warranty and a 5-year/50,000-mile warranty against rust-through.

"Other cars are coming from countries as well known as Japan. Korea is unknown as an automaker," Campbell said. "We have the added challenge of instilling customer confidence. Our philosophy is that the customer is first."

He added that press interest in Hyundai has been high and therefore the Excel "will be a highly visible product. Interest is going to peak. Our first customers are going to be the spokespersons for the vehicle. We want them to say it is a great car, so we will have a maximum effort to have good starting reputation."

Campbell said that in the first year buyers will be given a one-year membership in the Cross Country Auto Club which will provide them with road service and emergency assistance anywhere in the U.S. through a toll-free number.

Campbell said all dealers will be hooked through computer terminals with Hyundai and will be able to get same-day shipment of vital parts in emergencies.

All dealers are being equipped with computers and ADP software. It will provide paperless car and parts ordering as well as reports of sales. The system also will provide a computerized dealer

Chrysler plant builds four million cars in 26 years

George McKay, right, final asembly inspector at Chrysler s St. Louis assembly plant, joins Plant Manager W. Howard Lewis, wearing suit coat, and other employes around the four-millionth passenger car the plant has built since it opened in 1959. The milestone model, a silver Dodge Daytona Turbo Z, is scheduled to be delivered to Trader Bud's Westside Dodge, Columbus, O.

To keep quality high, Karnsund says

Saab seeks slow, steady growth

By Kathleen Hamilton
Managing Editor

LINDKOPING, Sweden.—Fresh on the heels of introducing a brand-new luxury model—its first mainstream automobile—Saab-Scania is confident the U.S. market for luxury cars will grow to the significantly higher level found in Europe.

Related photos on Page 12

Unfortunately for the small-volume car maker, its near-term growth in capacity won't even keep pace with current worldwide demand for its cars, much less an increasing demand. But slow growth is precisely what Saab wants.

Georg Karnsund

"We don't want to expand faster than 10 percent a year, because if we do, our experience is that we can't keep the quality up, and that is a must," Georg Karnsund, Saab-Scania president, said in an interview at corporate headquarters here. "It is a must for anybody. It certainly is a must for us. But we are looking forward to a gradual increase of 10 percent a year.

"Today, we cannot deliver what we could sell. People are . . . well, they don't like us too much today because we can't deliver. That is a nice problem to have," he said, laughing softly. "But we are looking forward in the long run to increasing capacity in our car division to meet demand."

Saab is considering adding an auto assembly plant, either in Sweden or Norway, to take its capacity beyond the 150,000 units planned for 1988 (Automotive News, Nov. 18).

The company anticipates the European auto market will improve in 1986 with an improved economy.

"I think we will see an increase, especially in Germany because the German market has been very much depressed because of emissions (regulations) problems," Karnsund said. "I believe the market will improve—very slowly, but steadily . . . The segment we compete in is about 14 percent of the European market, but it is only 4 percent of the U.S. market. You people are going to buy more and more luxury cars, we believe."

Saab will continue to compete in its present segment—performance luxury cars—"and climb a little bit higher up, too," he said.

Of the 125,000 automobiles Saab expects to build next year, 30,000 to 35,000 will be the new 9000 model, the luxury car designed in conjunction with Lancia.

The 900 will remain in production for a long while, continuing to be the company's bread-and-butter car, Saab executives emphasized.

"This is the 42nd month in a row in which we have increased our sales in the U.S., and this was based only on sales of the Saab 900," Karnsund said. "So it is continuing to go up."

In 1987, Saab plans to introduce a 900-based convertible that will be built at its Finnish plant. It was designed by American Sunroof Corp., the conversion firm based in Southfield, Mich.

The 9000 has just been introduced in the U.S. and is expected to account for only 20 percent of estimated U.S. sales of 46,000 in 1986, a company spokesman said.

To build the new 9000, the company invested $250 million in machinery at its main assembly facil-

Import-car sales peak as domestics slump

By Jenny L. King
Detroit Reporter

November was another one for the sales record books—for the import record books, that is.

And it was at the expense of the U.S. car makers. Domestics capped the second month of the 1986 model year with their sixth straight 10-day loss with no real end in sight to the slump.

Domestic-car sales have trailed the year-ago figure in every 10-day period since the 1986 model year began.

Sales of imported passenger cars reached a November peak while notching record market penetration for the month and the second-highest penetration for any month. Import year-to-date sales of 2,582,109 were well past the 1984 calendar year total of 2,441,713.

The November domestic tally of 515,802 was down 14.13 percent from 600,692 a year earlier. The three November periods were down 22.15 percent, 18.15 percent and 1.19 percent, following three down periods in October.

Import sales in November were up 22.76 percent, to 247,580 from the year-ago record of 201,674. Import market share climbed to 32.43 percent from 25.17 percent the preceding year.

Total new-car sales in November were off 4.86 percent, to 763,382 from 802,366. The year-to-date grand total of 10,228,351 was up 6.19 percent from 9,632,126 through November of 1984.

Domestic sales of 515,802 were lowest for the month since 1981 when 431,726 retail deliveries were reported. This year's figures included declines for all the major makers with except Volkswagen which enjoyed a 47.43-percent increase.

General Motors was off 10.50 percent, to 293,884 from 328,378 last year. Ford Motor Co. said its dealers delivered 122,341 units in the month, down 23.29 percent from 159,485.

Chrysler Corp. sales dropped 16.25 percent, to 68,459 from 81,743. American Motors tumbled 48.02 percent, to 7,747 from 14,905. Volkswagen was up 47.43 percent, to 6,120 from 4,151, while Honda slipped 6.57 percent, to 11,240 from 12,030, and Nissan reported first-year sales of 6,011 Sentras from Tennessee.

GM's share of the November market increased to 56.98 percent from 54.67 percent last year. Ford dropped to 23.72 percent from 26.55 percent. Chrysler had 13.27

AMC hikes price of lame-duck CJ-7

SOUTHFIELD, Mich.—Although production will end in January, American Motors has increased the price of the Jeep CJ-7 sport utility vehicle by $225.

The new price is $7,725, up 3 percent from the former tag of $7,500. AMC said an average-equipped CJ-7 is up 2.1 percent. Option prices and destination charges are unchanged.

The CJ-7 is built at Toledo. The end of production will give AMC greater capacity for assembly of the new Jeep Comanche pickup at that plant.

To protect dealers against distribution changes

New Jersey enacts 'Saturn' law

By Mary Connelly
Detroit Reporter

Spurred by worries over the marketing of Saturn, the New Jersey Automobile Dealers Assn. has won a state law which prohibits manufacturers from selling vehicles directly to consumers.

The law could affect the sale of gray-market vehicles, although it was not intended to do so.

New Jersey's 720-member dealer association initiated the legislation which requires the use of a dealer to sell new cars and trucks. Dealers say the new law protects their business investment and benefits consumers.

However, manufacturers including General Motors, Ford Motor Co., Chrysler Corp. and those represented by the MVMA opposed the measure in testimony in the New Jersey legislature. Critics called the law unnecessary, claiming dealers were adequately protected by safeguards already on the books.

"It really gained momentum on the part of dealers, and they started to feel concerned and anxious when General Motors started to talk about new, innovative ways they might want to market the Saturn product," said Charles E. Walton, president of the New Jersey Automobile Dealers Assn.

"That gave it the momentum that got the dealers to push hard for legislative passage."

Saturn Corp., a subsidiary of GM, has not announced distribution plans for its new small car, which is expected to go on sale in 1989 or 1990. However, the auto maker in announcing establishment of Saturn Corp. said dealers would have to apply for a Saturn franchise and a separate facility would be required.

C. Reid Rundell, executive vice president of Saturn Corp., has also stated the company may "depart from the traditional" methods of distribution and is studying other franchise operations, including those in the fast-food industry, for concepts. He drew particular attention to the McDonald's operation in which the company owns the land (Automotive News, Sept. 23).

Stronger yen has Japanese in price bind

By John K. Teahen Jr.
Senior Editor

Japanese auto importers are watching something even more important than sales figures these days. They have both eyes on the currency exchange rate, which has a lot to do with how much they will charge for their cars in this country.

Not too long ago, the rate was about 235-240 yen to the dollar, and the importers were in clover. Last Thursday, the rate was 202.70, and the clover was not so sweet. The dollar is buying fewer yen, and that's not good for profits.

The U.S. auto makers are undoubtedly watching the Japanese dilemma with glee. Higher prices for Japanese cars make the domestic products look better.

But there's another reason: Jan. 1 is approaching, and what does Jan. 1 mean? It generally means a price increase by the domestic makers. Higher stickers on Japanese cars will will cut the competitive disadvantage of any Happy New Year price hike.

Three of the Japanese importers have bowed to the inevitable and have raised their U.S. car prices. The others were still holding out late last week, but it appeared to only a matter of time until they climb aboard the bandwagon.

Mitsubishi was the first to boost prices and Nissan was close behind (Automotive News, Dec. 2). Honda soon followed suit.

Toyota, Mazda and Subaru were still on the fence at presstime. Isuzu hiked the price of its Trooper sport/utility vehicle but hadn't touched its cars.

Honda's increase matched Nissan's at $400, or 4 percent. At the beginning of the 1986 model year, Honda bumped its stickers an average of $387, so the total is $790 since last summer. The figures apply to both imported and U.S.-built Hondas.

The Civic three-door hatchback with 1.3-liter engine, Honda's price leader, rose only $170 (now $5,649), but the hikes on the fancier models were steeper. The Accord DX hatchback climbed $370 to $8,799 and the LXi hatchback went up $500 to $11,649.

The Accord DX four-door sedan jumped to $9,679, up $380, and the Accord LXi four-door rose to $13,199, up $524. The Prelude Si coupe now wears a $13,538 sticker, an increase of $543.

Isuzu's Trooper shows increases of $190 for the Deluxe model and $540 for the LS. As noted, Isuzu hasn't yet revised car prices.

Toyota, Mazda and Subaru were

Cadillac Allante body as it will arrive in Detroit.

Super-plush Cadillac Allante may be sold in Europe, too

By Michelle Krebs
Financial Editor

Cadillac may sell its two-seat, ultra-luxury Allante in Europe as well as in the U.S., according to John O. Grettenberger, the division's general manager.

Cadillac offered the first glimpse of the 1987 model last week at a media extravaganza at which contracts for air-shipping the bodies from Europe to Detroit were signed.

Grettenberger said the No. 1 competitor for the convertible coupe, which is expected to sell in the $40,000 to $50,000 range, will be the Mercedes-Benz 560-SL, the upgraded version of the 450-SL two-seater. The 560-SL is priced at $48,200 plus a $1,300 gas-guzzler tax.

Volume for Cadillac's Allante will be about 7,000 *units in the first year and 8,000 in each of the* following two years, Grettenberger said.

"We think the volume is low enough to easily be accommodated in the North American market," he said. "But we also see some benefit to looking at an export program. No decision has been made on whether we will see it in Europe or how many we will sell."

The benefit would be a boost in Cadillac's international image, he said.

Grettenberger, along with Umberto Nordio, Alitalia chairman, and Franz Schoiber, Lufthansa executive president, signed a contract to air freight the Allante bodies from Europe to Detroit.

Pininfarina, the Italian design house, has designed and will manufacture the bodies. They will be flown to Detroit where they will be married to the powertrain and chassis at GM's newest plant, the Detroit-Hamtramck Assembly Center.

Officials of Cadillac and the airlines said the contract is believed to be the largest air cargo contract ever written, though they would not say if they were referring to dollars, length of the contract or the number of flights.

Grettenberger said the five-year contract, which has options for renewal, approaches $100 million.

The airline officials said the contract was significant for more than the dollar amount. They said it means the airlines will be part of the production process rather than only part of the distribution network.

Sergio Pininfarina—Designer

Grettenberger called it the world's longest assembly line.

He said Cadillac chose to air freight the bodies to eliminate the possibility of damage.

In addition, he said, flying the bodies from Europe and flying the parts from the U.S. will keep the delivery time as short as possible. The delivery time is cut to 12 hours from 24 days by ship.

Three times a week, beginning next October, the Boeing 747s will make the loop from Turin to Detroit to Frankfurt and back to Turin.

Each plane holds 56 bodies, which will be encased in specially designed cradles.

After the planes are unloaded in Detroit, they will return to Turin or Frankfurt with U.S.-made parts for the Allante and other GM operations in Europe and the Mideast. More than 80 components for the Pininfarina Allante body will be made in the U.S.

The planes that stop in Frankfurt will pick up German parts for the Allante before going on to Turin.

No 4-door for Ferrari —too popular

By Richard Feast
European Editor

The Ferrari factory has killed its plan to manufacture a four-door sedan.

The irony is that the decision was made because extensive market research revealed sales potential for the model went far beyond the company's limited production facilities.

It is a level at which Ferrari is enormously successful and handsomely profitable. This year, it will squeeze about 3,200 cars out of the factory, a record. The waiting time for the megadollar Testarossa is already two years, and there are reports of eager customers prepared to double the list price for instant delivery.

Fitting a four-door into factory schedules would have been at the expense of the coupes and convertibles which Ferrari has made since it was created in the late 1940s. It would also have meant a significant change of emphasis, a move away from its traditional customers and into the Rolls-Royce category.

Italian sources suggest that the potential was for "several thousand" sedans each year, most notably for the U.S. It was against that background that the decision was made to cancel the four-door project.

The model was exhibited for the first time as the Ferrari Pinin at the 1980 Turin Auto Show. The work of Pininfarina, it was no secret that the car was the forerunner of what was expected to be Ferrari's first four-door.

Sergio Pininfarina, president of the Italian design house, said he was sorry the project would not see production and he has no alternate plan for the car body.

Pininfarina said Ferrari executives told him that the four-door indeed would be a move away from its emphasis. They decided to

Honda testing air-bagged cars on U.S. roads

GARDENA, Calif.—American Honda is running a small test fleet of cars with driver-only air bags on U.S. roads, with the idea that by 1987—or possibly mid-1987—models it will be able to garner extra credits that count toward meeting the 10 percent phase-in requirement of passive restraints under Standard 208.

The air-bagged test cars have electronic sensors, and the system is designed as original equipment only. It is being tested on the Accord four-door sedan, but it could also be used on luxury models like the Legend four-door.

Its price tag would be about $800 and it would be considered supplemental to belt systems. Conceivably, it could become a full-front passive system.

Much depends on the level of confidence American Honda gets from the U.S. road testing which is being done at various temperature, altitude and road conditions.

Standard 208 is now being challenged in court by State Farm and others on grounds that it is illegal to link rescission of the passive-restraint mandate to passage by states of mandatory belt-use laws covering two-thirds of the nation's population.

That's the day Taurus and Sable debut

Christmas is Dec. 26 for Ford

By Jake Kelderman
Washington Reporter

WASHINGTON.—The Christmas season is upon us, but Ford Motor Co. officials aren't thinking of yule logs and mistletoe.

They're looking at Ford Taurus and Mercury Sable, the company's radically new intermediate lines that are expected to "carry Ford into the next century."

Scheduled for introduction Dec. 26, the cars represent a $3 billion gamble for the company and a chance to recapture buyers increasingly enamored of import models. Last week, Ford began its final press blitz for the cars with regional briefings throughout the country.

In Washington, Ross Roberts, Ford Division general marketing manager, extolled the virtues of Taurus and Sable as he has done any number of times before.

"This is the most expensive and best-built product we've ever brought to market," he said. "A car conceived and produced radically different from any before. This time, we asked the market—car buyers—what they wanted; we asked dealers what they wanted; we asked engineers what they wanted, and we asked marketing people what they wanted, rather than the other way around.

"This car will be built differently (modular) and sold differently, and we're going to move half a million a year," he said.

Ford has some 100,000 orders in hand for Taurus/Sable, but 500,000 units per year may be asking

Import deliveries set a record

Domestic sales dip in November

Continued from Page 2

percent, down slightly from 13.61 percent.

AMC's share dwindled to 1.50 percent from 2.48 percent. VW improved its position to 1.19 percent from 0.69 percent. Honda had 2.18 percent, up from 2.00 percent, and Nissan earned 1.16 percent of this year's November market.

VW, Pontiac, Chevrolet and Lincoln all increased year-to-year sales in November, with their competitors lagging behind 1984 as much as 56.70 percent. VW was up 47.43 percent, Pontiac was up 3.87 percent, Chevrolet managed a 0.71-percent gain and Lincoln was up 0.51 percent.

Plymouth was off 23.78 percent, Chrysler was down 9.43 percent and Dodge was down 16.12 percent. Ford dropped 20.72 percent, Mercury plunged 36.71 percent, Buick was off 35.40 percent, Cadillac was down 20.49 percent and Oldsmobile dropped 9.11 percent. AMC was off 56.70 percent and Renault was down 46.50 percent November to November.

With 25 selling days in the month each year, the domestic daily rate dropped 14.13 percent, to 20,632 from 24,028.

Domestic sales January through November were up 3.46 percent from the comparable year-ago period: 7,646,242 vs. 7,390,695.

The imports' sales romp included several notable increases and the usual smattering of monthly records. Audi, BMW, Mazda, Saab, Subaru and Volvo reached November sales highs.

Makes with sizeable gains were BMW, up 26.76 percent; Dodge Colt, up 32.65 percent; Honda, up 17.45 percent; Isuzu, up 36.25 percent; Mazda, up 76.19 percent; Mitsubishi, up 22.39 percent; Plymouth Colt, up 20.67 percent; Porsche, up 63.16 percent; Saab, up 24.49 percent; Subaru, up 32.25 percent, and VW, up 34.93 percent.

Import sales January through November were up 15.20 percent, to 2,582,109 from 2,241,431. With one month to go, they already have surpassed their former full-year record of 2,441,713 set in 1984.

Imports were the show-stoppers in the November market-class breakdown with their 32.43-percent share of the total. Domestic intermediates were a distant second at 23.93 percent, followed by compacts at 14.97 percent, Subcompacts at 13.78 percent, luxury models at 7.92 percent and standards at 6.97 percent.

A year earlier, the market-class spectrum read as follows: Imports at 25.17 percent, intermediates at 24.54 percent, compacts at 17.79 percent, subcompacts at 14.08 percent, standards at 9.72 percent and luxuries at 8.70 percent.

Third-period domestic sales narrowly missed the year-ago mark, dipping 1.19 percent to 184,506 from 186,721. The daily rate averaged 23,063, down 1.19 percent from 23,340.

GM was up 4.25 percent for the period, Ford dropped 6.55 percent, Chrysler was down 10.56 percent, AMC plunged 47.59 percent, VW was up 22.39 percent and Honda was down 12.42 percent.

The market-shares breakout found GM at 56.39 percent, Ford at 23.77 percent, Chrysler at 13.16 percent, AMC at 1.71 percent, VW at 1.46 percent, Honda at 2.20 percent and Nissan at 1.31 percent.

Chevrolet includes Sprint and Spectrum. Honda combines imports and domestics. Dodge includes Colt, Conquest, Vista. Plymouth includes Colt, Conquest, Vista. VWoA includes Audi and Porsche through Aug. 31, 1984. Porsche figures began Sept. 1, 1984. Nissan includes Sentras built in the U.S. Mercury includes Merkur.

Toyota chooses Kentucky; new subsidiary likely

Continued from Page 1

the UAW at Fremont, so the Kentucky plant will be the first test for the management of Toyota Motor Corp. in American labor relations. And the UAW, coming off its successful strike against Chrysler, may take a harder line against the largest importer in the U.S.

Another related issue is how the new manufacturing venture will affect Toyota Motor Mfg. in Long Beach, a facility that produces pickup truck beds. While it seems logical that it may become part of the new manufacturing enterprise, there is some speculation that the operation is less critical to Toyota now that the Kentucky plant is there to blunt any trade criticism aimed at the Japanese company.

That facility was set up at a time when adding the beds to the pickups in the U.S. allowed Toyota to import its trucks as components, thereby qualifying them for a 4 percent duty. If they had been brought in fully assembled, they would have been classified as trucks and subjected to a 25-percent duty.

The law was subsequently reinterpreted, subjecting them to the higher duty rate. The U.S.-produced beds add cost to Toyota's pickups in a market that is increasingly cost competitive.

obituaries

Joseph A. Anderson

FLINT.—Joseph A. Anderson, 85, retired General Motors vice president and general manager of AC Spark Plug Division, died Nov. 25. He joined AC in 1924 as a foreman and became general manager in 1953. As a GM vice president, he was also an assistant group executive. He retired in 1964. He was a moving force in Flint community activities for 50 years and was a long-time trustee of the C.S. Mott Foundation.

Bard Young

DETROIT.—Bard Young, 69, retired UAW international representative and director of the union's Region 1E in Detroit, died Dec. 2. In addition to his work in the UAW which dated to the union's organizing in the 1930s, he was active in the civil rights movement and political campaigns.

Halsey Davidson

DETROIT.—Halsey Davidson, 83, former vice president of Campbell-Ewald Co., died Nov. 27. While vice president and creative coordinator on the Chevrolet business, he received numerous professional merit citations.

Year closing with a bang again: 189,795 built

Auto production at 12-month high

By Kathy Boyer
Detroit Reporter

With 16 plants working overtime Saturday (Dec. 7), U.S. car makers' estimated production of 189,795 units last week was the highest since the week ended Dec. 15, 1984, when 189,998 cars were assembled.

The scheduled build last week was 91.80 percent more than the previous week's 98,954 (reflecting the Thanksgiving holiday) and 4.54 percent more than the year-ago week's 181,558.

Production for November—670,693 units—dipped 11.86 percent from October's 760,917 and was 1.21 percent below the 678,927 cars built in November, 1984.

So far this year, 7,835,690 cars have been assembled, 4.88 percent more than the 7,471,294 completed last year at this point.

Companies shared last week's scheduled production as follows: General Motors, 59.58 percent; Ford Motor Co., 18.60 percent; Chrysler Corp., 16.83 percent; Honda of America Mfg. Co., 1.77 percent; Nissan Motor Mfg. Co., USA, 1.23 percent; New United Motor Mfg., Co., 1.00 percent, and Volkswagen of America, 0.99.

American Motors' Kenosha plant remained closed last week for inventory adjustment. Production is expected to resume today (Dec. 9).

GM will add a second shift at the Detroit—Hamtramck assembly plant today, increasing employment by 2,000.

GM's Wentzville (Mo.) plant resumed production Monday (Dec. 2) after being closed for paint conversion for the front-wheel-drive Oldsmobile 88.

Chrysler's Sterling Heights (Mich.) assembly plant is closed this week as the first step in preparing for production of the Plymouth Sundance and Dodge Shadow.

Production of the LeBaron GTS and Lancer is scheduled to resume at that plant Jan. 2.

The following GM plants were scheduled for overtime on Saturday (Dec. 7): Doraville, Ga.; Framingham, Mass.; Lakewood, Ga.; Oklahoma City; Tarrytown, N.Y.; Flint; Janesville, Wis.; Leeds, Mo.; Lordstown, O.; Orion Township, Mich.; Willow Run, Mich.; Lansing (Nos. 1 and 2), and Detroit—Hamtramck.

Ford has slated daily overtime this week (Dec. 9) at these plants: Lorain, O.; Dearborn; Wixom, Mich.; Edison, N.J.; Wayne, Mich., and Kansas City.

Chrysler's Belvidere, Ill.; Newark, Del., and St. Louis (Nos. 1 and 2) plants were scheduled for overtime Saturday (Dec. 7).

Daily overtime is slated at those plants this week.

Two sites in Toronto area lead Toyota guessing game

TORONTO.—Speculation on the site of Toyota Motor Corp.'s planned Canadian assembly and stamping plant is now centering on two cities in the Toronto area.

Canadian wire service reports last week quoted sources at the Ontario provincial legislature who said the $300 million (Canadian) plant will be built in either Pickering or Markham, which are located northeast of Toronto.

Reports have also circulated that the facility may be situated in Trenton or Belleville, located about midway between Toronto and the national capital of Ottawa on the Bay of Quinte along the northern shore of Lake Ontario.

Sources at Markham municipal offices told Automotive News last week that city officials have been "engaged in talks with Toyota," but said there has been no confirmation of the company's plans. The mayor and town manager in Pickering were unavailable for comment late last week.

Toyota announced last summer that it will construct two new assembly plants in North America, a U.S. plant that will turn out 200,000 passenger cars annually and a Canadian facility with annual capacity of 50,000 units. Both plants are expected to begin production in late 1988.

Truck production down last month from 6-year high

Domestic truck makers' November output of 291,446 units fell 14.59 percent from October's 341,249.

October's output was the highest production of any month since March, 1979.

November's build also dropped 1.16 percent from the year-ago month's 294,861.

Last week's estimated production of 84,086 trucks was 84.52 percent more than the previous week's 45,569 (which reflected the Thanksgiving holiday) and 20.96 percent more than the year-ago week's 69,515.

So far this year, 3,152,327 units have been assembled, 6.20 percent more than the 2,968,372 completed last year at this point.

General Motors scheduled Saturday (Dec. 7) overtime at the following plants: Flint (Nos. 1 and 2); Baltimore; Pontiac West; Janesville, Wis.; St. Louis; Lordstown, O., and Lorain, O.

Ford Motor Co. has slated daily overtime this week (Dec. 9) at Wayne, Mich.; Kansas City; Norfolk; Twin Cities; Lorain, O., and Louisville.

Saturday (Dec. 14) overtime is scheduled at Ford's Twin Cities, Lorain, Louisville and St. Louis plants.

Chrysler Corp.'s Warren (Mich.) plant was slated for overtime Saturday (Dec. 7) and for daily overtime this week.

November output of Canadian cars dips to 103,893

Canadian auto makers reported production of 103,893 units for November, down 3.71 percent from October's 107,891 and also 9.99 percent below the year-ago month's 115,428.

Last week's estimated production of 23,870 cars was 2.62 percent below the previous week's 24,512, but was 23.89 percent more than the year-ago week's 19,267.

So far this year, 1,025,821 cars have been assembled, 3.63 percent more than the 989,874 completed last year at this point.

Production of 80,202 trucks for November was 19.65 percent more than October's 67,031 and 5.25 percent above last November's 76,198.

The estimated build of 19,576 trucks last week was 2.97 percent more than the previous week's 19,012 and 6.90 percent more than the year-ago week's 18,312.

Year-to-date, 781,547 trucks have been completed, 1.69 percent more than the 768,562 assembled last year at this time.

American Motors' Brampton (Ont.) plant remained closed last week for inventory adjustment.

Production at that plant is scheduled to resume today (Dec. 9).

Freight Rover to use fiberglass-resin spring

SOLIHULL, England.—The fiberglass-resin reinforced composite spring developed by GKN is to be used on Freight Rover's Sherpa vans.

It will be a world first in production. The spring is 65 percent lighter than a conventional steel spring, meaning a 55-pound increase in Sherpa's payload.

Satellite era dawns at U.S. auto makers

By Richard Johnson
Detroit Reporter

Whether it is marching orders or walking papers, U.S. auto companies can get the word out to employes faster and farther these days by bouncing it off an orbiting satellite.

At the very least, satellite networks appear to be revolutionizing employe communications at the far-flung operations of General Motors, Ford Motor Co. and Chrysler Corp.

Auto makers have, through seperate aerospace operations over the decades, helped develop the satellite technology which will eventually link them not only with internal operations, but also dealers.

Just last week, for instance, Ford signed a $276 million contract with the U.S. Government for three weather-forecasting satellites.

For now, though, the satellite bank-shot enables executives in Detroit to sit "across-the-table" with field staffs when, in fact, they are across the country. Instantaneous hookups with distant offices are often as serviceable as face-to-face meetings, without the travel time.

And the companies say there is no better way to rally the troops than to put before them a top executive, a proven communicator, a Lee Iacocca.

Besides teleconferencing, the companies are transmitting a wide variety of information, including corporate news, program introductions, distribution instructions, training sessions and product features. And the auto makers are in varying stages of offering

Range Rover moves toward sales in U.S.

By Richard Feast
European Editor

SOLIHULL, England.—The manufacturer of the luxury Range Rover station wagon has established a wholly owned subsidiary in the U.S. in preparation for the vehicle's launch within the next 12 months.

Range Rover of North America, Inc., operating initially out of offices in Saddle Brook, N.J., is about to start a dealer recruitment campaign by inviting selected retailers of prestige European imports to apply for a franchise.

Range Rover plans to be picky in its selection of dealers. In the early stages it wants only around 60, located in major metropolitan and snowbelt regions. It is also understood to be modest in its initial sales aims—up to around 4,000 units in the first year.

The vehicle is a permanent four-wheel-drive built by Land Rover here in the Midlands of En-

Choctaw Indians assemble components for U.S auto makers

Choctaws give Big 3 parts source in U.S

By Michelle Krebs
Financial Editor

PHILADELPHIA, Miss.—East central Mississippi is the poorest part of the poorest state in the U.S. Yet it is here—on an Indian reservation—that the Big Three auto makers have discovered an alternative to sourcing auto parts in Southeast Asia and Mexico.

In the past six years, the Mississippi Band of Choctaw Indians has built two wire harness plants—one for General Motors and a second for Ford Motor Co. The plants employ 550 workers. Annual sales total $17 million, and annual payroll exceeds $5 million.

This fall, Chicago-based Oxford Speaker Co. opened an assembly plant for radio speakers used in Chrysler automobiles. GM's Buick-Oldsmobile-Cadillac Group also has awarded Oxford Speaker a contract for radio speakers, to be produced by the Indians beginning in June or July. Nearly all of GM's radio speakers are foreign sourced.

Oxford Speaker was being pressured by its auto company customers to find an offshore partner to bring costs down.

Company officials visited Japan and later South Korea. They were determined to exhaust every domestic alternative before they sourced in Southeast Asia. That's when they found the Choctaw reservation.

Labor rates at the Indian reservation are not as low as in South Korea and Mexico, but they are lower than other places in the U.S. South Koreans make about $8 a day; Mexicans are paid about 80 cents per hour. An average assembler on the Choctaw reservation makes about $5 an hour with benefits.

However, the reservation and the government provide other benefits. Health care is provided. Housing is built by the reservation and the cost is repaid, based on an individual's income. Also, Indians pay no federal taxes, only state taxes.

Renault officer named chairman in AMC shuffle

By Richard Johnson
and Richard Feast
Automotive News Staff

Renault's number two man, Pierre Semerena, has been elected chairman of American Motors, but Jose Dedeurwaerder retains control of the company—at least until he is recalled to France early next year for a promotion to Renault's top sales post.

The executive shakeup at AMC also gives added responsibility to Joseph E. Cappy, promoted from executive vice president to chief operating officer.

J. Paul Tippett, who stepped down as full-time chairman of AMC in April, will remain on the AMC board. He stepped aside as chairman of the directors' executive committee; Dedeurwaerder takes over that role.

Semerena will have more day-to-day involvement with AMC than Tippett had at the end of his term as AMC chairman. Semerena has resigned his Renault post to become full-time AMC chairman, responsible for relations with directors.

But the move is seen as a step down for Semerena, 60, who had been tapped as chief executive officer of Renault's automobile division by Bernard Hanon, who was ousted as Renault chief early this year.

Semerena is one of a string of Renault executives who have left or have been shuffled into new posts by the new chairman, Georges Besse.

Under Hanon, Semerena had been promoted above Pierre Tiberghien, Renault's former chief of auto operations and now inspector general of quality. The AMC executive shuffle takes Tiberghien off the AMC board.

He is being replaced by Allan Chapin (no relation to AMC's former chairman Roy Chapin), partner in the New York law firm of Sullivan and Cromwell. It is the law firm that represents Renault in the U.S.

Automotive News has learned from inside sources that Dedeurwaerder will be leaving the U.S. in the first half of 1986 to take a major post at Renault. He is expected to be in charge of all of Renault's marketing and sales operations; in addition, he will likely have responsibility for Renault manufacturing outside

Japan won't renew curbs on exports

By Jake Kelderman
Washington Reporter

WASHINGTON.—The Japanese Government said again last week that it will not extend its self-imposed limits on shipments of Japanese cars to the U.S. when current restrictions expire next March 31.

Speaking to reporters at a weekly press conference, Keijiro Murata, head of the Ministry of International Trade and Industry, said Japan "will not consider another extension of the voluntary restraints" which have been in place for the past five years.

Another extension of the restraints would be "out of the question, unless there is some exceptional," justification, he said.

The restraints on car exports were adopted by Japan in 1981 for a three-year period to give the U.S. auto industry a chance to rebuild in the wake of the 1980 recession. The limit set initially was 1.68 million cars. In 1984, the number was increased to 1.85 million, and last spring was boosted again to 2.3 million.

At that time, however, MITI made a point of noting that this would be the last year of the voluntary export quotas.

"The pronouncement made by MITI last week should be seen as an affirmation of its previously stated commitment," a source close to the Japanese Government said.

Japanese auto makers already control about 20 percent of the U.S. auto market even with export restraints in place.

The major makers also have opened, or are planning, manufacturing facilities in the U.S. capable of producing as many as 1.2 million units annually.

Industry analysts generally concede that even if import restraints were to remain in effect, the Japanese would continue to gain market share, perhaps to as much as 30 percent to 35 percent.

The Japanese auto makers have been adamantly opposed to their government's export restraints ever since they were initiated.

Sales of Japanese cars in the U.S. this year are expected to total about 2.2 million, up from 1.9 million in 1984.

Domestic stockpile hits 3-year high

By Kathleen Hamilton
Managing Editor

December opened with a 78-day supply of domestic cars—the highest level in more than three years.

The culprit clearly was sluggish sales, because the actual unit count, while a bit puffy, was nowhere near a three-year high. The 1,605,832-car stockpile was only a six-month high; there were slightly more cars in stock in May (1,615,026), but at that time sales were so strong that the stockpile was good for only 52 days.

No one was exempt this time—not even the Japanese-based U.S. operations. Each of the six U.S. auto makers saw an increase in their days' supplies as well as in their unit counts. American Motors and Ford Motor Co. had only marginal unit increases; the unit counts for the other four makers increased substantially.

Ford was the only maker with stocks at a healthy level (62 days), making it understandably reluctant to join in the latest round of industrywide incentive programs. But join it did, and then added dealer incentives for its only two high-volume models with heavy stocks, Thunderbird and Cougar. (Its high totals for EXP, LTD and Marquis are because these lines have gone out of production.)

It should also be noted that Ford's corporate days' supply was increased by 10,000 units as it began stockpiling Taurus and Sable in preparation for the

France, Australia to build Ford sports cars for U.S.

By Richard Johnson
Detroit Reporter

Ford Motor Co. has finally given a green light to its premium high-performance two-seat sports car, which will be assembled in France. Ford also has announced plans for a small, sporty car for North America that will be developed and produced in Australia.

Both cars will debut in the U.S. in the late 1980s and fit into specialty-car niches, rather than replace any existing models, such as the Mustang.

The two-seater program will be supervised by Ford Special Vehicle Operations. Input will come from several outside firms, including Chausson S.A., of Courbevois, France, which will assemble the vehicle and serve as the principal engineering contractor.

Ford is turning to ItalDesign in Turin for engineering design and developmental work on the Australian-built small, sporty car.

Louis Ross, Ford executive vice president—North American Automotive Operations, said the market for a premium, high-performance sports car "is a small but important one that reaches an influential group of buyers."

"We've been following this particular segment for some time, and we think the timing is right for Ford to have an entry in this market," he said.

Ford declined to spell out details of the two-seater program last week, but sources have identified it as the in-house-designed, mid-engined "GN34," which was apparently considered for the project along with ItalDesign's Maya, the Giugiaro-designed coupe shown at the 1985 Turin Motor Show. Ford consumer-tested both models and the GN34 reportedly emerged as the winner.

In recent months, Ford Chairman Donald Petersen and President Harold Poling have repeatedly expressed their enthusiasm for an SVO sports-car program. The 32-man motorsport, performance-parts and specialty-car operation was formed five years ago and is responsible for the high-tech, turbocharged SVO Mustang.

Ross last week called the high-performance sports car "exactly the kind of project we had in mind when we created SVO five years ago."

The GN34, which is expected to sell for about $25,000, will reportedly be powered by a 4-valve, naturally aspirated, 3.0-liter V-6 engine that will debut in mid-1987 on some Taurus/Sable and Lincoln models with capability of 200-250 HP.

The premium sports-car programs will put Ford four-square into a growing legion of upscale two-seaters from domestic auto makers, including the Chrysler/Maserati and General Motors' Cadillac Allante and Buick's GM33 two-seater project.

The small, sporty car will be developed and produced for North America and other markets by Ford Motor Co. of Australia, Ltd., according to Ross.

"Ford Australia's accomplishments with the Australian-designed and engineered Ford Falcon and its derivatives are proof positive of its capabilities as the leader in one of the world's most competitive markets," said Ross.

A Ford spokesman put the size of the Australian car "in the Fiero kind of range."

Pricing of the cars was not discussed by Ford last week. A spokesman said it has not been determined whether the cars will be distributed through both the Ford and Lincoln-Mercury dealer networks.

Ford has not announced expected volume figures, but they are expected to be low—probably in the 15,000-20,000 range for the premium sports car. Ross stressed that neither vehicle will replace the current Mustang or future Mustang-like vehicles. He said both cars are aimed at very specialized markets in which Ford currently has no North American entries.

The projects are reminiscent of Ford's approach to the Merkur XR4Ti, an upscale model built in Germany and marketed in the U.S. through L-M dealerships. That is, low-volume cars sourced and built overseas, but clearly intended for the North American market.

"It is just a matter of a different place, a different outfit doing it," said the Ford representative. "We have considerable experience in the areas of international design, assembly and shipping. The world is getting smaller every day."

Fastback fever

Chevrolet will offer a new sloped rear backlight option on the Monte Carlo SS. The fastback model will be available after Jan. 1, and the traditional Super Sport with formal glass treatment will continue to be offered.

Honda asked to recall 500,000 for belt flaw

WASHINGTON.—NHTSA has asked Honda to recall about 500,000 1979-81 Accords and Civics for failure of front seat-belt retractors. The problem was first identified in April, 1982.

American Honda said it is discussing the situation with NHTSA and so far has not agreed to recall the cars.

The Center for Auto Safety said Honda reported more than 140 complaints and told NHTSA it has covered 1,800 warranty claims about such malfunctions. NHTSA said there are 40 complaints.

But American Honda denied CAS charges that it has conducted a "secret warranty" program to reimburse those who complain but not those who do not. CAS likened that to an earlier problem Honda had when it shortened belts for a safety payoff but then had to provide longer belts when some could not be fastened around winter coats.

NHTSA has also sent a recall request to Neoplan USA Corp., asking for action on sudden rear-brake lockup. Neoplan is talking to the safety agency.

NHTSA also has upgraded three investigations to the engineering analysis stage. One involves more than six million General Motors 1978-81 A-cars—Chevrolet Malibu and Monte Carlo, Pontiac LeMans and Grand Prix, Buick Century and Regal and Oldsmobile Cutlass Supreme—for alleged loss of rear braking from rust on the rear backing plate. (The 1978-81 A-cars now are G-cars in GM's lexicon.)

CAS said that NHTSA began

Site of $800 million plant announced, amid hoopla

Toyota joins hands with Kentucky

By Jake Kelderman
Washington Reporter

LEXINGTON, Ky.—It's getting to be a familiar scene in the American hinterland: A horde of journalists, politicians and assorted capitalists descends on a small town for the long-awaited announcement of the site of a new assembly plant.

Recently, the Japanese auto makers have stolen the show. Last week it was Toyota Motor Corp.'s turn, and the location was Georgetown, Ky. (population about 11,000), 12 miles north of Lexington—in a region famous for its thoroughbred horses.

The cast in Georgetown, undaunted by Kentucky's December rain and mud, included Toyota Chairman Eiji Toyoda and President Shoichiro Toyoda, Kentucky Governor Martha Layne Collins, State Senators Wendell Ford (Democrat) and Mitch McConnell (Republican), Kentucky Republican Congressman Larry Hopkins and a host of lesser state and local officials.

Chairman Toyoda said the Georgetown site was chosen after a painstaking search and that he looked forward to a rewarding partnership with the people of the region and the state.

President Toyoda said he was especially proud to make the announcement because it was a way for the company to "return the warmth and loyalty that Toyota has always enjoyed in the U.S."

One day after the Kentucky announcement, Toyota officials traveled to Cambridge, Ont., southwest of Toronto, to announce the company will start construction on a $400 million (Canadian) assembly plant that will ultimately produce 50,000 Corolla-class cars and employ 1,000 persons.

Canadian production is scheduled to begin in 1988. The goal is to increase local content above 60 percent and to export cars immediately from Canada to the U.S. so

Takes first 4 places in Power's Initial Quality Study

Toyota tops in trouble-free survey

By Matt DeLorenzo
Los Angeles Reporter

LOS ANGELES.—Imports top the list of trouble-free new cars, according to J.D. Power & Associates' study of new-car quality.

Called the Initial Quality Study (IQS), the survey asked consumers to list the number of problems they encountered with their new 1985 cars within the first 2½ to three months of ownership.

Toyota dominated the list of trouble-free new cars, taking the first four positions with the Camry, Cressida, Tercel and Corolla. Honda took the next two spots with Civic and Accord, and Mercedes-Benz achieved the highest non-Japanese rating—seventh—with its 380 model.

Toyota placed six cars in the top 20, Honda had three, Mercedes three, Nissan two and Mazda one.

Chevrolet placed three cars in the top 20 with the Sprint, Citation II and Spectrum in 17th through 19th positions. Ford's Crown Victoria placed 16th, and the Dodge Colt placed 20th.

Since Sprint, Spectrum and Colt are built by Japanese car companies, only two domestically produced vehicles finished in the top 20. And Chevrolet has dropped the Citation.

J. David Power III said the study was undertaken as an outgrowth of his company's Consumer Satisfaction Index (CSI).

"We started getting questions about the CSI—that it tracks at the end of 12 months of ownership and is more dealer-oriented," he said. "The reason for the IQS is to get as early a reading from the buyer as possible."

The survey quantifies the number of problems encountered by the new-car buyer and gauges the effectiveness of the manufacturers' Pre-Delivery Inspection (PDI) systems and the car makers' ability to deliver problem-free cars.

Approximately 65,000 questionnaires were sent out and 30,000 were returned for a 45 percent response rate. Buyers were asked to check off whether they have had problems in 10 categories ranging from electrical/accessories to wind noise. Eighty items were rated.

The industry average for the average number of problems per 100 vehicles is 247, according to the IQS. The Japanese are well below that number with an average of 169 problems per 100 vehicles, while the European and domestic makes average 267 and 268, respectively, per 100 units. For the top 20 lines, the number of problems per 100 vehicles ranged from 109 for the Cressida to 184 for the Colt.

Asked why Toyota dominates the list, Power responded, "Toyota has always done well on tracking in the CSI. The product shows up

Bieber makes pitch for UAW at Toyota

DETROIT.—UAW President Owen Bieber has issued a statement lauding Toyota's decision to build an assembly plant in the U.S.

Bieber also made a pitch for union representation: "We know Toyota management has been very positively impressed by the UAW workforce employed by NUMMI in California. Based on that foundation, we look forward to developing a productive ongoing relationship as Toyota establishes additional manufacturing sites."

Buick considers building 'hybrid' wagon-minivan

FLINT.—A vehicle between a station wagon and a minivan appears to be in the future for Buick.

"We're trying to sort out what has happened in the van and all-wheel-drive Blazer markets," said Buick General Manager Donald Hackworth. "We believe there is a vacuum being created behind those segments."

Buick has a proposal to make a luxury station wagon positioned as an alternative to a minivan.

"That's one of the niches we've put as a very high priority," Hackworth said.

He said the vehicle would be a seven-to-nine-passenger wagon with all of the seats facing forward. The wagon would have load-carrying and trailer-hauling capacity, but with a luxury interior.

It is likely the vehicle will contain components from existing rear-wheel-drive Buick models. The engine would probably be a 5-liter V-8.

Oldsmobile is considering a similar station wagon and the two divisions would probably work together on the project.

Computer-generated car ads cut costs, C-E exec says

By Edward Lapham
Marketing Editor

The growing use of computer-generated automotive commercials can help reduce creative and production costs, according to Jim Nicoll, Campbell-Ewald vice president and special projects producer.

Once a vehicle's dimensions and specifications are programmed into the computer, reusing the computer-generated image is inexpensive, Nicoll told the Detroit Auto Writers Group.

"As long as the basic size and shape doesn't change and we only have to reload trim other other little detail things, it is inexpensive to reuse," Nicoll said.

Nicoll used last spring's Chevrolet Astro introduction campaign as an example.

He said the "parent" 60-second spot, which included the cost to load the vehicle into the computer, took 10 weeks and cost $800,000. A teaser ad, made before the parent spot was complete, used the "loaded" vehicle program and therefore took only 10 days and cost just $82,000.

Computer-generated images and special effects are best used to "grab your attention," Nicoll told DAWG.

Although special effects have worked well, Nicoll said most car makers are still predisposed to "jingle" advertising.

However, "media clutter" resulting from the number of breakaway advertising pods during TV programming and the profusion of 15-second spots will make special-effect advertising more popular because it can grab the viewer's attention through the use of "kinetic one-liners and explosions."

He said he believes that Chevrolet "will ultimately be the first" GM division to use stereo TV commercials because it traditionally has pioneered.

The current C-E creative approach on the Chevrolet account is avoidance of meaningless themelines.

"We're trying to define an attitude about Chevy rather than a set of words," Nicoll said.

"I think 'Today's Chevrolet' says that no matter which Chevrolet car or truck you drive, it will be up-to-date; no matter what you buy, it will be *au courant*."

Takes first 4 places in Power's Initial Quality Study

Toyota tops in trouble-free survey

Continued from Page 5

with the fewest problems." That fact also contributes to Toyota's high CSI rating.

"Every time we do one of these surveys, Toyota has the fewest number of people who have gone back with problems," Power said. "That's the best satisfaction there is—not having to take your car back in."

Power surmised that the two domestic cars that broke into the top 20 are there for different reasons. "They're older vehicles, more established cars. They've learned how to build them," he said, noting that the Citation II is no longer offered by Chevrolet. "Both cars popped up well in the CSI. They're also purchased by older buyers who are most likely to be less critical."

But why do the Japanese dominate? "I think there is a problem in making cross-comparisons," Power said of the relative performance of domestic versus Japanese cars.

"You can generally conclude that the Japanese have been making improvements in design and production and have cut down the number of initial quality problems. While the domestics are working hard at improving, the Japanese are a moving target—making more improvements. The problem for the domestics is to leapfrog the Japanese. The Japanese are turning cars around faster and introducing new technology at a faster rate."

So while the domestic manufacturers are improving quality tremendously, the Japanese are keeping pace.

Power sees danger in overemphasizing improvements in domestic cars through advertising. "Every time you see ads for quality, we as an industry are raising customer expectations even more," he said.

Those expectations have already been raised to the point that customers no longer want to be part of the PDI (pre-delivery inspection) loop. "That philosophy is still out there and the warranty policy contributes to it," Power said.

"The salesman tells the owner when he picks up the car that there may be some minor problems and to make a list and bring the car in at 3,000 miles and they'll be taken care of. That kind of philosophy breeds dissatisfaction in today's market."

Power sees more manufacturers taking over PDI for uniform quality control. "Some dealers can take care of it (proper PDI) and some don't," he said.

The IQS revealed that about 60 percent of the problems reported had been taken to the dealership at the time of the survey. The remaining 40 percent were either small enough that the owner waited for the next scheduled maintenance or took them elsewhere.

Of the problems taken to the dealerships, domestic and European dealerships scored higher (45 and 46 percent, respectively) in the percentage of problems that were entirely corrected. Dealerships handling Japanese imports corrected 42 percent of those problems.

"What you have to do is look at the net unfixed problems," Power said of those percentages. "Factory prep and port-of-entry prep are so good that the problems easily correctable are caught. If you can cut down on the number of (those) problems . . . chances are that the problem the dealer ends up taking in is something he can't correct."

In other words, paint or a piece of trim can be fixed easily and should be taken care of before the car is released, while wind noise or a driveability problem—one relating to basic vehicle design—is virtually impossible for a dealer to correct.

Engine/driveability difficulties were the problems respondents cited most often in the IQS study. Seventeen percent of the respondents reported such problems at delivery or afterward. That category was followed by electrical/accesories at 15 percent and exterior paint/moldings, interior trim and squeaks/rattles at 11 percent each.

Japanese cars led—with 17—in the fewest engine problems per 100 cars, followed by the European makes with 37 and domestic cars with 47 per 100.

The individual power plant that recorded the most engine-related problems per 100 cars was the Jaguar V-12, with 76 per 100 vehicles, while the lowest was the Mazda rotary with 11. By model, the Toyota Cressida—with seven—had the fewest engine-related problems per 100 vehicles, and Ford's Tempo/Topaz had the highest number: 103.

By engine type, 4-cylinder engines had the highest number of engine-related problems (43 per 100), while V-6 and V-8 powerplants recorded slightly lower rates. By manufacturer, Toyota reported the fewest engine problems per 100 cars—14; Chrysler, with 66, had the highest number, the study said.

In exterior paint and trim, the Japanese outscored European and domestic makes by recording only 21 problems per 100 cars, while the other two logged 25 and 32 problems per 100, respectively.

Power said the value of the study goes beyond identifying major problem areas in that "it allows the manufacturers to discover any latent or submarginal items that may give a problem—things that the buyer won't take into the dealer immediately. It's coming to a point where the manufacturers have to respond quickly" to those types of problems.

New-Car Problems

Model	Total problems per 100 vehicles
Toyota Camry	109
Toyota Cressida	122
Toyota Tercel	127
Toyota Corolla	133
Honda Civic	137
Honda Accord	143
Mercedes-Benz 380	144
Toyota Celica	150
Mercedes-Benz 500	151
Toyota Supra	156
Nissan Sentra	157
Mercedes-Benz 300	159
Honda Civic CRX	165
Mazda RX-7	165
Nissan 200-SX	170
Ford Crown Victoria	171
Chevrolet Sprint	172
Chevrolet Citation II	173
Chevrolet Spectrum	184
Dodge Colt	184

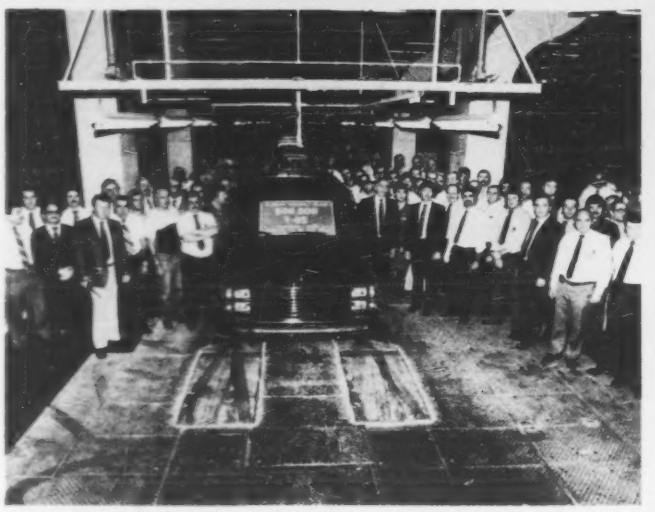
In Japan, AMC goes with Kinki

TOKYO.—Kinki Shibaura Auto Service Co. has reached an agreement with American Motors to market AMC's vehicles in Japan.

Kinki Shibaura—which is owned equally by Kinki Motors Co. and Kinki Nippon Railway Co.—has targeted sales of 200 AMC vehicles annually: 50 percent Jeeps, 40 percent multipurpose cars and 10 percent larger passenger cars.

AMC is considering phasing out Jeep Japan, Ltd., its wholly owned subsidiary which has been selling AMC vehicles in Japan since 1982.



Minivan milestone

Chrysler Corp. has produced its 500,000th minivan—a dark red 1986 Plymouth Voyager LE destined for a Chrysler dealership in Salem, Ill. Minivans have been built at Chrysler's Windsor (Ont.) assembly plant since October, 1983. More than 1,000 minivans are built at the Windsor plant each day.

She wanted to talk to Toyota

Land owner wouldn't sign

The life of Georgetown (Ky.) resident Marilyn Singer has not exactly been disrupted by Toyota's announcement that it will build an assembly plant in her town. But things began to get unpleasant for her a couple of weeks ago.

She was at work one day when John Cooper, whom Singer describes as "involved in real estate in Scott County and an aide to Joe Prather, president pro tem of the state senate," came in and asked if he could drive her to the bank.

Her signature was needed, she was told, so the state could acquire a 136-acre parcel of the 1,500 acres Toyota wanted for its facility.

The parcel is a cattle farm owned by Singer's mother-in-law and managed under contract by Singer's husband.

"Cooper offered to drive me to the bank, but I told him I preferred to take my own car," Singer said.

Waiting for her at the bank were members of the Kentucky Economic Development Corp.—a former sheriff who now has a state job, a bank officer, Kentucky's commerce secretary, a lawyer for the State of Kentucky and her husband—"all men," Singer noted, "and I really felt abused as a woman when they began to put the pressure on me."

"They told me they absolutely had to have my signature then and there," for the plant to be built in Georgetown.

"I'm not a women's libber by any means, but nobody should have to make a decision under that kind of pressure," she said.

Singer didn't sign that day, and she still hasn't signed.

"Now they've decided they don't need my signature after all," she said. "It's a very complicated matter—but when my husband's contract comes up for renewal in March, his mother just won't renew it." The land will then be sold to the state, at $6,000 an acre.

"If they had handled it better, they'd have had my signature," Singer said. "But they insisted that they needed it that very day.

"I wanted to take my time. I wanted to talk to Toyota to get some assurance that if they came in here and changed everything, changed people's lives, they'd stay," Singer said.

"But I was told it was a federal law that foreign companies can't negotiate directly with the people," she said.

"Well it doesn't matter now, does it? They don't need my signature after all."

Informed that there was a picture of downtown Georgetown in a Detroit newspaper and that her hometown looks nice, Singer replied, with a smile in her voice, "It is!"

Site of $800 million plant announced, amid hoopla

Toyota joins hands with Kentucky

Continued from Page 5

Toyota's North American operations conform to the U.S.-Canada auto pact requirements, Toyota said. That would allow Toyota to bring cars across the border duty-free in both countries.

Toyota will build as many as 200,000 units a year of a version of the Toyota Camry at the Kentucky plant when it comes on stream in mid-1988. President Toyoda said the company hoped to bring together at the plant the best that Japan and the U.S. have to offer as well as the best of worldwide advanced technology.

"Whether the UAW is part of that effort will have to be decided by the workers," he said when he was asked if the company will invite the union in, as Mazda has at its facility in Flat Rock, Mich.

President Toyoda also said that the decision to build a plant in the U.S. was simply a logical step in Toyota's evolution and a recognition of the fact that the U.S. is its biggest market.

"Voluntary import restraints played no part in this decision," he said.

Toyota hopes to reach sales of one million units in this country by the end of the decade; it does not have the production capacity in Japan to achieve that goal.

The new plant will be located on a 1,500-acre site in the rolling farmlands adjacent to Interstate 75. In addition to an assembly line, the complex will house a stamping plant and other facilities as yet unspecified.

Toyota will import engines and drivetrains for the cars, but company officials said local sourcing and U.S. labor would result in a vehicle with 50 percent domestic content.

Toyota, the biggest of the Japanese auto makers, received offers from 30 states to locate within their borders. S. Tamura, head of Toyota's site-selection committee, said that all the states made very attractive offers but that in the end, it was an ephemeral sense of "rightness" that won the day for Kentucky.

Collins would not say how much the state provided in incentives to Toyota, but the amount is believed to be in line with inducements that Illinois and Michigan extended to Mitsubishi Motors Corp. and Mazda Motor Corp.—about $150 million to $250 million.

A local official who wished not to be identified suggested that to get the Toyota plant, Kentucky "gave away the store."

Whatever the case, Toyota now becomes the fifth Japanese auto maker with assembly facilities in the U.S. By 1989, when they are all on line, those plants will be capable of producing some 1.1 million cars and trucks a year.

Toyota joins Nissan, Honda, Mitsubishi and Mazda as a U.S. producer. The Nissan plant in Smyrna, Tenn., and the Honda facility in Marysville, O., are already in operation. Mazda is building a plant in Flat Rock, Mich., and Mitsubishi will construct one in Bloomington-Normal, Ill., in a joint venture with Chrysler Corp.

Toyota and General Motors also are engaged in a joint venture in Fremont, Calif., that builds the Chevrolet Nova.

Ford Scorpio named Car of Year in Europe

LONDON.—The Ford Scorpio has won the latest European Car of the Year award.

It scored 337 points in a competition involving 56 auto writers from 17 European countries. The U.S. version of the Scorpio will be sold by L-M dealers next fall.

Austin Rover names XX

LONDON.—Austin Rover confirmed it will call its Project XX car Sterling in the U.S. and 800 in Europe. Austin Rover's version of the vehicle, developed with Honda, is to be launched in Europe this summer and in the U.S. early in 1987.

Method of figuring carryforward credits challenged

EPA sued on CAFE adjustment

By Helen Kahn
Washington Bureau Chief

WASHINGTON.—A suit against EPA challenging the legality of seven years of retroactive adjustment of CAFE levels as well as the appropriateness of the relief has been filed by the Center for Auto Safety, Public Citizen, Environmental Policy Institute, and the Union of Concerned Scientists.

The Automobile Importers of America, Ford Motor Co. and General Motors are intervenors in support of EPA.

The suit—like others filed by the same groups—may affect the size of carryforward credits that auto companies have used to offset CAFE shortfalls. However, it may be a year or more before a settlement is reached.

The decision could affect the amount of the fine assessed against Jaguar for missing the 1983-84 standard (Automotive News, Dec. 9).

The suit, filed in the U.S. Court of Appeals for the District of Columbia Circuit, stems from the 1975 CAFE law. That law required EPA to rule on the effect on measured CAFE of changes in the test procedures from those used for 1975 models. Thus, auto makers were given some allowance in meeting CAFE.

In mid-1979, Ford and GM petitioned EPA to upgrade CAFE ratings starting with 1980 models. EPA eventually ruled that it would make both retroactive and prospective allowances, but would not offset those to account for other changes which had boosted auto makers' CAFEs over the 1975 level.

The suit was filed by the same consumer groups that have challenged the NHTSA CAFE rollback for 1986 passenger cars and 1985 and 1986 light trucks. The groups have also challenged NHTSA's failure to issue CAFE standards for light trucks for the 1987 and 1988 model years to accord with the law's timetable.

The suit says EPA should not have given retroactive allowances stretching back to the 1980 model year.

According to the plaintiffs, the law requires that any CAFE adjustment be set by regulation at least one year before the start of the pertinent model year.

The lawsuit says, "As to four of the adjustments made here, the manufacturers did not petition for an adjustment until it was too late to issue a rule affecting the 1980 or 198. model years; the other three were not sought until 1984 and were not adopted until June, 1985, thus making any adjustment improper until the start of the 1987 model year."

The second part of the suit says that "if EPA is legally entitled to make such retroactive adjustments, and if the agency decides to adjust mileage ratings to make the results 'comparable' to the results attainable under the 1975 model-year procedures, then 'comparable' means 'comparable.'"

In other words, "EPA's decision to adjust reported mileage ratings in one direction, but not the other, gives manufacturers an undeserved windfall, contrary to the conservation goals of Congress."

The suit—on behalf of consumers interested in owning and using the most fuel-efficient cars possible—claims injury because the adjustment gives credits estimated to be worth $540 million to GM and $245 million to Ford. In addition, says the suit, such valuable credits diminish the auto makers' incentives to market a spectrum of fuel-efficient vehicles.

In July, 1979, when GM and Ford initially asked EPA for adjustments for four changes in test procedures, EPA refused because it said no changes were needed. But the Sixth Circuit Court of Appeals disagreed and ordered EPA to start rulemaking. The consumer groups concede that some retroactive adjustment may be allowed —but not so far back as the 1980 model year.

Another issue of concern to the plaintiffs is that the auto makers take their lumps for boosted CAFE levels as well as enjoy the benefits of revised levels. In other words, EPA must be "neutral" in taking into account all "legitimate changes" that affect fuel-economy levels. The two highly technical matters involved here are use of "coastdown techniques" and mileage accumulation limits.

That issue was not addressed in the 1979 petition or the 1980 EPA rule; in fact, say the plaintiffs, it did not "formally arise" in the context of fuel economy until the 1983 proposed rule. Thus, if plaintiffs read the law correctly, EPA acted properly in making CAFE adjustments prospective only.

"If petitioners do not prevail on that issue, however, and if upward adjustments to manufacturer CAFE ratings are permitted retroactively, then an appropriate offsetting adjustment should be made to take these negative adjustments also," the suit says.

Rapido Merkur XR4Ti

Rapido Group, Palentia, Calif., offers an intercooler for the Merkur XR4Ti. The standard Merkur engine produces 175 HP at 5,000 RPM. Rapido says its stainless-steel, free-flow exhaust system and the turbocharged intercooler boost HP to 190.

FTC grants Wisconsin another stay of U.C. rule

WASHINGTON.-Wisconsin has been granted another stay of the effective date of the FTC's used-car rule.

The extra 180 days, due to expire June 3, 1986, continue a stay that expired Dec. 5.

During the extension, FTC will continue reviewing Wisconsin's petition for an exemption from the federal rule.

Last October, Wisconsin's Department of Transportation informed FTC it will consider changing its regulation to conform more closely with the FTC rule, which was effective last May 9.

The FTC rule requires a window sticker with warranty information and other data, including the suggestion that consumers ask about getting an independent examination and appraisal before purchase and a warning not to rely on oral promises from salesmen.

However, it does not include a list of "known" defects—the major bone of contention in the convoluted and litigious story of the FTC used-car rule.

Wisconsin's DOT has sent a letter to FTC, agreeing to consider a number of changes. They include adding to its existing window sticker the FTC provisions on spoken promises, pre-purchase inspection and specific warranty data; the FTC type size for "warranty" and "as is" data, and a statement that the auto inspection provisions on the sticker are not part of the dealer-consumer contract.

Since the Wisconsin regulation already in effect does require dealers to inspect cars and check off a window sticker list, FTC said the extra extension is not likely to hurt used-car buyers and may avoid unnecessary expense to the state's dealers.

The vote to extend the stay was 2 to 1, with Commissioner Patricia P. Bailey dissenting.

Nissan minivan slated for U.S. 'soon,' Kume says

Continued from Page 4

However, he said, Nissan is not at this time considering establishing a separate sales channel to handle such a new market entry. But he noted that in order to approach such a new-car segment, a move to a separate sales network may be a future consideration.

Kume said Nissan also would like to build a larger car with a larger engine for both domestic sales and exports. He also said the company is preparing to redesign its large President model, which is currently sold only in Japan.

Kume said Nissan may export the next President model because "the domestic market would not be large enough to justify the investment."

Kume said that if the yen continues to grow stronger against the dollar, "we may have to reflect the change in the regional prices of the cars." He did not rule out further price hikes to accompany its recent 4-percent boost on cars.

Kume said he envisions stiff competition in the small-car segment in the U.S. because of the strong yen.

"We are at a disadvantage because of the strong yen," he said. "One thing we may have to do is increase the local content of the vehicles we produce in Smyrna, Tenn."

obituaries

Matthew M. Moriarty Sr.

MANCHESTER, Conn.—Matthew M. Moriarty Sr., 82, founder and board chairman of Moriarty Bros. (Lincoln-Mercury-Mazda), died Dec. 1. Mr. Moriarty was a past president of the Lincoln-Mercury Dealers Council of New England and the Connecticut Automotive Trades Assn.

Irving J. Demarest

WESTWOOD, N.J.—Irving J. Demarest, 98, died Dec. 1. Mr. Demarest founded I.J. Demarest, Inc. (Chevrolet), in 1914. When he retired in 1982, he was Chevrolet's senior dealer. The dealership is now under the direction of Mr. Demarest's grandson, Roger T. Demarest.

Domestic-car stockpile moves up to 3-year high

Continued from Page 3

models' first sales day, Dec. 26. Those models added two days to the Ford corporate supply level.

For comparison purposes, this month's domesticdays-supply figure of 78 days was well above the 65-day level of a month earlier and 58 days a year earlier. The domestic industry considers 65 days' worth of cars on the high side of the ideal range.

The Dec. 1 unit count of 1,605,832 compares with 1,433,567 one month earlier and 1,405.417 one year earlier.

This month's inventory shares: General Motors, 62.69 percent; Ford, 19.00 percent; Chrysler Corp., 14.04 percent; AMC, 2.60 percent; Volkswagen, 1.18 percent; Nissan, 0.26 percent, and Honda, 0.23 percent. (All figures for VW, Nissan and Honda in this story are for U.S. auto production only.)

One month ago the shares were: GM, 61.59 percent; Ford, 20.28 percent; Chrysler, 13.63 percent; AMC, 2.86 percent; VW, 1.18 percent; Nissan, 0.27 percent, and Honda, 0.19 percent.

By size class, the Dec. 1 inventory was split this way: Subcompact, 16.54 percent; compact, 22.04 percent; intermediate, 39.47 percent; standard, 11.02 percent, and luxury, 10.93 percent.

One month earlier the split was: Subcompact, 17.09 percent; compact, 21.54 percent; intermediate, 37.91 percent; standard, 11.36 percent, and luxury, 12.10 percent.

Domestic models by size class and days' supplies on Dec. 1:

Subcompact—Encore, 244; EXP, 164; Laser, 134; Fiero, 133; Nova, 115; Pontiac 1000, 109; Alliance, 108; Daytona, 98; Turismo, 92; Charger, 91; Omni, 89; Horizon, 83; Golf, 77; Chevette, 59; Lynx, 54; Escort, 36, Sentra, 18, and Honda, 8.

Compacts—Capri, 127; Eagle, 122; Skyhawk, 111; Firenza, 110; Cimarron, 108; LeBaron, 91; Sunbird, 86; Aries, 85; Camaro, 85; Cavalier, 83; Reliant, 79; Mustang, 68; Firebird, 66; Tempo, 47, and Topaz, 45.

Intermediate—Regal, 154; Grand Prix, 148; Somerset Regal, 136; Bonneville, 125; LTD, 110; Marquis, 108; Century, 107; Cutlass Supreme, 104; Citation, 102; Cougar, 100; Lancer, 99; Thunderbird, 93; Dodge 600, 90; Monte Carlo, 90; Calais, 87; LeBaron GTS, 82; Pontiac 6000, 75; New Yorker, 73; Caravelle, 72; Cutlass Ciera, 68; Celebrity, 61; Grand Am, 32, and Skylark, 5.

Standard—Parisienne, 126; Chevrolet, 100; Plymouth, 89; LeSabre, 82; Crown Victoria, 72; Grand Marquis, 65; Diplomat, 64, and Olds 88, 59.

Luxury—Electra, 137; Corvette, 115; Cadillac, 81; Olds 98, 67; Seville, 65; Toronado, 61; Continental, 59; Mark VII, 58; Riviera, 57; Eldorado, 53; Lincoln, 41, and Fifth Avenue, 34.

First time since 1979

Makers build 8-millionth car

By Kathy Boyer
Detroit Reporter

U.S. makers produced their eight-millionth car of the year last Friday (Dec. 13). It is the first year since 1979 that the manufacturers have reached that mark.

The auto makers built 8,418,369 cars in 1979.

So far this year, 8,018,075 units have been assembled, 4.83 percent more than the 7,648,379 cars completed last year at this point.

Last week's estimated output of 183,112 units was 3.15 percent below the previous week's 189,068, when 16 plants worked Saturday (Dec. 7) overtime.

The prior week's build was the highest since the week ended Dec. 15, 1984, when 189,998 cars were assembled.

The scheduled production for last week dipped 3.62 percent from the year-ago week's total of 189,998, which was the highest week's build of 1984.

Companies shared last week's estimated production as follows: General Motors, 60.12 percent; Ford Motor Co., 17.69 percent; Chrysler Corp., 15.25 percent; Honda of America Mfg. Co., 2.01 percent; American Motors, 1.50 percent; Volkswagen of America, 1.28 percent; Nissan Motor Mfg. Co., U.S.A., 1.11 percent, and New United Motor Mfg. Co., 1.04 percent.

AMC's Kenosha plant resumed production last week after being closed for two weeks for inventory adjustment.

GM scheduled Saturday (Dec. 14) overtime at the following plants: Janesville, Wis.; Leeds, Mo.; Lordstown, O.; Orion Township, Mich.; Willow Run, Mich.; Doraville, Ga.; Framingham, Mass., and Oklahoma City.

Ford has scheduled daily overtime this week (Dec. 16) at these plants: Lorain, O.; Dearborn; Wixom, Mich.; Edison, N.J.; Wayne, Mich., and Kansas City.

Overtime was slated for three Chrysler plants last Saturday (Dec. 14): Belvidere, Ill.; Newark, and St. Louis (No. 2).

Those plants are scheduled for daily overtime this week.

Saab to pay for repainting 1976-78 cars from Belgium

By Jake Kelderman
Washington Reporter

WASHINGTON.—Under a proposed consent agreement reached between the FTC and Saab-Scania of America, owners of 1976 through 1978 Saab cars whose paint has peeled will be reimbursed for any paint-related repairs made on their cars

About 1,100 cars might be affected.

According to a complaint filed by the commission, the cars in question were produced in Saab's plant in Malines, Belgium, and were improperly prepped before being painted. Saab closed the Malines plant in 1978.

The FTC said Saab "knew or should have known about the paint problem by Dec. 31, 1977, but failed to disclose the existence of the problem or possible repair costs to prospective purchasers."

Under the terms of the consent agreement, Saab will offer to repair or make reimbursements to original buyers of Belgian-made Saabs who purchased the cars after Dec. 31, 1977, and to subsequent owners who bought the vehicles within 36 months of the original purchase.

Paint problems must have occurred within the first 36 months of original ownership and, in the case of a reimbursement request, the original repairs must have been paid for within the first 42 months of ownership.

According to the FTC's Boston regional office, the needed repairs run from $800 to $2,000. Under the consent agreement, Saab will pay up to $2,000.

The agreement between Saab and the FTC does not include cars sold in Massachusetts, where the state attorney general previously reached an agreement with the company.

Nor will Saab notify owners in Vermont and Maine of its agreement with the FTC; the company had settled the matter earlier in those states as well.

A Saab spokesman said the company had agreed to the consent order at least a year ago because it "had a continuing interest in the quality of its cars and the satisfaction of its customers."

Meanwhile, FTC sources indicated the commission is also in the final stages of completing a consent agreement with Volkswagen U.S., Inc., regarding valve stem seal and oil consumption problems in early-model VW Rabbits, Dashers and Audi Fox vehicles.

The alleged problem is considered to be responsible for engine seizures and damage in those vehicles. In its original complaint against Volkswagen, the FTC charged that the company knew or should have known about the problem as early as 1976.

Truck production climbs to 83,121, best since 1978

Domestic truck makers' estimated production of 83,121 units last week was the highest since the week ended Oct. 20, 1978, when 84,623 trucks were assembled.

The scheduled build was 2.96 percent more than the previous week's 80,731.

Last week's scheduled production was 20.10 percent more than the year-ago week's 69,207.

So far this year, 3,232,093 trucks have been assembled, 6.28 percent more than the 3,038,136 completed last year at this point.

General Motors scheduled overtime Saturday (Dec. 14) at the following plants: Baltimore; Janesville, Wis.; Lordstown, O.; Lorain, O.; Pontiac West (No. 2); St. Louis, and Shreveport, La.

Ford Motor Co. has slated daily overtime this week (Dec. 16) at Wayne, Mich.; Kansas City; Norfolk; Twin Cities; Lorain, O., and Louisville.

Chrysler's Warren (Mich.) plant was scheduled for Saturday (Dec. 14) overtime and for daily overtime this week.

Canadian trucks pass 800,000 eight days early

Canadian truck makers built their 800,000th truck last Friday (Dec. 13), eight days ahead of 1984's pace.

Year-to-date, 800,424 trucks have been assembled, 1.72 percent more than the 786,874 completed last year at this point.

Estimated production of 19,197 trucks last week was down 0.31 percent from the previous week's 19,256 but was 10.88 percent more than the year-ago week's 17,313.

Canadian auto makers scheduled production of 26,564 cars last week. If the total matched the expectation, it was the highest since the week ended May 14, 1983, when 27,994 cars were assembled.

Last week's targeted build was 2.77 percent more than the previous week's 25,847—the highest actual production of any week since the week ended May 14, 1983.

Last week's total was 29.42 percent more than the year-ago week's 20,525.

So far this year, 1,054,362 cars have been assembled, 4.45 percent more than the 1,009,438 completed last year at this point.

Christmas on the assembly line

Joe Wilssens

Yuletide spirit takes over in industry

Production has halted at the Fiero plant in Pontiac and a Christmas tree dominates the assemby line. All domestic auto plants closed for the holidays last Friday (Dec. 20). Fiero workers will have a longer holiday. The plant will be closed until Jan. 20 to prepare for the new Fiero GT and also for inventory adjustment.

A Christmas Fantasy

Or, Season's Grittings from Detroit, as before

'Twas the night before Christmas and all 'round the world,
All the competitive flags were unfurled.
In Europe, six makers were ranked neck and neck
And others were coming on fiercely, by heck.
New nations were starting to build their own cars
With their feet in the mud but their heads in the stars.

In Detroit itself, the year's No. 1 problem:
The Japanese makers and how we might hobble 'em.
When VRA died and the import tide gained,
It was all for our welfare, as Reagan explained.
The Japanese makers invaded with bricks—
Planned putting up factories way out in the sticks.

GM talked up Saturn and set off a race
By most of the states to find it a place.
In the end, it came down to a farm at Spring Hill;
In a right-to-work state, it just fit the bill.
The whole Saturn affair was a press agent's dream,
But when it appears, will it still have its steam?

The year was a year of big acquisitions
As auto firms vied to enhance their positions.
GM put up billions, got Hughes on its terms,
While Chrysler bought Gulfstream and two credit firms.
Ford got First Nationwide and New Holland, too,
The Big Three may sweat when the payments come due.

New-model debuts got screwed up at Ford,
And original dates were largely ignored.
The BOC debut left GM quite miffed;
There were not enough cars—some dealers got stiffed.
Some import showrooms ran close to clear dry
While supplemental stickers were rising sky-high.

Then Santa hit town, with a mid-engine sleigh,
His eight tiny reindeer couldn't make the CAFE.
Then I heard him mutter to mid-winter breezes,
"Daihatsu, Suzuki—I thought they were sneezes."
I saw him turn then with his fat little tummy
And head out of town, in the direction of NUMMI.
But I heard him exclaim as he faded from sight,
"Merry Christmas to all, may your New Year be bright."

Buick mulls wider export of 2-seater

By Michelle Krebs
Financial Editor

FLINT.—Buick may export not only its upcoming two-seater but also the manufacturing process to produce the car.

The yet-to-be-named car will be introduced in the U.S. as a 1987½ model with 25,000 units expected for the first year.

In an interview with Automotive News, Buick General Manager Donald Hackworth said that the manufacturing process for the two-seater is a "turnkey" operation. That means a system can be set up as a stand-alone operation and, once installed, can be run by the buyer of the system.

Code-named GM33 or Reatta, the car was designed by General Motors and will be produced at the Buick-Oldsmobile-Cadillac plant in Lansing.

GM went to London to figure out a way to manufacture the car.

The British firm, Hawtal-Whiting, worked on the engineering

Japan's threat to end quotas is trial balloon

By Francis J. Gawronski
Tokyo Bureau Chief

TOKYO.—Although the president of Toyota advocated the lifting of the voluntary restraints on auto exports to the U.S., Japanese Government officials have been adamant in their declarations that no decision has been made to end the export quota.

The latest auto-quota controversy hit the fan when an unidentified official at the Ministry of International Trade and Industry (MITI) was quoted by some of the Japanese press as saying that voluntary restraints on auto exports, measures originally taken in 1981 to give the U.S. auto industry time to recover, will end in 1986 "unless there is some exceptional" justification.

When queried on the statement, MITI had no official comment, but later said no decision has been made.

Automotive News sources said the statement about ending the quotas was made by Keijiro Murata, head of MITI, during a briefing with the Japanese press.

A few days later, Japanese and U.S. officials also said Japan has not decided whether it will extend voluntary restraints on car shipments to the U.S. when the current ceiling on export expires next March.

Prime Minister Yasuhiro Nakasone told Howard Baker, former U.S. Senate majority leader, who was visiting Japan, that no decision has been reached yet on whether Japan will continue the restraints in the next fiscal year, which starts next April.

Nakasone made the comment after Baker expressed apprehension about the probable harmful effects on the bilateral economy if Japanese auto makers are permitted to export without quotas.

Masao Omichi, deputy director of MITI's Automobile Division, said he informed a diplomat from the U.S. Embassy here that "nothing has been decided. Japan is watching the situation. It is not the time to decide anything."

Another official of MITI's Automobile Division, Naoki Kuroda, also was quoted as denying that any decision has been made about the quota system.

"We are observing the situation," he said. "But there has been no review and no decision on the part of MITI."

Kuroda said that whatever initial remarks were made by MITI about the voluntary restraints only reflect the fact that the restraint program is scheduled to expire automatically on April 1.

"It is nothing more than that," he said.

A U.S. embassy spokesman was quoted as saying that the embassy had contacted officials at MITI and "they told us what their official position has always been—that no decision has been made yet."

The spokesman did not give further details, but he said that "no further discussions on the issue" were planned.

The only Japanese automotive executive who officially commented on the controversy was Shoichiro Toyoda, president of Toyota Motor Corp., and those

1985 auto production is highest since 1979

Domestic auto production in 1985 is the highest in six years, according to preliminary figures.

The year's output of 8,182,084 is the best since 1979's 8,418,369. The 1984 total was 7,777,721.

The estimated 1985 truck production of 3,305,397 is the best since 1978's 3,676,747. Truck production totaled 3,146,356 in 1984.

Production details are on Page 31.

Counting cars: A task simplified

By Louise Kertesz
Detroit Reporter

In the 1970s, a plant in Lordstown, O., was making as many as 100 an hour. The most popular model this year is assembled at the rate of about 10,000 per week. During the U.S. industry's best years, the annual total climbed to almost 13 million.

Every week, people in public relations pass the figures on to the press: How many cars and trucks were made last week, how many are scheduled to be built this week.

Reporters and analysts crunch the numbers in calculators and PCs. The results are printed, sent over newswires, displayed on electronic signs along Detroit freeways and otherwise broadcast to the world.

In recent years, auto makers have seemed happy

Tally is highest in nearly three years

Import stockpile surges

By Kathleen Hamilton
Managing Editor

The stockpile of imported cars in the U.S. rose to the highest in nearly threeyears as December opened.

If that report sounds familiar, it is: It's nearly a repeat of the domestic-car summary for this month. Nearly. But in one vital respect, the imports' situation is a world apart from the domestics'.

Not since March, 1983, when 316,745 units represented a 41-day supply, had the import stockpile been so large.The imports' high inventory—304,079 cars—would last only 31 selling days at the rate they were going last month.

In sharp contrast, the domestics' unit count wasn't very much higher than the rest of this year, but their selling rate was so low that the units would last for 78 selling days—about three months. It was that 78-day supply that was the highest in more than three years.

Stocks were just dandy for import trucks this month, too. Both the unit count (103,138) and the days' supply (41) were the highest in 10 months. But 41 days is right there in the "ideal" supply range, generally considered to be 35 to 70 days' worth for importers.

The import-car count of 304,079 compared with a month-earlier total of 276,006 and a year-earlier figure of 232,152. The latest days-supply figure for cars (31 days) compared with 28 days on Nov. 1 and 27 days on Dec. 1, 1984. And it was well within the range where it has hovered all this year.

There was only a handful of import lines with big month-to-month changes: BMW's and Merkur's big jumps in days' supply were due almost solely to increased shipments; their daily selling rates remained stable. Mercedes-Benz cut its days-supply figure solely through increased sales; its unit inventory was steady. And the increase for Peugeot was due to a combination of lower sales and increased inventories.

Import-car inventories were split this way on Dec. 1: Japan, 63.59 percent; Germany, 26.06 percent, and other countries, 10.35 percent.

One month earlier, the shares were Japan, 65.25 percent; Germany, 23.87 percent, and other countries, 10.88 percent.

All inventory figures in this story refer to landed inventory: At ports, enroute to dealerships and at dealerships.

With the exception of Nissan truck figures—which include the Tennessee-built units—the figures do not include foreign-based makers' U.S.-built vehicles. The figures for the domestically built Hondas, Nissan Sentras, Volkswagens and Renaults are recorded separately (Automotive News, Dec. 16).

The latest truck count (103,138)

Teamwork triumphs

Volkswagen, Pennsylvania and the UAW teamed together to make VW's plant in Westmoreland, Pa., a reality in 1978, and now the trio is celebrating the completion of the one-millionth VW built in the U.S. From left are Owen Bieber, UAW president; Donn Viola, VW Westmoreland plant manager, and Pennsylvania Gov. Richard Thornburgh.

Drug-abuse statistics for plants challenged

By Jake Kelderman
Washington Reporter

WASHINGTON.—Contrary to reports published elsewhere, there has been no U.S. Government study on the use of drugs and alcohol by U.S. auto workers.

Stories in at least two Detroit-based publications reported that at least 30 percent of those applying for jobs at auto plants are alcohol and drug abusers, that as many as 35 percent of workers use drugs or alcohol on the job and that such abuse is adding at least $175 to the price of the average American car.

Automotive News interviews with experts in workplace drug use and with auto and union executives paint an entirely different picture, however.

"There's no doubt we have a drug problem in this union but it is no more than reflective of this society at large," said Reg McGhee, of the UAW.

"Where these kinds of numbers come from is beyond me," he said, adding to the apparently erroneous stories.

The numbers were also challenged by Dr. Michael Walsh, chief of the National Institute of Health's Clinical and Behavoral Pharmacology Research Center in Washington. NIH allegedly developed the figures quoted.

"There really is no hard data at all on workplace drug and alcohol abuse," he said. "These percentages are not based on fact and have been around since the early '70s. They don't mean anything.

"We suspect that any abuse that might be occurring would be similar in pattern and scope to society at large, but that is only an educated guess," he said. "We're only just now thinking of funding a study on what is going on in the workplace.

Walsh recently testified on Capitol Hill that approximately 20 percent of the population abuses alcohol and drugs, but he admits that the definition of "abuse" is a slippery one. Abuse can be a one-time thing or it can be a constant, he said.

Those rates were derived from the limited pre-employment drug screening that has been done.

Walsh cautioned that such screening only "indicates something was used at some time past, and no inference of impaired performance can be drawn from such test results."

Indeed, the test itself is a controversial one; many experts say it is inaccurate.

No U.S. auto maker even performs pre-employment drug screening.

"We just don't keep those kinds of statistics and don't know where they ginned up numbers like that," a General Motors spokesman said. "One in three is just not the way it is."

A Ford Motor Co. spokesman said his company keeps no figures on alleged drug abuse and suggested that a figure as high as $175 per vehicle is "way out of line."

"Our total health-care cost per vehicle is about $275," he said. "Even if we accept the abuse numbers being bandied around—which we don't—that would still only bring the cost to about $85, and we think that number is way out of line."

Service Index charts a good year for shops

Service and parts business at new-car dealerships in October was up over the same month a year ago, and business for the year is running well ahead of the 1984 pace.

According to the Automotive News Service Index, shop business at dealerships in October amounted to 106.5 percent of the volume recorded in the same month in 1984.

The rate of growth is down from that of the previous month. In September, shop volume was up 10.4 percent over last year.

For the first 10 months of 1985, service and parts volume showed a jump of 8.3 percent over the like period a year ago.

Most indicators in October showed strong gains over the previous year. Repair orders written, the biggest gainer, were up 12.9 percent over the 1984 month.

Total labor sales, customer-paid and warranty, were up 10.4 percent over a year ago. Gross profit on all labor and parts and accessories sales during the month registered a gain of 6.8 percent. Sales of all parts and accessories were ahead 1.9 percent, and October sales of shop parts—customer and warranty—were up 0.3 percent.

Through October, the top gainer for 1985 was total labor sales, which were 11.2 percent higher than in 1984. The number of repair orders written in the first 10 months was up 9.3 percent, and gross profit on all labor, parts and accessory sales in the January-Oc-

KIAZ to become first minitrucks in Soviet Union

MOSCOW—Work crews have started construction of an assembly plant near Kirovabad in Soviet Azerbaijan.

The plant, to be completed in 1990, will build KIAZ—the first Soviet minitrucks.

The basic KIAZ is a diesel van with a 1.5-ton capacity.

Designed mainly for urban and short-distance transportation of consumer goods and food products, KIAZ trucks reportedly get 20 MPG.

Other versions of the KIAZ truck will be modified into small service vehicles and minibuses for 14 to 18 passengers.

The only auto maker to back President Reagan

GM on 'right side' in tax reform

By Geoff Sundstrom
Washington Reporter

WASHINGTON.—While accolades are going to President Reagan for his rescue of House tax-reform legislation, the bill's passage is also cause for considerable congratulations within the ranks of General Motors.

GM took on most of industrial America—including Ford Motor Co. and Chrysler Corp.—by backing the President's tax-reform initiative.

GM Chairman Roger Smith came out early in favor of tax reform. Even when the House bill moved away from provisions deemed essential to GM's North American car production, the company still expressed optimism and said the legislative process should continue.

While most analysts agree that even the President's tax-reform proposal would almost certainly have immediate negative effects for some manufacturers, Smith stuck to his assertion that a simpler and fairer tax code will produce a far more efficient and dynamic economy.

It is better to base investment decisions on productivity rather than on tax avoidance, he said.

After the reform bill passed last week—by an unusual voice vote in the House—a GM spokesman said, "We are certainly encouraged by the House of Representatives' approval of tax reform . . . While the House bill is not perfect, it is an improvement over current tax law and further improvements should be made in the Senate."

Ford actively opposed the House tax-reform measure and Chrysler, while keeping quiet on its lobbying efforts, was nevertheless clearly understood to be against the Democrats' bill, according to congressional staffers.

The UAW and most other industrial unions supported the reform legislation.

Once the bill had cleared the House, Ford issued a statement saying, "Basically, we have been supportive of tax simplification and reform, but we continue to have serious problems with the legislation."

The company said, "The proposed elimination of the investment tax credit and reduction in depreciation, for example, will have an adverse effect on capital formation (and) the creation of new jobs in the industrial sector, and thus worsen our nation's already deteriorating position in the international trade arena. Although tax reform may not be the answer to our severe trade imbalance, it should not worsen that situation."

Elaborating on that statement, a Ford spokesman said the bill passed by the House would have "a negative long-term impact on investment."

He added that "looking backward, it is questionable whether we could have done Taurus and Sable" given conditions similar to those in the tax-reform measure.

As for GM's successful support of the bill, the Ford spokesman said that GM was also unhappy with much of the House bill but "had painted itself into a corner" by supporting the President's tax-reform initiative early on.

Senate leaders promised fast action on the tax-reform front when they return after the holidays. Senate Finance Committee Chairman Bob Packwood, Oregon Re-

VW Group leads European sales as year closes

LONDON.—It seems practically certain that the Volkswagen Group will emerge as Europe's leading auto retailer in 1985. Unofficial estimates for 11 months give it sales of 1.29 million for a market share of 12.9 percent.

The rest of the year-end finishing order looks like it will stay as it has been most of this year. At the end of November the estimate was: Fiat Auto, 12.3 percent (1.23 million); Ford, 11.8 percent (1.18 million); General Motors' Opel-Vauxhall and the Peugeot-Citroen group, 11.4 percent (around 1.13 million), and Renault, 10.6 percent (1.06 million).

The combined Japanese companies were at a record 10.9 percent, with sales of more than 1.08 million.

Demand in Western Europe was up around 4.1 percent to 9.99 million for 11 months, which means annual volume could be as much as 10.6 million. However, the returns are strictly provisional, and a clearer picture will not emerge until late January.

If the above results are confirmed, it will represent share increases for VW-Audi, GM and the Japanese. Peugeot will have maintained its 1984 share, but Ford, Fiat and Renault will have lost.

The latest forecast by DRI Europe predicts that VW will maintain European market leadership in 1986 as well. That will be due to a strong upturn in West Germany, where the company is the clear market leader.

Cadillac retailer seeks to buy 51 pct.

Rescue of Excalibur may come from dealer

By Richard Johnson
Detroit Reporter

Excalibur Automobile Corp. may be rescued by one of its dealers.

Excalibur is the financially strapped Milwaukee-area neoclassic maker that is seeking protection from creditors in bankruptcy court.

R.V. Robinson, a Cadillac dealer in Atlanta since 1974, is working on a deal to buy 51 percent of Excalibur, which is petitioning for reorganization under Chapter 11 of federal bankruptcy laws.

Robinson said last week he is "confident" that arrangements can be worked out with the current owners, but he declined to discuss details of the proposal. He said there has been no agreement on purchase price and other key terms of the acquisition.

"I'm trying to put together a package so we could do this," said Robinson, who was scheduled to continue negotiations with company officials at a meeting late last week.

According to William C. Stevens, Excalibur executive vice president and co-owner with his brother, David, company president, the deal would allow the Stevens brothers to retain the remainder of the company and continue to run the business.

Excalibur has maintained operations since petitioning for reorganization in late October. Court papers filed by the firm show liabilities of about $4.4 million and assets totaling approximately $6.5 million, including property, machines, equipment, supplies and inventory.

In seeking protection under Chapter 11, the company cited cash-flow problems. Company officials have blamed difficulties on

Effort to outlaw CAFE 'double-dip' dies in Senate

WASHINGTON.—When Congress adjourned, a Senate move died that would have stopped auto makers from corraling CAFE carryforward/carryback credits from a NHTSA-lowered standard.

The attempt by Senator Daniel J. Evans, Washington Republican, to disallow the "double-dip" would have hurt General Motors (with some $500 million liability for the 1984 and 1985 model years) and Ford Motor Co. (with some $55 million liability for 1985 models and as much as $20 million for 1986 models)—as well as the European luxury car makers.

Although the makers would have benefited from the 26 MPG CAFE requirement for 1986 models (lowered from 27.5 MPG), they would not have been able to generate credits they could carry backward or forward.

The amendment had been hung on to the Senate money bill for the Transportation Department, which opposed the idea.

The Evans amendment was supported by Chrysler, a company as surprised by the unexpected move as were GM and Ford. However, the Evans move died because of Congress' delay and procedures—not because of opposition from companies or even lawmakers.

Cunningham recovering from heart attack

DETROIT.—Alexander A. Cunningham, the General Motors executive vice president who directs the company's North American car and worldwide truck and bus operations, is recovering at home after suffering a mild heart attack.

Cunningham, 59, has headed North American Automotive Operations since January, 1984. Last August, GM's Truck and Bus Operations were added to his responsibilities.

AMC leaders look ahead

Jose Dedeurwaerder, right, American Motors president and chief executive, expects the company's "erratic" performance to continue in 1986, but he looks for brighter days in 1987 when new products arrive. At left is Joseph E. Cappy, executive vice president and newly appointed chief operating officer.

AMC studying import of price-leader auto

By Richard Johnson
Detroit Reporter

American Motors is "looking at" importing a small, price-leader car to the U.S., possibly from an Asian source, according to Peter Guptill, American Motors' new vice president—North American sales and marketing.

In an interview with Automotive News last week, Guptill said that while the U.S. small-car market is a highly competitive segment under attack from numerous low-cost sources around the world, it represents large volume and is an important link to entry-level customers.

Guptill also said the Alpine sports car from Renault probably won't be introduced until late summer 1987, several months after the high-performance specialty model had been expected to arrive. He deemed prospects for importing the Matra-built Renault minivan to be remote.

Guptill predicted that incentives will continue to play an important role in the subcompact market in 1986. He said there is a "high probability" of some followup to AMC's current cash rebate on Alliance/Encore, which is due to expire Jan. 10.

Calling AMC "the Marines of the industry," he said the company will tough it out in 1986, when the firm must persevere without additions to its passenger-car lineup.

Rumors of an AMC linkup with an Asian auto maker for the purpose of importing a low-cost small car have been rife in recent weeks. AMC dealers are said to be interested in a model to combat a bevy of low-cost minicars destined for the U.S. from such low-cost sources as Korea, Taiwan, Brazil and Yugoslavia.

Guptill said last week that he would also like something to go up against the minicar entries in the new market.

"That's a tough end of the market, but it's a volume end," he said. "You need those kinds of entry-level cars to establish a relationship with your customers.

"It's so difficult to make any money on those cars," he said. "But we're looking at some way to bring those vehicles in and do it at a profit."

Asked whether such cars would come from an Asian source, Guptill said "it doesn't take a rocket scientist" to understand that Asian countries, with their low-cost labor base, are potential sources for such vehicles.

Conceivably, a new AMC small-car entry could get lost in the shuffle of new Renault vehicles being primed for the U.S. market in 1987. They include a new intermediate to be built in Bramalea, Ont., the R-21 compact due from France and the low-volume Alpine.

Asked where a small car would fall in, Guptill said there is always a danger of "introducing too much, too soon."

"If another product were added

Penske buys Longo, top Toyota deal

By Matt DeLorenzo
Los Angeles Reporter

LOS ANGELES.—Toyota's top retail outlet, Longo Toyota in El Monte, has been acquired by Roger Penske. Terms of the purchase were not disclosed.

Penske, who heads three Cadillac dealerships in California in addition to his racing and truck-leasing interests, said he bought the Toyota operation because "this fits nicely into our retail automotive business."

Dominic Longo, the owner of the dealership, died Oct. 10. He formed the company in 1967 and built it into one of the largest single-point dealerships in the U.S. In 1984, Longo retailed 15,605 new vehicles.

Penske said the Longo name will be retained as will most of the management. "You don't want to ruin a good thing," Penske said.

This is Penske's first Japanese import dealership and his first import store in recent years. Penske held an interest in a Porsche-Audi outlet in Allentown, Pa., some years ago.

Not much is expected to change in the way the cars are sold at Longo, Penske said.

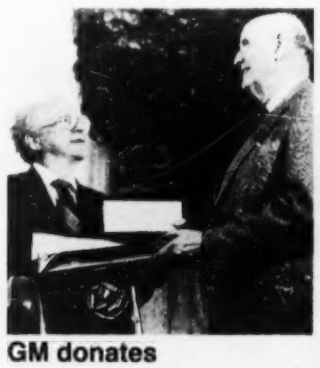
Dominic Longo prided himself in the open way he conducted his business. Instead of closing rooms and cars on the showroom floor, Longo's sales force operated from desks on the open showroom floor and sold cars at sticker with no additional dealer markup. Penske said his Downey Cadillac franchise is operated the same way.

"We're excited about it," Penske said of the acquisition. He added that he plans to expand parts and service and will offer innovative finance and leasing programs.

Penske said he sees doubling the size of the parts department and establishing what he calls a Toyota Automotive Parts Center at the dealership.

While not disclosing the price paid for the dealership, Penske said "we were very happy with the purchase price, it was very fair."

Asked about speculation that the store was on the market for $18 million, he said, "We don't disclose the financial arrangements, so any number you hear is wrong."



GM donates

General Motors Chairman Roger Smith, left, presents a check representing the first installment of GM's $1 million pledge to the Kennedy Center's National Performing Arts Fund to Roger Stevens, Kenedy Center chairman. The center is embarking on its first major fund-raising drive since the 1960s, when funds were raised for its construction.

Union charges unfair practices; company calls it phoney

UAW vote at Honda is delayed

By Mary Connelly
Detroit Reporter

A vote on UAW representation at Honda of America Mfg. Co. plants has been delayed "indefinitely" following union charges that the company engaged in unfair labor practices.

A vote by more than 2,500 Honda employes at three plants had been scheduled for Thursday, Dec. 19.

Honda has automobile and motorcycle assembly plants in Marysville, O., and a motorcycle engine plant in nearby Anna. The Marysville plant produces the Honda Accord and will begin producing the Civic in 1986.

Honda claimed the UAW "manufactured" the charges because it lacked the votes needed to win the election.

The UAW filed charges with the National Labor Relations Board in Cleveland, claiming that Honda had illegally questioned employes about union preferences, illegally increased benefits with an election pending and supported an "employer-dominated labor organization" opposed to the representation.

The rescheduling of the vote depends on the NLRB investigation. If the case is dismissed due to insufficient evidence, a vote could be scheduled within months, the company said. However, the delay may reach a year if evidence determines the need for a full hearing before an administrative law judge.

"I look forward to the day there can be an election at Honda in a truly neutral and legal atmosphere," said Joseph Tomasi, director of UAW Region 2B in Toledo.

Honda claimed that company actions in October, which are the basis of two of the charges, were not criticized by the UAW on Nov. 8 when it agreed to the December vote.

"Both of these charges concern events which took place before UAW international representative Hugh Smith and Honda signed a consent agreement setting the election for Dec. 19," said Shige Yoshida, Honda of America executive vice president. "We can only conclude that the UAW has taken this step because it knew it didn't have the votes to win."

The UAW charged that on Oct. 29, Honda attempted to "chill" UAW activity by "interogating" employes about the union.

The company said a poll was taken following receipt of the union's request for recognition to determine if employes wanted Honda to automatically accept the UAW as a bargaining agent or schedule an election.

The UAW also charged that on

Distributors cite threat of OE dealers

PROVIDENCE.—OE dealer competition is the biggest challenge facing heavy-duty distributors, according to a survey by the Allied Aftermarket Division of Allied Automotive.

Most distributors describe 1985 as a "stable" year.

Allied supplies Fram, Autolite and Bendix Brake products to the heavy-duty market. It queried 400 members of the Automotive Service Industry Assn.—Heavy-Duty Division and the Council of Fleet Specialists, regarding profits, customers, suppliers and product lines.

All of those surveyed held influential positions in their firms.

Some 10 percent called business poor; 11 percent called it superlative. About 22 percent considered the market stable/mature and 57 percent characterized it with "a steady stream of orders."

Distributors attributed the lack of growth to too many heavy-duty distributors, stiffer price competition, heavy-duty chains and multi-store locations and offshore suppliers.

However, they viewed OE parts dealers as their biggest threat, pointing to dealers' sales of parts at close margins, their brand awareness and marketing budgets.

More than 47 percent of the distributors said "obtaining better support from suppliers, such as discounts, terms, technical information and training" was their best bet for increasing profits.

Other potential profit boosters include broadening their customer base and using more-aggressive sales approaches.

Distributors generally sought "competitive pricing/frequent and simple programs" in a supplier.

Many chose quality products over price, while technical support and training were rated third most important.

Distributors felt customers looked first for good prices, though product quality and recognizable brand names were often considered more important than price.

Most distributors also felt they could still make a profit by controlling overhead, finding new markets, honing sales techniques and choosing the right suppliers.

Panoramic view

Cars & Concepts, Brighton, Mich., is offering the S/T-10 Chevrolet ship-through program, giving dealers a Skylite Electric Sunroof and Teak Woody Package. It has also teamed with Delco Electronics to offer an upgraded sound system that is available with the Skylite and/or Woody package.

November truck sales continue record string

By Joseph Bohn
Truck Editor

New-truck sales boomed in November, continuing the unbroken string of monthly records that began last January.

The light-duty segment shows no signs of a letup, though sales of mediums and heavies are definitely softening.

Overall, the industry retailed 358,494 trucks in November, topping last year's previous monthly record of 338,715 by 5.8 percent.

Light-duty sales set a November record with 338,727, up 7.1 percent from last year's previous high of 316,333, according to manufacturers' reports.

Most companies had solid increases, though Chrysler, GMC and Nissan were off for the month.

The Chrysler and Nissan declines were due largely to product shortages, and GMC's decline was due mainly to softer demand for its full-sized pickups.

Chrysler sales dropped to 37,097 from 43,372 a year earlier. Nissan dropped to 13,749 from 17,211 a year ago. GMC's 22,681 light duty sales were slightly below 22,892 last year.

GMC retailed 24,901 trucks in the month, off from 26,115 in like 1984.

The new Comanche boosted Jeep sales, propelling its total above 20,000 for the first time in any month.

Jeep retailed 22,834 trucks in November, up 53.6 percent from 14,870 a year ago.

Ford, aided by strengthening availability of Aerostar, recaptured the top spot from Chevrolet for the month, though Chevy still holds a commanding year-to-date lead.

New chairman for Mack has plant strategy

ALLENTOWN, Pa.—John B. Curcio, president and chief executive officer of Mack Trucks, has been elected chairman of the board.

He succeeded Alfred W. Pelletier who retired as chairman Dec. 11, after 35 years with the firm.

Curcio became president in 1980, and chief executive officer in 1983.

Mack will locate its new assembly plant outside Pennsylvania unless, prior to Jan. 17, it and the UAW can agree on cost reductions equal to those Mack could get outstate.

Curcio recommended one final try be made to keep the new plant in the Lehigh Valley area. Other issues such as environmental problems also must be resolved.

In other appointments at Mack, J. Anthony Donaldson, assistant general counsel since 1977, was elected vice president, general counsel and corporate secretary, succeeding Donald S. Bowie Jr., who retired after 30 years' service.

Walter C. Meck was named executive vice president and chief financial officer, replacing Guy D. Coffelt who is taking early retirement, effective Dec. 31.

Fred J. Kerber, executive vice president—manufacturing since 1979, was elected to the new position of senior executive vice president—resource management.

John J. Costa, general manager of the Hagerstown (Md.) powertrain operations since July, 1980, was elected vice president—manufacturing.

He assumes full responsibility for day-to-day operation of all Mack's manufacturing activities.

Century club qualifiers

Chevrolet recognized several dealers in its Charleston (W.Va.) zone for selling more than 100 trucks in one month. Dealers and officials at a special ceremony included, from left, Brent Galyean, Tag Galyean Chevrolet, Charleston, W.Va.; Ed Schoener, sales promotion manager, Charleston zone; Jim Love, C & O Motors, St. Albans, W.Va.; David Walsh, zone manager, and Matt Miller, Dutch Miller Chevrolet, Huntington, W.Va.

truck industry news

VW and PACCAR detail program for Class 6-7 venture

By Joseph Bohn
Truck Editor

PACCAR, Inc., Bellevue, Wash., and Volkswagen do Brasil officially announced the signing of a distribution agreement which will give PACCAR Class 6 and 7 trucks to sell in the North American market for the first time.

(Automotive News first reported the deal Nov. 4.)

William Gross, executive vice president of PACCAR, said a 29,500-pound GVW Class 7 truck will begin offered through Peterbilt and Kenworth dealers in October or November, 1986. A Class 6 truck will be offered about one year later.

And, in the third phase, a Class 7 tractor will be made available.

Gross said the cautious timetable was adopted to allow PACCAR to maintain its strong quality image.

Both Kenworth and Peterbilt dealers will receive identical models, and they'll be priced identically, Gross said.

The company is planning a separate franchise agreement for dealers interested in the new vehicles and doesn't know yet in what volumes it will import the vehicles.

That will depend on dealer interest, as well as the marketplace.

However, PACCAR's long-term goal is to get a 5 to 10 percent share of the North American market, Gross added.

The company doesn't have overall projections for Class 6 and 7 demand, but it expects demand to continue strong. Class 8, by contrast, is expected to decline, beginning this year, according to various industry forecasts.

PACCAR also expects to add more VW Brazilian-built models to its lineup in future years. It has an exclusive distribution agreement to sell Brazilian VW trucks in the U.S.

Its trucks will be priced in the premium ends of the market, Gross said. They will be sold on a value-for-the money basis, rather than a low-price, entry-level basis, he added.

The vehicles, although manufactured by Volkswagen do Brasil, will combine VW's truck technology with premium U.S.-designed powertrain components.

The trucks will be spec'ed out by PACCAR for the North American market. Thus they will not be a strict VW product in the way some imported medium duties are.

For example, the Class 7 truck being brought in first will feature a Cummins 6CT8 engine delivering 210 HP at 2,200 RPM; a Fuller 5106 6-speed transmission; a Rockwell/Braseixos RS20-145, 20,000-pound rear axle; Goodyear G124 or G186 11R22.5 14 ply tires and 7.5x22.5 steel-disk wheels; a single rectangular steel fuel tank with 40 or 80 gallon-capacity, and dark-gray frame, bumper and wheel arches. The body will be available in four colors.

Gross added that a 5-speed

Iveco names Wottring to top fleet position

Iveco Trucks has named **Paul Wottring** senior director of national fleet sales. Wottring, with Iveco since 1982, previouly worked for Fiat in the U.S. and for General Motors.

George Radenkovich was named senior director of parts for Iveco. He joined the firm from Fiat.

service management

Saab parts begin trip to U.S.

A shipment of replacement parts leaves the Saab Car Division's central parts warehouse in Sweden on the first leg of a journey by air to distribution points in the U.S. Saab says it will increase airfreight of parts to the U.S. in 1986 to 80 percent of total volume, compared with the current 53 percent.

AAA diagnostic center a hit in Massachusetts

ROCKLAND, Mass.—American Automobile Assn. Massachusetts reported that members and the public are "flocking" to its Auto Diagnostic Center, which opened earlier this year in Rockland, about 20 miles south of Boston.

More than 1,000 owners have had their vehicles checked at the center, the first AAA-owned facility in the nation to conduct diagnostic analyses, according to Stewart W. Hall, director of automotive services for AAA Massachusetts.

He said no repair work is done at the center. Customers have needed repairs made at a facility of their choice, he added, although they are advised of AAA's nationwide network of Approved Auto Repair dealerships and garages.

The decision to establish an Auto Diagnostic Center resulted from a "careful evaluation" of the automotive service industry, Hall explained.

"With the increasing prominence of self-service gas stations, the car owner has more responsibility than ever," he said. "We can now help meet that responsibility."

Also, Hall noted, the center often provides prospective used-car buyers with an opinion of the vehicle's condition, or it can detect previous repairs that were done improperly.

"Auto travelers also enjoy the peace of mind of a complete diag-

Goal is improved quality, profits in U.S. dealerships

Volvo, Saab boost shop support

By Jack Walsh
Service Editor

MALMO, Sweden.—Sweden's two industrial giants, Volvo and Saab-Scania, are taking steps to improve the quality and profitability of service in U.S. dealerships handling their automotive products.

Volvo is planning a pilot collision-repair shop at the Rockleigh (N.J.) headquarters of its U.S. subsidiary, Volvo of America Corp., hopefully within a year, according to Hans Gustavsson, service director, Volvo Car Corp. Sales & Marketing Division, in Gothenberg, Sweden.

Objectives of the pilot operation, he said, are to establish another profit center for Volvo dealers who now farm out collision work, and to develop a training program for dealership personnel in use of state-of-the-art equipment and repair techniques.

"Collision repair is a profitable business and our North American dealers should be getting their share," sadi Gustavsson. "Also, the quality of body work done on Volvo cars would be improved with dealer technicians using repair techniques and shop equipment evaluated by Volvo in the pilot program."

The Saab Car Division has no plans for such a program for its dealers in North America, most of whom also send damaged cars to outside collision shops, but it is stepping up air shipment of replacement parts to speed up dealers' service work and improve customer satisfaction.

Currently, about 53 percent of Saab parts shipped to the U.S. are moved by airfreight, according to Bo Bjorkman, the division's parts general manager. In 1986, he said, airfreight shipments will be increased to 80 percent.

Saab parts and accessories are shipped to worldwide distribution points from the division's 570,000-square-foot, fully automated high-storage central warehouse in Nykoping, about 100 miles south of Stockholm. About 33,000 different parts and accessories are warehoused in the facility.

"Our deliveries to the U.S. go to three import warehouses—in New York, Chicago and Los Angeles—which handle distribution to our dealers in the U.S. and Canada," Bjorkman said.

Order handling, he noted, reflects varying degrees of urgency: VOR, supplementary and stock orders. The importer or dealer determine the degree of urgency when the order is placed.

"VOR orders are shipped from Sweden the same day if the order is received before 2 p.m.," he ex-

Please turn to Page 24, Col. 1

Sweden's top insurer is big in service, too

VAXJO, Sweden.—The biggest insurer of motor vehicles in Sweden, the Folksam Group, also plays an important role in the research, development and evaluation of service equipment and repair techniques.

The company, which has approximately one million clients, established Folksam Auto AB, a subsidiary specializing in automotive service and collision repair, in 1964 at a time when repairs costs and insurance premiums were soaring.

Klas Back, president, Folksam Insurance Co., recalled that "many repair shops then reacted angrily. They refused to consider it reasonable that we wanted to have an insight into the trade, to the very existence of which we at that time contributed millions. They were even less inclined to realize that it was our duty as an insurance company owned by its policyholders to acquire this insight."

Today, however, the majority of Sweden's repair shops regard Folksam activities in a different light, Back noted.

"They know that it is not our intention to impoverish car-repair shops or reduce the income of their employes," he explained. "Many working methods and items of equipment that saw the light of day in Vaxjo are now standard in many repair shops. They make for more efficiency, higher quality, better job satisfaction and lower staff turnover."

While Folksam Auto has provided the parent company with a good return on its investment, Back emphasized that money isn't "of the most importance here. What is important is the knowledge of the car and the car-repair trade, of the importance of the working environment to shop personnel and of the reasons for accidents that hurt people and damage vehicles."

This knowledge, he added, eventually benefits policyholders in the form of improved insurance coverage and a higher degree of safety in their cars—and outside them—at the lowest possible cost.

Folksam Auto's current shop, opened in 1979, was "built around the workmen," according to Kurt Johansson, president. "They represented a fund of knowledge, experience and skill that was quite unique. They knew how to do the job, what was important for good results, where improvements were needed, and what was possible."

He noted that service shops—especially those for repairing damage—traditionally have been "tucked away out of sight in murky surroundings. We endeavored to reverse this state of affairs and put people first and foremost."

Johansson said Folksam Auto employs the newest equipment, tools and ideas to increase repair quality, and works with manufacturers in the development and evaluation of their products.

The shop is laid out in the shape of an E, with the "stem" containing all supply facilities: Departments for preparing the car—washing, inspection and evaluation, planning repairs and parts storage. In the "arms" are shops

Foreign markets vital to automotive firms

Swedes eye U.S. for sales gains

By Jack Walsh
Service Editor

MALMO, Sweden.—Sweden's population of only about eight million inhabitants forces many companies to pursue outside markets to assure survival.

The U.S. is a major market, second in many instances only to Europe, and a number of Swedish automotive parts and equipment manufacturers are looking to the U.S. to expand export business.

For example, AB Ph. Nederman & Co. exports 80 percent of its line of products designed to reduce health and safety hazards in the workplace, according to Nils-Axel Nyberg, marketing vice president.

He said Nederman entered the U.S. market about five years ago and that sales "have grown dramatically each year. And we see a great potential for expansion in the future in both the U.S. and Canada."

AB Samefa, which manufactures and distributes the Car-O-Liner bench system for unit-body collision repairs worldwide, exports about 88 percent of its production, according to Leif Chressman, marketing manager.

"Sales of Car-O-Liner equipment in the U.S. have grown substantially every year since the system was introduced there in 1979," he noted. "About 40 percent of the 1,400 units produced annually are shipped to the U.S. We are the leader in unit-body bench sales there, accounting for about 33 percent of the market."

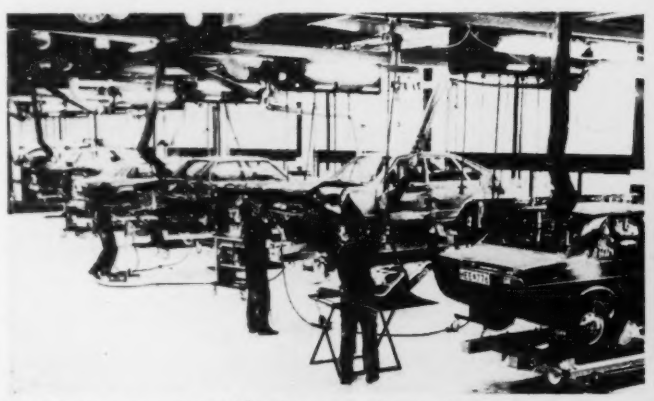
Drester AB, headquartered near Malmo, also exports about 80 percent of its collision-repair equipment, mainly to Europe, the Middle East, South Africa and Australia. Its products were introduced on the West Coast of the U.S. recently, and Sten Drennow, managing director, said Drester is planning to widen its distribution to other areas of the U.S. in the next year.

Nederman's Nyberg said his firm's products include all types of emissions-control equipment to provide "free, pure breathing zones" in auto-repair shops, overhead lines for hoses, cables and tools that result in safer and un-

Please turn to Page 23, Col. 2

Extracting fumes the uncluttered way

An overhead exhaust-extraction system by AB Ph Nederman & Co. of Sweden keeps hoses off the floor, preventing risk of accidents, and reduces wear and damage to them. An overhead system also is easily moved as shop requirements change, the company said.



Vehicles repaired in ultra-modern shop

Workmen in the ultra-modern shop operated by Folksam Auto AB in Sweden use state-of-the-art equipment and tools, as well as innovative repair methods, to fix damaged vehicles.

Goal is improved quality, profits in U.S. dealerships

Volvo, Saab boost shop support

Continued from Page 16

plained. "Otherwise they go the following morning. Supplementary orders move within 48 hours and stock orders within five working days."

Bjorkman said Saab is working continuously to achieve "perfect performance" in shipment scheduling and lead times.

In the future, he added, "the time required in the distribution links between manufacturer and dealer will be shortened by using fewer intermediate warehouses and speeding the flow of goods.

"Transfer loading and unloading time will be cut or eliminated, customs clearance will occur in connection with reception of a shipment, transport times will be reduced and more shipments will be made directly from the central warehouse to dealers."

Also, Bjorkman said, Saab will have fewer parts and accessories suppliers, but its relations will be closer in terms of controlling the scheduling, frequency and speed of shipments.

"The distribution systems of tomorrow will have to be better adapted to market requirements, and will demand more frequent shipments, improved scheduling and shorter lead times," he explained.

"All this will be possible through the information systems that are gradually being expanded, and that—within the next 10 years—will be worldwide in scope and an integral part of world trade."

Bjorkman said the development of airfreight and information systems will make it possible to move both parts and information from the central warehouse to dealers with "very short" lead times.

"This will reduce the amount of capital tied up in the business and will improve the service to customers," he added.

Both Volvo and Saab are placing increasing emphasis on service training at all levels to keep their customers happy.

Volvo's Gustavsson noted that today's more complicated vehicles "mean that the service technician will have to operate more like an engineer than a mechanic only."

Volvo operates 10 service-training centers in the U.S. and three in the U.S., he said, and has about 110 factory service representatives in the North American market.

Of the 1,900 service technicians in the approximately 405 U.S. dealerships and 85 in Canada, Gustavsson noted, 1,600 are certified in VISTA (Volvo International Service Training Assn.), an elite group open to the most qualified technicians in dealer shops.

Arne Hoglund, Saab service general manager, said good car-repair work requires more than repair manuals and tools. "Whoever does the work must also have the knowledge and motivation to do it right, right from the beginning," he added. "Such knowledge is obtained through education and hands-on training."

For several years, Hoglund said, the company has been conducting the Saab Master Technician program, whose goal is to "assure the technical know-how of our dealers, and increase the mechanics' sense of responsibility to the customer, the dealership and Saab.

This goal, he added, is achieved by increasing the mechanics' interest in training, giving the right mechanics the right training, strengthening their loyalties to the dealerships and Saab and providing recognition for the mechanics.

To offset some owner-dealer contact lost because of longer maintenance intervals, Hoglund said, Saab has established what it calls Long-Term Usage followup. Here's how it works:

After a buyer signs an order for a new car, he or she is asked whether they'd like to participate in the project. Those who do receive a contract which commits them to keep a journal describing their experiences with the car, and to report regularly to the factory.

The Saab owner also agrees that all maintenance and repairs are to be done at authorized Saab workshops, which submit to the factory reports on the work done on the LU cars.

"Results from the LU program, together with warranty statistics and other technical followups, provide the basis for the specification requirements we present to our technical development department," Hoglund said. "LU data also gives us a very good picture of what Saab car ownership actually costs the consumer."

As an incentive to get owners to participate, he said, Saab offers a 40 percent discount on labor costs and parts used in the repair and maintenance of the vehicles during the three-year followup period.

Award for Trader Bud

Bud (Trader Bud) Hatfield, right, Trader Bud's Westside Dodge, Columbus, O., receives an award as the No. 1 volume dealer in the zone for calendar 1984 from Dave Krumboltz, Chrysler Corp.'s Cinncinnati zone manager.

November truck deliveries continue string of records

Continued from Page 14

Ford retailed 103,576 light duties, up from 95,895 a year earlier.

Ford retailed a total of 108,127 trucks in the month, up from 100,-010 last year.

Chevrolet retailed 95,004 light duties, up from 84,047 last year.

Chevrolet retailed 96,712 trucks in the month, up from 85,903 last year.

For 11 months, the industry retailed 4,295,582 trucks, up 13.7 percent from 1984's 3,777,816.

Chevrolet's 1,174,225 year-to-date light-duty total was up 15.8 percent over a year ago.

Chevrolet's total sales of 1,193,-547 were up from 1,032,233 in like 1984.

The cushion is strong enough to give Chevrolet calendar-year, as well as model-year, truck sales leadership in 1985.

Ford retailed 1,118,004 light duties during the 11 months, up 7.8 percent from a year earlier.

Ford retailed a total of 1,174,067 trucks, up from 1,086,316 in like 1984.

Chrysler retailed 560,457 light duties, up 16.3 percent from last year's 11-month total.

GMC retailed 287,197 light duties, up 10.4 percent from a year earlier.

GMC retailed a total of 323,803 trucks, up from 300,016 last year.

Jeep retailed 160,746 trucks, up 15.1 percent.

The imports retailed 737,441 trucks, up 24.8 percent from a year earlier.

Medium and heavy sales of 19,-767 were off from 22,382 during November, according to preliminary MVMA reports.

For 11 months, mediums and heavies totaled 257,512, up slightly over 253,146 in like 1984.

Medium-duty sales of 3,807 in November were off from 5,542 last year.

Year-to-date, mediums totaled 48,772, off from 55,910 in like 1984.

Within the medium segment, there were no Class 4 sales reported this year, according to MVMA.

Class 5 sales of 175 were off 74.1 percent for November. Year-to-date, Class 5 sales of 5,018 were up 4.5 percent from last year.

Class 6 sales of 3,632 were off 25.4 percent in November. Year-to-date, their 43,754-unit total was off 14.4 percent from last year.

Heavy-duty sales of 15,960 in November were off from 16,840 last year. Year-to-date, their 208,-740-unit total was slightly ahead of 197,240 in like 1984.

Within the heavy segment, Class 7 sales of 7,068 were up 16.3 percent for the month. Year-to-date, Class 7 sales of 88,118 were up 22.3 percent from last year, MVMA reported.

Meanwhile, Class 8 sales of 8,-892 were off 17.4 percent for November. For 11 months, Class 8's total of 120,622 was off 3.7 percent from like 1984.

VW, PACCAR detail plans for Class 6-7 distribution

Continued from Page 14

transmission option, also provided by Fuller, may be made available during the first year.

Although the vehicles will offer normal kinds of accessories like air conditioning and radios, the option list will be limited since this will be a "functional truck," Gross said.

The trucks will bear the Peterbilt and Kenworth nameplates.

As PACCAR expands its model range in Class 6 and 7, different kinds of GVW units in different configurations will be added.

As previously reported, VW do Brasil has been very successful in its home market, going from 2.8 percent penetration in 1979 to 22.7 percent of Classes 3, 6, 7 and part of 8 in which it competes.

Donald Dancey, executive vice president of VW do Brasil, previously told Automotive News that his firm was building 60 trucks a day—about 14,400 on an annualized basis of 240 work days.

It has the capacity, with proper investment, to get up to a maximum of 130-140 trucks a day.

VW do Brasil had an order for 1,000 trucks for China, and officials there indicated a desire for more, Dancey added.

In the U.S., PACCAR has had an off year in 1985. Market penetration for Peterbilt in Classes 7-8 was off 0.76 percentage points for 10 months, according to R.L. Polk, and penetration by Kenworth was off 1.69 percent points.

Industry analysts attribute Kenworth's steep slide to a sharp slowdown in demand among smaller owners-operators where a high percentage of its sales have traditionally been concentrated.

That segment appears to have softened more than the fleet side of the business which is also off.

PACCAR is among the last of the domestic heavy-truck firms to forge a marketing agreement with an overseas firm.

Earlier this year, International Harvester reached an agreement to market Nissan trucks. GMC and Chevrolet market Isuzu trucks, and Ford is selling a Brazilian-built Cargo line.

Mack markets Renault trucks. Freightliner and Mercedes-Benz are owned by West Germany's Daimler-Benz.

Buick eyes '88 for 'distinction'

By Michelle Krebs
Financial Editor

FLINT.—Buick will appear more distinct from other General Motors car divisions beginning in the 1988 model year, its general manager said.

The "new" Buick will emphasize technology and performance in product as well as non-product areas, Donald Hackworth said in an interview with Automotive News.

The massive reorganization of GM, which began two years ago, found that Buick was part of the corporation's strength, Hackworth said.

"That's the good news," he said. "The bad news is that our products look alike, they feel alike and they drive alike. And we've got to have some distinction."

Hackworth said distinction is now being established in the design studios. The 1987½ two-seater —known as the GM33—and Buick's 1988 models will reflect Buick's first move toward product differentiation.

"It's probably going to be more difficult to design a four-division program that will sell 1.5 million units a year—like the A-car program," Hackworth said.

The GM divisions, he said, will have to look for distinction in styling, pricing, powertrains and the demographics they go after when they create a four-division car.

Each GM division will look for more niche markets. Hackworth said GM33 and its subsequent derivatives represent a major niche market for Buick. "It's an image halo product for Buick," he said. "It's a statement about tomorrow."

In addition, Buick is considering a large station wagon as an alternative to a minivan to compete in that market.

Hackworth said Buick will participate heavily in motorsports to show off its performance-technology image, one that is designed to lower the average age of the Buick buyer, who is now 50 years old.

"Our image centers around technology and the transfer of technology from motorsports to production vehicles," said Hackworth. "It centers around our powertrain and our V-6 engine."

Hackworth said Buick's concept car, the Wildcat (Automotive News, Oct. 28), is a good example of Buick's new image.

"It's a little bit different from other concept cars," Hackworth said. "We didn't focus on aerodynamics and we didn't focus on speed . . . any one of the features you may see in future cars.

Donald E. Hackworth

Joe Wilssens

"We did focus on the V-6 engine," Hackworth said. "In fact, we set it up on a pedestal and designed the concept car around it, which is kind of unusual."

He added, "You will see the silhouet of that car in future models. The car is a statement of where we're going."

In addition, Buick will focus on performance packages that depict "more go and less show" than in the past, said Hackworth.

Buick also has gone high-tech in customer service. That part of the business is moving closer to becoming just as important as the product strategy, Hackworth said.

Computer systems are being installed in dealerships to help with technical problems in the repair shop. Systems also allow a customer to do comparative shopping.

Hackworth said Buick is "on the leading edge" of domestic divisions when it comes to customer satisfaction.

Said Hackworth: "If Roger Smith says he's getting ready for the 21st Century, then we're getting ready for the 21st Century as well."

By exporting manufacturing process as well as the car

Buick may expand 2-seater plan

Continued from Page 1

and production systems. Another British firm, Lamb-Sceptre, Ltd., supplied manufacturing equipment, and the Japanese company, Ogihara, made the dies.

Hackworth said the production system is set up in London. The first prototype car produced there is now in the U.S. for testing.

The manufacturing operation will be taken apart piece by piece and moved to Lansing.

Hackworth said the manufacturing operation could be duplicated and set up anywhere in the world.

"There is no firm plan to do that," Hackworth said, "but we have certainly taken a cursory look at it. It's a car that the Europeans could identify with. I would suspect that there is an opportunity."

Buick is exploring export opportunities, Hackworth said.

"We have a group of people who have said if we're going to be a total business, a total company in tomorrow's world, we're going to have to compete on an international basis," he said. "To do that, you have to have products designed to have appeal on a worldwide basis."

He said Buick is evaluating its strengths and looking at what parts of the world would be suitable for its products. He suggested the two-seater and the Electra Park Avenue as possibilities for export.

"I do not think we're going to develop all of our products for markets all over the world," Hackworth said. "But when we design products, we have to design them with the engineering capability to be either left-hand drive or right-hand drive and consider those markets.

"What the general manager of Buick has to do is be more aware than in the past that when we're conceiving a car in our studios and we're thinking about our future, our image will be enhanced if we make products more viable in an international marketplace."

Hackworth said Buick chose a two-seater because its forecasts show that market segment will explode, even though the market will become more competitive in the next year or two.

Hackworth divides the two-seater market into sporty and luxury. The Pontiac Fiero is the low-price sporty while the Chevrolet Corvette is the high-price sporty.

Cadillac's Allante, to be introduced as a 1987 model, will be GM's ultra-luxury two-seater while Buick's two-seater will be GM's near-luxury two seater. Though GM is not talking about price yet, Buick's two-seater is expected to be priced between $20,000 and $30,000.

"Our observations are that there will be more growth in the luxury end of it than in the sporty end of it," Hackworth said.

He said Buick's two-seater is important for more reasons than sales and profitability.

"It's an image halo product for Buick," he said. "It's a statement about tomorrow. It's a product that allows us to make a statement about where Buick is going."

Hackworth noted that the two-seater will be one of the first all-new GM products since the auto company's massive reorganization.

In the meantime, Buick must decide on a name for the two-seater. A decision will be made in the first quarter of 1986, Hackworth said.

The choices have been narrowed to three: Wildcat, a former Buick model and the name for its newest concept car; Questor, the name of a Buick show car, and Reatta (pronounced ray-ATT-a), which Buick officials say is a manufactured word but also is a Spanish-American word for lariat.

Cadillac retailer seeks to buy 51 pct.

Rescue of Excalibur may come from dealer

Continued from Page 3

development costs and downtime associated with introduction of new models, expansion of the distribution system and heavy sales of other new cars during the incentive period late last summer. They said the incentives made dealers less inclined to solicit Excalibur business.

William Stevens said Robinson, who holds an Excalibur franchise, is one of 23 parties who expressed interest in acquiring either a majority or a share of the company and were subsequently sent investment packages. But he characterized the Atlanta Cadillac dealer as the most promising prospect.

"I would say so," said Stevens. "He has a lot of connections with General Motors because of who he is and his stature. He is probably the most viable (potential buyer). He brings the most to the party in terms of ability and knowledge and so forth."

Stevens said his goal is to conclude a deal before the end of the year. But even if an agreement is reached that soon, he said, the transaction would take 40 to 60 days to clear bankruptcy court.

"We'd have to go back to the creditors and work out a deal with them," he said. "But I have an idea on how to solve their problems."

Relations between Excalibur and creditors have been relatively cordial since the Chapter 11 petition was filed. Creditors last month did not block a $500,000 line of credit negotiated by the company with a local bank that enabled the company to continue manufacturing.

To finance the buyout, Robinson is pursuing a number of courses, including an application for a low-interest, $3.8-million loan from the Wisconsin Housing and Economic Development Authority.

The program is designed to make low-cost loans available for retaining or expanding employment in Wisconsin and is funded by issuance of tax-exempt industrial revenue bonds, according to Executive Director Edward Jackamonis.

The authority, which gave preliminary approval to Robinson's application on Dec. 13, could assist the project in one of two ways, Jackamonis said.

One procedure is to find a bank to underwrite the loan and buy the bonds from the authority. The loan is then assigned to the bank as payment for the bonds and the bank collects the loan and uses the proceeds to pay off the bonds.

The second procedure is to sell bonds on the public market to disinterested parties, he said.

One complicating factor, according to Jackamonis, is that program law limits such low-interest-loan deals to organizations with annual sales of less than $35 million. The authority was informed that the dealership had achieved sales of $32 million annually during the past two years and the addition of Excalibur assets could put Robinson over the technical limit.

Jackamonis said the state Department of Development will issue a ruling on the issue before the panel meets again in January.

Meanwhile, Robinson is investigating other means of acquiring funds to help close the deal, according to Stevens.

"R.V. told me he has three bases to get the financing and this is one of them," Stevens said. "He is also working on a federal program."

Robinson said the Wisconsin Housing and Economic Development Authority application "is not the best shot." But he declined to detail other avenues he is pursuing.

Excalibur produces the Series V Phaeton and Roadster models and is making plans to offer a two-door sedan, a four-door sedan and a limousine next year. The vehicles sell for approximately $60,000.

The company currently employs about 40 persons at its 95,000-square-foot facility in West Allis, Wis., and employs about 110 at the full production level of some 240 cars per year.

New Zaporozhets tested; production slated for 1987

MOSCOW.—The front-wheel-drive ZAZ-1102 car, which will go into serial production in 1987 as the base model for a new generation of Zaporozhets cars, is undergoing development tests, according to a Soviet report.

The new car, designed by the AvtoZAZ production association in Zaporozhye (Ukraine), has a top speed of 85 MPH, the report said.

The Soviets claim the pilot model uses 30 percent less fuel than the older model, getting about 50 MPG at 55 MPH. Fuel consumption is expected to be reduced further in the development process, the Soviet report said.

The new Zaporozhets has off-road capability, the Soviet report said.

Service Index charts good year

Continued from Page 2

tober period showed an 8.0-percent gain.

Shop parts sales, customer and warranty, increased 7.3 percent over the corresponding period of 1984. Sales of all parts and accessories during the first 10 months of the year were up 5.5 percent over 1984.

Figures used in the Service Index are averages compiled from reports on shop business from a cross-section of the nation's new-car dealerships.

SERVICE INDEX
106.5★

	Oct. '85 vs. Oct. '84	10 mos. '85 vs. 10 mos. '84
Gross Profit on All Labor and P&A Sales	+6.8%	+8.0%
Repair Orders Written	+12.9%	+9.3%
Total Labor Sales (Customer & Warranty)	+10.4%	+11.2%
Shop Parts Sales (Customer & Warranty)	+0.3%	+7.3%
Sales of All P&A	+1.9%	+5.5%

★—Survey by Automotive News shows that dealers' service and parts business in October, 1985, was 106.5 percent of business in October, 1984. Service business in the first ten months of 1985 was 108.3 percent of business in the corresponding period in 1984.

Despite output by two new companies

'85 model run declines slightly

By Kathy Boyer
Detroit Reporter

Although two new companies contributed 45,311 units to the 1985 model run, total production was down slightly from the previous model year.

Nissan Motor Mfg. Co., U.S.A., began production of the Sentra late last March at its plant in Smyrna, Tenn., and New United Motor Mfg., Inc., Fremont, Calif., started assembling the Chevrolet Nova in late December, 1984.

But auto production during the 1985 model run dipped 1.57 percent from 1984.

Car makers assembled 7,975,390 units in the 1985 model year, compared with 8,102,269 in 1984, which was the highest model-run production since 1979.

For the 1985 model year, all the domestic makers except Honda of America Mfg. Co. and Chrysler Corp. reported decreases.

A high demand for the Honda Accord brought total model run production to 155,102 cars, 32.34 percent more than the 117,200 completed in the 1984 model run.

Chrysler posted an increase of 11.83 percent during the model year—to 1,315,326 units, up from 1984's 1,176,144.

The company introduced two new models for 1985, the Chrysler LeBaron GTS and the Dodge Lancer.

General Motors' production of 4,490,883 cars during the 1985 model year was down 4.09 percent from 1984's 4,682,477.

Buick, Cadillac and Oldsmobile all reported increases, while Chevrolet and Pontiac Division showed decreases for the model year.

Production of GM's X-cars (Buick Skylark and Chevrolet Citation) was halted in 1985.

All Chevrolet models showed production decreases except the full-size Chevrolet.

Pontiac added the Grand Am and the 6000 to its lineup during the 1985 model year (the 6000 was built only in Canada in 1984). But the Pontiac Fiero, 1000 and Sunbird had a late start in the 1985 model year because the 1984 run was extended to improve GM's CAFE average. The extension also involved Chevette and all J-cars.

The Chevrolet Cavalier recorded the highest production of any 1985 nameplate (383,785), representing 4.80 percent of total U.S. output.

Ford Motor Co.'s production of 1,735,782 cars fell 4.29 percent from the 1984 model-run total of 1,813,523.

The company moved production of the Ford Crown Victoria and Mercury Grand Marquis from the U.S. to Canada in early 1985.

Ford's EXP model was temporarily discontinued in February, 1985. Production is scheduled to resume in early 1986.

American Motors' production of 150,189 units during the 1985 model year fell 28.01 percent from 1984's total of 208,624. The Kenosha plant was closed approximately 13 weeks during the model year for inventory adjustment.

Volkswagen of America reported production of 82,797 cars for the 1985 model run, down 20.62 percent from 1984's 104,301.

Honda doubles output plans for Canadian assembly plant

By Richard Johnson
Detroit Reporter

Honda Motor Co. has announced plans to double the output of its assembly plant now under construction near Alliston, Ont.

Meanwhile, an American Honda spokesman last week said the company's decision to build a second assembly plant in the U.S. will depend in part on the success of its new Acura line of imported upscale cars.

Honda had originally planned to be producing 40,000 units annually at Alliston by 1989. But in a speech in Toronto last week, Honda President Tadashi Kume said the company will now shoot for 80,000 cars a year by adding a second shift.

Since setting its earlier plans, Kume said the company has grown "more confident than ever in the strong demand for our products and the promising future market in Canada."

Japanese manufacturers are still observing import restraints limiting them to about 18 percent of the Canadian domestic market. Honda, which has sold 57,852 vehicles this year in the country, has surrendered the No. 1 importer position to Hyundai of South Korea.

Construction of the Alliston facility is scheduled to be completed next summer. Production is to begin late next year.

Initially, Honda will build the Accord model, with Civic models added afterwards.

Honda is increasing its investment in the plant from $100 million (Canadian) to $200 million. The factory will employ about 700 persons on two shifts when full production is reached.

A company spokesman last week said North American content at Alliston will be about 50 percent, including approximately 30 percent from Honda's Marysville, O., manufacturing operations.

Kume said Honda is "contemplating exporting some of our Canadian-made cars to the U.S. if market conditions permit."

Honda is also expanding its Marysville capacity by 180,000 cars per year by late 1986. The company now builds 150,000 Accords at the site.

Toyota recently announced it will build a $400 million (Canadian) assembly plant in Cambridge, Ont., that will produce 50,000 Corolla-class cars. Hyundai plans to construct a $300-million (Canadian) plant southeast of Montreal that will turn out 100,000 Pony Excel models a year.

VW postpones decision to buy into Spain's Seat

WOLFSBURG, West Germany.—Volkswagen has postponed its decision to buy into Spanish auto maker Seat. A decision is now expected following the next board meeting in February.

VW's negotiations with INI, which controls Seat, center on questions of future product policy, factory modernization and, particularly, the financial state of the Spanish company. But VW is hopeful that some sort of agreement will take place.

Spare for Seville

E&G Classics, Columbia, Md., adds its Classic Spare to the 1986 Cadillac Seville. This feature is also available for the Cadillac Eldorado.

Reagan picks Oliver for post of FTC chairman

WASHINGTON.—Conservative Republican David Oliver is President Reagan's nomination for chairman of the FTC, now short two commissioners.

Oliver, 46, has most recently been general counsel for the Agriculture Department. Before that, he was general counsel of the Education Department. Earlier, Oliver was in private law practice and was executive editor of the National Review.

Oliver will fill out the seven-year term (which began Sept. 26, 1981) of former Chairman James C. Miller III, now head of the White House Office of Management and Budget.

Political independent Kenneth Elzinger, an economics professor at the University of Virginia and an antitrust expert, is now thought to be out of the running for the other FTC nomination—if only because strong objections from Capitol Hill would follow if FTC had not a single Democrat.

Currently, the FTC's acting chairman is Terry Calvani, a Republican. Other commissioners are Patricia Bailey, a moderate Republican, and Mary Azcuenaga, an independent.

—Helen Kahn

Ford completes $493 million buy of finance firm

DEARBORN.—Ford Motor Co. has completed its purchase of an 81-percent interest in First Nationwide Financial Corp., the nation's ninth-largest savings and loan association. Ford purchased the firm from National Intergroup.

The $493 million purchase was announced in August. Completion of the transaction follows approval by the Federal Home Loan Bank board. Ford paid $32 per share for the savings and loan association.

First Nationwide will operate as an independent company. Anthony M. Frank will continue as chairman and chief executive officer. The firm is headquartered in San Francisco and has 180 branches in California, Florida, New York and Hawaii. It has $11.2 billion in assets.

Its businesses also include TranSouth Financial Corp., a consumer finance company with 144 branches in seven Southeast states, and First Nationwide Network, a franchising affiliate offering a variety of services to other savings institutions.

Riesenbach succeeds Reich in Subaru post

PENNSAUKEN, N.J.—Marvin S. Riesenbach has been named executive vice president—finance and administration of Subaru of America, Inc.

He succeeds Robert L. Reich, who died unexpectedly Nov. 11. Riesenbach will have overall responsibility for corporate finance, banking and investor relations. He formerly was executive vice president—administration and secretary.

No fresh line in 1986, Dedeurwaerder says

AMC chief predicts a rocky road ahead

By Richard Johnson
Detroit Reporter

American Motors' "erratic" performance will continue in 1986 as it struggles through another year without additions to its passenger-car line, according to AMC President and Chief Executive Officer Jose Dedeurwaerder.

At a press conference at the company's Southfield (Mich.) headquarters last week, Dedeurwaerder said AMC won't escape its current financial dilemma until it enters the intermediate and compact segments with new Renault products in 1987.

AMC lost nearly $120 million through the first nine months of 1985. AMC sales are off 36 percent for the year.

"We've said for a long time that we're going to have erratic performance up to the moment when we have something more to sell," said Dedeurwaerder.

In 1987, AMC will receive a North American version of the new R-21 that will be introduced in Europe next summer, as well as a new intermediate model to be built at the company's new facility in Bramalea, Ont. Also coming in 1987 is the relatively low-volume Alpine sports car from Renault.

"You know how things are going and the pressure it is putting on the small-passenger-car segment," said Dedeurwaerder. "It is always very, very difficult for us. But I believe we will be on the end of that kind of situation when we have our other cars. And all those programs are on time. The new cars are coming out in 1987."

Dedeurwaerder declined to predict the company's fourth-quarter results, although he said "the fourth quarter looks much better than the third."

During the press session last week, AMC's new chief operating officer, Joseph Cappy, said some of the decline in Alliance/Encore sales this year has resulted from a decision to withdraw in part from the fleet business.

"Relatively, we're kind of holding our place in the domestic competition," said Cappy. "It's just that now you've got so many more Japanese products streaming on the scene and, frankly, everybody is down.

"Our sales are down, but frankly one of the reasons is we haven't gone after fleet business," he added. "We consciously backed away from fleet business this year and that's worth as much as 20,000-30,000 units."

He said the decision to pull back on fleet sales was because "that business is not as profitable as the retail business is."

"We're not going to do that just to make volume," said Dedeurwaerder. "That is very clear."

He said AMC is also looking outside the U.S. for possible relocation of its Kenosha assembly operations. Several states have approached the company with financial packages should AMC decide to leave Wisconsin in 1989, when the Kenosha-built Alliance and Encore models are due to be phased out.

Asked about AMC's interest in relocating in Canada or Mexico, Dedeurwaerder said, "We have a good country to talk to, it's called France."

AMC's new board chairman, Pierre Semerena, a former Renault executive, told the press gathering that he will not have a day-to-day role in the management of the company.

Semerena, who will live in New York and maintain an office in Southfield, said he will be responsible for preparing and conducting board and shareholder meetings.

"The management of the company will be in the hands of Mr. Dedeurwaerder and Joe Cappy," he said. "I will be responsible for the permanent relations between the various members of the board. I will participate in the relations between American Motors and Renault when I can help. And I think I can help because I worked a long time with Renault."

But the new chairman said he does not have a specific mandate or assignment, such as coordination of Renault activities in North America or responsibility for AMC's import planning.

Semerena was elected chairman at the board's Dec. 13 meeting in New York, replacing Paul Tippett, who became president of Springs Industries in July and continues as an AMC director. Semerena has been a member of AMC's board while serving as executive vice president of Renault, which owns 46 percent of AMC stock.

Sources indicate that Dedeurwaerder will be returning to France some time in the first six months of 1986 to accept major responsibilities with Renault, but may retain direct responsibility for AMC.

However, he dismissed the reports last week as "speculation."

He also denied rumors that the company is nearing a joint car-making venture with an Asian auto maker, possibly Fuji Heavy Industries, parent company of Subaru of America.

"We never made any statement that we were talking with Fuji Heavy Industries or Toyota or with Mitsubishi, never," he said. "Those were speculations. Yes, we do have contacts with Japanese companies, even if they are not making cars, but are making componentry. We are interested in trying to find alternatives for componentry for our cars. There is no reason to be specific yet about any contacts."

Joe Wilsdans

New chairman

Pierre Semerena, new chairman of American Motors, said he will not have a day-to-day role in management. He will concentrate on board and shareholder meetings.

Import stockpile at highest total in nearly 3 years

Continued from Page 2

compares with 97,597 on Nov. 1 and 98,396 on Dec. 1, 1984. As noted, there was a 41-day supply of trucks on Dec. 1, compared with 39 a month earlier and 42 a year earlier.

Adding import cars and trucks, the vehicle stockpile this month was 407,217, up from last month's 373,603 and a year-ago's 330,548. Those figures translated into a 33-day supply this month, a 30-day supply a month earlier and a 32-day supply a year earlier.

These are the import cars by country of origin and their days' supplies:

Japan—Honda, 6; Toyota, 11; Subaru, 17; Mazda, 18; Nissan, 26; Mitsubishi, 32; Chrysler Corp. imports, 67; Chevrolet imports, 96 (including 64 for the Suzuki-built Sprint and 131 for the Isuzu-built Spectrum), and Isuzu, 101.

Germany—Mercedes-Benz, 24; Porsche, 52; Audi, 62; BMW, 68; VW, 71, and Merkur, 139.

Other countries—Yugo, 14; Jaguar, 16; Saab, 37; Volvo, 54; Alfa Romeo, 62; Peugeot, 90, and Renault, 221.

AMC 'looking at' import of a price-leader auto

Continued from Page 3

to that, we would have to look at where it would best fit in," he said.

Guptill said AMC "might" wait until 1988 to introduce such a vehicle, but added that "all considerations have to be weighed. We can't sit here and delay adding new products and expect Alliance and Encore to carry three or four different segments."

AMC has refused to acknowledge persistent rumors that it is talking with an Asian company about a deal that could lead to construction of a joint-venture plant in the U.S. or importing a small, price-leader car.

At a press conference last week, AMC President Jose Dedeurwaerder said "we have had contacts with people and our basic orientation is we are looking for components."

He denied that the company is nearing an agreement with Fuji Heavy Industries, parent company of Subaru of America, which has been pegged as a likely partner for AMC.

Guptill said dealers are very enthusiastic about the 1987 Renault entries. The models represent key elements of a five-year product-development plan designed to broaden AMC's market coverage beyond the shrinking subcompact segment.

Guptill said the U.S. version of the R-21, which debuts in Europe this summer, will arrive "in February (1987) for perhaps a March introduction." He said the Bramalea intermediate and the Alpine are due "more toward the end of summer."

He said the Canadian car "deserves to have its own launch." The Alpine had originally been projected for a late 1986 debut in the U.S., but its timetable has been pushed back to early 1987.

Guptill said the company will make its official announcement of its coming successor to the Jeep CJ during the first week of January. The YJ product, which will be built in the company's Brampton assembly plant, has been described by sources as a lower, wider, more stylish and much less stark version of the CJ. Guptill last week said he is not concerned that the YJ, with its added creature comforts, will turn off the traditional CJ buyer.

Guptill said Alliance/Encore sales will be slightly over 100,000 for 1985, and he projected sales next year in the 90,000 range. He said Jeep sales will establish an alltime record in 1985 and predicted that Jeep will surpass 150,000 units next year.

Guptill said the company has no specific plans for following up its current round of rebates on Alliance/Encore when they expire on Jan. 10.

"There are some ideas floating around the building," he said, adding that there is a "high probability" of followup incentives.

Guptill claimed dealer morale has remained strong in the midst of an Alliance/Encore sales slump.

"Dealers are ecstatic about Jeep sales," he said. "Their profitability is satisfactory as a result of that. They are working hard to get the domestic Renaults sold. But they understand the product drought we are going through, and we've been candid with them. We've asked for their patience and indulgence and we've received fantastic cooperation."

But the outlook for 1986 remains glum for AMC, what with continued erosion of the subcompact segment, increased Japanese imports and CAFE pressure forcing General Motors and Ford Motor Co. to push their own subcompact cars.

"We view ourselves as the Marines of the industry," he said. "We're going to put on our helmet and I guarantee you we're going to be here at the end of the year."

UAW vote at Honda plants faces an indefinite delay

Continued from Page 3

Oct. 28, Honda granted increased benefits, including extra holidays and increased time off at Christmas, "in order to discourage activities" by the union.

Honda said scheduling changes for 1986 were announced Oct. 28 in accordance with the company's handbook for its "associates." The 1986 changes include a continuous paid Christmas holiday from Dec. 24 through Jan. 2 and the addition of four paid days off during the week of July 4. In the past, employes were required to use vacation time or go without pay during the July shutdown.

The company and the union also dispute the role of the Associates Alliance which the UAW described as "employer dominated." The union maintains that the employe group, which opposes union representation, has distributed and sold election campaign material on company property during work time.

Honda denied the group is controlled by the company. It said the Associates Alliance and the UAW were permitted to campaign on company property but not on company time.

The UAW has been trying to organize Honda since 1981.

In petitioning for recognition, the UAW claimed that wage and fringe benefits at Honda lag behind those paid unionized auto workers at General Motors, Ford Motor Co. and Chrysler Corp. The union has also cited production speedups and working conditions.

Drive Aid car to visit auto shows

Bill Gerrard, Chevrolet's area marketing manager/East, stands next to the Drive-Aid Signature Car, a Chevrolet IROC Z-28 Camaro that was signed by more than 50 enterainers at July's Live Aid concert in Philadelphia. The car will be displayed at January auto shows in Baltimore, Philadelphia, Washington and New York. It will be the grand prize in an eight-city sweepstakes created by Chevrolet and MTV and will be awarded at the Drive Aid rock concert at Radio City Music Hall in New York Feb. 20. The project benefits the Live Aid Foundation, which helps raise funds to fight world hunger.

Waiting for orders from subsidiaries, Edsel Ford says

Taurus-Sable to test world market

By John A. Russell
New York Staff Writer

NEW YORK.—Ford's Taurus and Sable were designed for the world market, and the company is waiting for its overseas subsidiaries to start placing orders for specific models in the line, according to Edsel B. Ford II, general marketing manager for Lincoln-Mercury Division.

Ford made the company's concept of its newest models clear during a regional introduction of the two cars here.

He also said that the division was working on a new luxury car for Lincoln but would not reveal details.

Ford Motor Co.'s world market concept was stressed during an informal discussion with reporters on a wide range of subjects including the recent announcement by General Motors to offer more incentives.

Edsel Ford noted that Ford had announced a similar program, but added that he was disturbed by the public perception that "we always follow GM" and "every time GM sneezes we get pneumonia."

He agreed with several published analyses claiming that customers have come to expect incentives and will wait for those opportunities to buy cars—as indicated by the recent decline in sales for the domestic industry.

Ford Motor believes incentives constitute a disruption of the market, but with GM holding a 45 percent market share, other companies must go along or lose in the long run, Edsel Ford said.

He agreed that GM divisions often compete with each other rather than with other companies and added that here Ford and GM part ways.

According to the world-market approach, with the company having spent $3 billion on the development of Taurus and Sable, it wants to make the cars available to its subsidiaries.

The Ford executive did not reveal whether the cars would be built overseas or exported.

But he made it clear that the company was "waiting for the sisters (the overseas subsidiaries) to order." He said he believed the station wagon would probably be the car these companies choose.

Edsel Ford has some specific ideas which will have an impact on L-M. First and foremost, he wants to create separate identities for each marque.

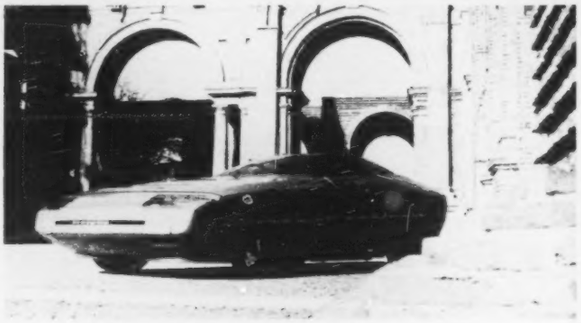
Mercury has a very low consumer awareness, he noted, and Merkur is struggling for identity.

Consequently, separate advertising programs will be launched for each marque to establish them in the marketplace.

He would not reveal the content of the advertising or the methods that will be used.

As for Merkur, he said everything connected with the introduction was wrong—from the availability of certain options to the advertising plan, which he termed too inconsistent to establish the nameplate.

Sounding a more encouraging note, he said that Lincoln has "Cadillac in its sights" and will do 60 percent of Cadillac's volume next year. And, he added, the Lincoln Town Car will be produced until at least the end of the decade.



Bertone's Ramarro wins award

Bertone, of Turin, Italy, has received the 1985 Car Design Award in the prototype category for its Ramarro, a Bertone-styled Chevrolet Corvette. The judges' panel was composed of representatives from 10 automotive magazines.

Ford-Budd settlement bared over use of too-thin steel

By Richard Johnson
Detroit Reporter

Ford Motor Co. acknowledged last week that it reached a financial settlement "a couple of years ago" with a supplier which provided Ford with sheet metal stampings of insufficient thickness.

A Ford spokesman said the company discovered in 1983 that "a small number" of stampings purchased from Budd Co., a major auto supplier based in Troy, Mich., were too thin. However, Budd denied that thinner steel was used intentionally.

The companies have declined to discuss the size of the settlement or speculate on the number of under-gauge stampings received or specific components and car models involved.

A Ford spokesman last week said measurements of stamped steel "led us to believe that we were receiving a small number of stampings made from under-gauge steel."

He said a review of Budd's shipping records confirmed the problem, which was brought to the supplier's attention. The resulting compensation agreement was reached without litigation, according to the Ford representative, who termed the size of the settlement "proprietary." Budd remains a major supplier of stampings to Ford, as well as to General Motors and Chrysler Corp.

The Ford spokesman said the company is not sure what parts and car lines may have received the too-thin stamped steel.

"It could have been a number of different parts, so we're not going to speculate," he said. The company has said the thinner metal would have "no significant effect" on crashworthiness or rust susceptibility.

The shortfall ranged from 0.001 of an inch to 0.004 of an inch.

"Thickness in sheet metal as received varies within any coil," said Paul Sicher, a Budd vice president. But he said thickness is only one factor contributing to the final quality of a stamping.

"Bending and stretching may cause, for example, significant thinning to occur during press operations to form any part," he said. "Conditions such as may be alleged in the sheet metal are consistent with normal forming variations and would not affect the appearance or function of automotive stampings."

The issue was made public last week in the course of a lawsuit filed by a former Budd employe against the company. The suit alleges that he was dismissed because he discussed the company's use of thin steel. The ex-employe charged that the supplier made a conscious effort to provide under-gauge steel.

GM ends up on 'right side' in tax-reform struggle

Continued from Page 2

publican, and Senate Majority Leader Robert Dole, Kansas Republican, expressed optimism that senators would craft a bill similar enough to the House version to produce a successful conference.

Packwood said his committee would begin hearings in January or February and perhaps begin writing a tax bill in March.

The tax plan approved by the House, while benefitting most individual taxpayers, would increase taxes on most large corporations. Many small businesses, on the other hand, would realize tax savings.

Manufacturing companies, which presently benefit from a range of tax breaks—particularly with regard to equipment expenditures—would be hit heavily by the bill's elimination of the investment tax credit and revised depreciation plan. Changes in tax treatment for foreign earnings would also impact multinational corporations.

Under the bill, the top corporate tax rate for large businesses would be 36 percent, down from the current top rate of 46 percent. The minimum business tax rate would be 25 percent.

The bill requires companies to write off the cost of equipment and real estate over longer periods, reducing the deductions they can take each year. The investment tax credit, which now pays for as much as 10 percent of the cost of new equipment, would be repealed.

Companies could deduct from income 10 percent of the cost of dividends they pay, but only after a phase-in period of one percentage point per year.

Employer-provided fringe benefits, such as premiums for health insurance, remain untaxed.

obituaries

Maurice L. Berger

BALTIMORE.—Maurice L. Berger, 89, retired owner of Berger Oldsmobile, died Dec. 11. He began his automotive career selling Stanley Steamer, Chalmers and Maxwell in Newport News, Va. Mr. Berger operated Berger Oldsmobile in Baltimore from 1933 until 1943. He then served as consultant to Stu Berger Oldsmobile and Berger Imports until 1982.

Philip Lustine

WASHINGTON.—Philip Lustine, 87, a pioneer auto dealer here, died Dec. 17. He had been in the auto sales business since opening a Chevrolet-Oldsmobile dealership here in 1923. That business grew into one of the area's largest dealership networks, including Nissan, Toyota, and Dodge franchises in addition to his Chevrolet and Oldsmobile outlets. His dealerships are now managed by his son, Burton.

Tinsley Azariah Galyean

CHARLESTON, W.Va.—Tinsley Azariah Galyean, 81, owner of Tag Galyean Chevrolet, Inc., here, died Dec. 12. Mr. Galyean had held Dodge, Chevrolet, Mercedes-Benz, Volvo and Toyota franchises. He served 12 years as an NADA director.

Service training centers built by Toyota in China

NAGOYA, Japan.—Toyota Motor Corp. has completed two service training centers in China to train its staff there to better handle customer services.

The centers are located at the top of Toyota's service stations in Beijing and Guangzhou. Toyota has 10 service stations in China, offering repair and other maintenace services for about 10,000 units.

In the Nick of time

After a robbery at Operation Santa Claus, Chrysler California presented toys to the Orange County Social Services Agency at the Albert Sitton Home in Orange. Chrysler California is a Chrysler Corp. regional marketing program. Operation Santa Claus is the agency's annual toy collection drive for children in foster homes. With Santa Claus and the children are, from left: Bonnie McInerny, Operation Santa Claus coordinator, and Chrysler California executives Ray Dreyfus and Mike Kane.

Governments tell price of enticing Toyota to build

LEXINGTON, Ky.—Kentucky will provide $125 million over the next two years to bring Toyota Motor Corp.'s $800-million assembly facility to the state.

The money, to be raised through industrial bonds, is to spent as follows: $10 million for land acquisition, $25 million for site preparation, $10 million for a training facility, $33 million for employe training and $47 million for highway construction. Kentucky is expected to pay $12 million to $13 million yearly to service the bonds.

Gov. Martha Layne Collins said the state expects to gain almost $500 million in taxes over 20 years as well as employment for 3,000 workers at the plant and many more in related industries.

The facility is to be on line by 1988 and produce 200,000 cars yearly at full capacity.

Meanwhile, the Ontario Government committed itself to $35 million in interest-free loans and another $15 million in training programs to entice Toyota to build in the province. (The figures are in Canadian dollars.) The company announced earlier this month it will build a $400 million car assembly facility in Cambridge, in the southern part of the province.

The loan is for 14 years, with payments on principal deferred until the eighth year. If Toyota meets production targets, the loan will be interest free. The training program will last five years.

The plant is expected to employ 1,000 persons building 50,000 cars annually at full production. It is to begin production in 1988.

Preliminary total is 8,182,084

Year's auto output best since '79

By Kathy Boyer
Detroit Reporter

Estimated production of 8,182,084 cars in 1985 was the highest since 1979 when 8,418,369 cars were assembled. Auto plants ended production for the year last Friday (Dec. 20).

The estimated 1985 build was 5.20 percent more than the 7,777,721 completed last year. (The preliminary total for 1984 was 7,801,140.)

Contributing 57,549 and 43,950 units, respectively, to this year's gain were the newcomers—New United Motor Mfg. Co. (NUMMI) and Nissan Motor Mfg. Co., U.S.A. NUMMI began to report significant production early this year, and Nissan began car production in April.

Showing production gains this year (estimated totals) over 1984 are: Volkswagen, 96,961, up 29.65 percent from 74,785; General Motors, 4,826,592, up 10.50 percent from 4,368,030; Honda of America Mfg. Co., 144,368, up 4.18 percent from 138,578, and Chrysler Corp., 1,268,282, up 1.28 percent from 1,252,216.

Preliminary figures indicate calendar-year production declines from 1984 for: American Motors, 111,257, down 42.11 percent from 192,196, and Ford Motor Co., 1,633,125, down 8.01 percent from 1,775,315.

With no Saturday overtime scheduled because of the holidays, last week's targeted output of 164,310 units fell 10.12 percent from the previous week's 182,811 and dipped 4.09 percent from the year-ago week's 171,313.

Last week's estimated production was shared as follows: GM, 57.01 percent; Ford, 19.70 percent; Chrysler, 15.79 percent; Honda, 2.04 percent; AMC, 1.67 percent; Volkswagen, 1.43 percent; Nissan, 1.20 percent, and NUMMI, 1.16 percent.

GM's Wentzville plant was closed last week (Dec. 16) for year-end changes. The plant produces the Buick Electra and Oldsmobile Ninety-Eight.

GM's Fiero plant in Pontiac will be closed until Jan. 20 to prepare for the new Fiero GT and also for inventory adjustment.

GM's Bowling Green plant will be down until Feb. 3 to prepare for production of the new Corvette convertible.

Auto production will resume Jan. 2, 1986.

Week to fight drunk driving opened by Reagan, Dole

WASHINGTON.—President Reagan and Transportation Secretary Elizabeth H. Dole opened observance of National Drunk and Drugged Driving Awareness Week last week.

James Adduci, former MVMA president and now chairman of the National Commission on Drunk Driving, presented a progress report to Dole.

The report noted that when the President signed the Uniform Minimum Drinking Age Act in July, 1984, only 23 states had such a law. Now, 37 states do.

The report said that while new laws and "creative participation" of concerned citizens and responsible corporations all help, innovative programs and changing social attitude—a goal of the National Commission—are needed to make drunk and drugged driving "socially unacceptable."

Last year, more than 44,000 Americans were killed in car crashes, and at least half of those crash deaths were alcohol-related. The report noted: "Programs to discourage drunk driving are yielding tangible results. Deaths caused by drunk drivers have dropped 24 percent between 1980 and 1984."

NHTSA contributes a fact sheet on drunk driving. It includes data on the high risk for and from male drivers, 24 or younger, for whom such crashes are the leading cause of death. They are 3.5 times as likely to be killed in alcohol-related crashes as members of other groups. About 8,000 such drivers were killed in 1984 and an additional 240,000 were injured.

NHTSA has produced a booklet called Idea Sampler, telling citizens how to conduct an educational program and encourage others to do so.

Dole paid tribute to Mothers Against Drunk Driving (MADD) for its efforts.

Ford's Climate Control in Korean joint venture

ANYANG, South Korea.—Mando Machinery Corp. announced that it will sign a joint-venture agreement with the Climate Control Division of Ford Motor Co. to produce aluminum radiators for marketing here and overseas. Each partner will invest $2 million.

Production will begin in early 1987 in a plant to be built in Pyongtaek, south of Seoul. Initial production is targeted at 450,000 units annually, to be increased to 800,000 units a year by 1990.

Truck production for 1985 was best since 1978

With plants ending production for the year last Friday (Dec. 20), estimated domestic truck output for 1985 was the best in seven years.

Truck makers pegged a build of 3,305,397 trucks this year, the best output since 1978 when 3,676,747 trucks were completed.

Preliminary figures indicate the year's production was 5.05 percent more than the 3,146,356 built in 1984.

With no Saturday overtime scheduled before the two-week holiday break, last week's slated truck output of 72,533 dipped 13.54 percent from the previous week's 83,892 but was 10.01 percent more than the year-ago week's 65,935.

Nissan Motor Mfg. Co. U.S.A.'s plant in Smyrna, Tenn., was down last week (Dec. 16) to make facility changes for a new truck model.

Production at truck assembly plants will resume Jan. 2.

Truck makers in Canada set output record

Canadian truck production in 1985 was the highest in history, according to manufacturers' estimates. The projection of 817,449 was 0.20 percent above last year's 815,783. Production for the year ended last Friday (Dec. 20).

Last week's estimate of 17,116 was down 10.24 percent from the previous week's 19,106 but was 7.37 percent more than the year-ago week's 15,941.

Canadian auto makers' estimated 1985 calendar-year total of 1,076,463 was the highest output since 1978 when 1,131,050 cars were completed.

The preliminary 1985 figure was 1.34 percent more than the 1,062,183 assembled in 1984.

*—Revised estimate.
**—All Acadians are built for sale in Canada.
Monthly estimates may contain error of one or two units due to rounding.

Last week's scheduled output of 21,932 dropped 17.96 percent from the previous week's 26,733 but 10.24 percent more than the year-ago week's 19,894.

General Motors' St. Therese plant was down last week (Dec. 16) for inventory adjustment.

Production at St. Therese is scheduled to resume Jan. 2. All other car and truck plants also will return that day.

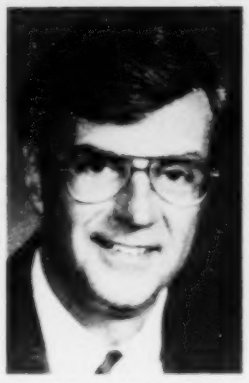
60th year—$45 per year, $1.00 per copy

Werner Breitschwerdt

The Mercedes-Benz chairman led a venerable company—1986 is its centennial—in keeping up with rapid technology changes in the industry.

John Z. DeLorean

A former GM executive acquitted on drug charges, but facing prosecution on his car companies' finances. He's planning another new car.



William Hoglund

As Saturn president, he won an innovative labor pact and led a much-ballyhooed site search involving hundreds of suitors—ending in Tennessee.

Lee Iacocca

Disclaiming interest in a presidential campaign, he continued rebuilding Chrysler, reorganizing it and diversifying in aviation and finance.

Sergio Pininfarina

Famed Italian designer joined Cadillac in unique 1986 Allante concept—involving bodies built in Turin and flown to Detroit for assembly.

Top Ten news-makers of 1985

Ronald Reagan

The President greatly influenced the world industry by not asking Japan to renew quotas on exports to the U.S., forcing tougher competition.

Roger B. Smith

Innovative GM chairman led diversification of industry with a "lulu"—the purchase of Hughes Aircraft—plus moves into finance and technology.

Tatsuro Toyoda

President of NUMMI brought stability to GM-Toyota joint-venture, improved worker attitudes on quality and successfully built large-volume Nova.

Bob White

Canadian UAW president made clean break from U.S. union, established independence and negotiated new contract with Chrysler.

Chung Se Yung

Hyundai president masterminded strategy that underpriced Japan, built a U.S. dealer network and prepared for the 1986 Excel entry.

Top story: Big 3 buying binge

By John K. Teahen Jr.
Senior Editor

The Big Three went on a buying spree in 1985, and their string of acquisitions captured first place in the Automotive News editorial staff's 33rd annual Story of the Year poll.

It was no penny-ante game. The auto firms shelled out hundreds of millions of dollars for each of their new toys. In the case of General Motors and Hughes Aircraft, the tab was $5 billion. And the purchases were all nonautomotive.

Second place went to GM's Saturn—the small-car project itself and the unrestrained hoopla that surrounded the selection of a plant site.

The No. 3 story was the increasing "Japanization" of the U.S. and Canadian auto industry with the announcement of several new plants and the expansion of some that are already operating.

Wide World Photos

GM's Smith and Hughes Aircraft's Puckett—a big day

Japan took fourth place as well. That story was the end of the U.S.-Japan Voluntary Restraint Agreement, the increase in the Japanese Government's export quota and Japan's threat to toss all restrictions out the window next March.

In fifth place was 1985's car-truck sales record of 15.6 million units. A few points behind was the brief, but welcome, domestic-car sales boom touched off by last summer's finance-rate incentives.

GM's $5 billion purchase of Hughes Aircraft led the Big Three "buy" list for 1985, but Chrysler Corp. and Ford Motor Co. also shelled out a bundle. Chrysler paid almost $1.2 billion for three companies, and Ford spent more than $800 million for two major properties.

And none of the acquisitions was in the automotive field. They were in the realm of technology, finance and—for Ford—farm implements. The auto giants are diversifying; they are building hedges against the cyclical nature of their own business.

GM built its empire by acquiring auto-related companies. It is extending its empire by reaching beyond that field. The 1984 purchase of Electronic Data Systems was a start. Hughes was another step.

In addition, General Motors Acceptance Corp. became a power in the mortgage business. Last March, it purchased the rights to service the $11 billion mortgage portfolio of Norwest Corp., Minneapolis. A week later, GMAC bought the Colonial Group of CoreStates Financial Corp. Colonial's mortgage portfolio is $7.4 billion.

No purchase price was mentioned, but one does not finance such ventures out of petty cash. On second thought, maybe GM *does* finance such ventures out of petty cash.

Chrysler also made large purchases in the field of high tech and high finance this year. Big-

GM, Ford try 7.9 loans to fight slump

By Michelle Krebs
Financial Editor

As predicted, the new year will be ushered in with financing incentives offered by all of the Big Three auto makers.

General Motors was first to announce last week that it would offer 7.9-percent financing on nearly half of its product line.

Ford Motor Co. matched GM's 7.9-percent financing, but on fewer models. Ford already had a 7.9-percent program in place on 1985 and 1986 Escort, Lynx and EXP models; that program will expire Jan. 2.

Both GM's and Ford's incentive plans began Dec. 26 and will run to Feb. 22.

Chrysler Corp. has had an 8.6-percent financing and rebate program in place on certain models since Thanksgiving. A Chrysler spokesman said the company expects to make no change in that program, which will run into the beginning of the year. No termination date has been set.

GM said it was offering the incentives to give the company a fast sales start in 1986. It further said it was emphasizing its 4-cylinder, mid-size models to improve the company's Corporate Average Fuel Economy (CAFE).

The announcement of GM's incentive program had been expected. GM was heading into 1986 with a million cars in inventory and an aggressive first-quarter production schedule. Analysts had predicted either a cutback in the production schedule or marketing incentives.

According to the latest Automotive News analysis, GM had an 86-day supply of cars on Dec. 1, well above the desired 60 days.

The domestic makers as a group opened December with a 78-day supply, the highest level in more than three years.

In addition, sales have been sluggish since the start of the 1986 model year on Oct. 1. In every 10-day period since then, domestic-

Taurus-Sable send GM back to drawing board

Ford Motor Co.'s Taurus and Sable models look like they will be a successful challenge to existing imported and domestic models and also to General Motors' biggest new-car program ever—GM10, which is still two years away from introduction.

GM insiders say that although GM can't make major changes now, it will tinker with its GM10 cars to enhance the styling in the wake of the introduction of the Ford Taurus and Mercury Sable.

The GM10 program is an $8 billion revamp of GM's mid-size car line involving up to seven North American assembly plants. The cars will be sold under the nameplates of four of GM's divi-

With a steady share for Chrysler

Slower sales in 1986 predicted by Iacocca

By Mary Connelly
Detroit Reporter

Chrysler Corp. Chairman Lee A. Iacocca predicted U.S. sales of cars and trucks will drop to 14.9 million units in 1986 from this year's expected record of 15.6 million.

Iacocca said he anticipates sales of 10.5 million cars and 4.4 million trucks in 1986.

Chrysler's 1986 estimate is in line with those of economists at General Motors and Ford Motor Co., who predict 1986 sales of 15.0 million and 14.8 million, respectively.

Chrysler anticipates its U.S. sales will exceed 2 million vehicles in 1986, Iacocca said.

The company will retain its 12-percent market share in this country in 1986, he said, although he also predicted that imports and their U.S. assembly operations will gain 40 percent of the market next year.

Chrysler increased its U.S. market share to 12.2 percent in 1985 from 11.6 percent in 1984, he said.

This year Chrysler expects to post sales of 2,092,300 cars and trucks in the U.S. and Canada, 271,200 more than in 1984. The gain is primarily due to increased production of the Plymouth Voyager and Dodge Caravan minivans and of the Chrysler LeBaron GTS and Dodge Lancer, Iacocca said.

In 1986, Chrysler will have the biggest new-model launch in its history, Iacocca said. It will introduce the P-car small compacts, Dodge Shadow and Plymouth Sundance; the Dodge Dakota midsized pickup, and the sporty coupe codenamed J-car.

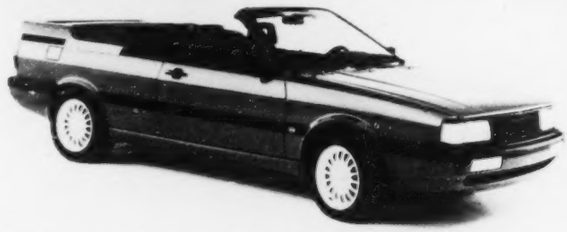
"These new vehicles are aimed at market segments in which Chrysler currently does not compete, so they should enable us to keep our plants running at full capacity in 1986," Iacocca said.

Describing Chrysler as a "combat-ready corporation" that has exceeded every goal of its five-year recovery plan following its brush with bankruptcy, Iacocca said the company will invest $3.4 billion in new products in 1986, more than it has ever spent in any one year.

He warned that in 1986 the auto industry could be at the crossroads with regard to foreign sourcing.

"If in 1986 there is no further resolution of the tax and currency advantages enjoyed by the imports, the auto industry will become increasingly dominated by foreign sourcing," Iacocca said. "In this regard, 1986 could be a watershed year for the auto industry."

Chrysler's Dodge division was ranked fourth and the Plymouth division sixth in U.S. vehicle sales in 1985, Iacocca said. Those are up from 1980 when Dodge was eighth and Chrysler ninth, he said.



Audi concept car tests convertible waters

Audi of America, Inc., is unveiling a new concept car during the 1986 auto show season. Called the Audi GT Cabrio, it is a convertible based on Audi's Coupe GT model. It was created by ASC, Inc., Southgate, Mich., and is designed to test the potential acceptance of an Audi cabriolet. The GT Cabrio is powered by a 2.22-liter, 110-HP, 5-cylinder fuel-injected engine.

Finishing strong, expecting gains in '86

VWoA is counting its blessings

TROY, Mich.—In a year-end statement, Volkswagen of America President Noel Phillips said that unit sales of VW and Audi vehicles are more than 20 percent higher than in 1984 and that the company expects to be profitable for the third consecutive year.

Further sales gains and increased profitability are anticipated for VWoA in 1986, despite the expected softening of sales in the U.S. car market from 10.7-11 million vehicles to 10.25-10.5 million, Phillips said.

"The two franchises together will sell close to 300,000 units in 1985, a significant increase over the 243,000 units which we sold in 1984," he said. "During 1986, we expect this number to rise to approximately 325,000 units, which would give us a solid 3 percent share of the anticipated American market."

Accounting for his favorable projections, he said, are "very strong performances by . . . VW and Audi during this year, and the introduction of the very latest automotive technology into both car lines for 1986."

The 25 percent jump in Volkswagen sales this year over last is due to the new Golf and to the Jetta, which is the best-selling European car in America, said Phillips. "Audi, at the same time, is finishing 1985 with another record year," he said.

"We are the leading importer of European cars in the U.S. by a wide margin, and we shall remain so during the year ahead," Phillips said.

For 1986, the Audi 5000 series has the Quattro's all-wheel-drive along with ABS braking and double-sided zinc-coating on all sheet metal. It is the first mass-production car in the industry with those features, VWoA said.

In addition, for 1986 the Volkswagen Vanagon Syncro and Quantum Syncro wagons will have all-wheel-drive for the first time.

Phillips said that 1986 will mark the first full year that both the Audi and Volkswagen franchises will be operating independently, which will significantly affect their growth in the U.S.

Looking farther ahead, he said that the introduction of an entry-level car in 1987 would further strengthen VWoA's position.

Toyota sets goal: 10 pct. of world market by 1990s

TOKYO.—Toyota Motor Corp. plans to seize 10 percent of the world's auto market by the 1990s, according to the Japan Economic Journal.

Within the company, the concept is called "Global 10," the newspaper said.

It added that the plan was put into full operation with the announcement by Toyota that it planned to build assembly plants in the U.S. and Canada.

The paper said that because local production could engender top-heavy supplies, higher production costs and counter-moves by North American makers, Toyota is "certain to face rough waters ahead."

Despite optimistic talk at the U.S. plant dedication, some Toyota executives called plans for the new plant a "very important move which could sway our corporate fortune," the newspaper said.

It pointed out that in Japan, Toyota has the advantage of a kanban system, good manufacturing location, amicable industrial relations and cooperative parts suppliers.

It is doubtful if all of those factors will exist in North America, "where Toyota has definitely to face harsher competition than in Japan and will have to make further cost cuts and maintain better quality control," the newspaper said.

It quoted an unnamed Toyota executive as saying, "We just cannot bring our family-like auto parts makers to America to make cars."

The newspaper said that all of the Japanese makers, before they made their moves in North America, knew that production would be costlier than exporting there. But because of growing U.S.-Japan trade friction, they decided they could compete with American makers on price and that the U.S. market still had room to grow.

But those factors have changed, the paper said. Cost competitiveness is bound to deteriorate, it said, because of high wages and depreciation costs. Furthermore, it said, U.S. makers have been adopting the highly efficient Japanese production systems and have started buying good-quality parts from Japanese suppliers.

Jeep prices up $205 to $247 on three lines

SOUTHFIELD, Mich.—American Motors will boost the prices of its 1986 Jeep line an average of $157, or 1.2 percent, as of Jan. 2.

The increases will be added to the prices of early 1986 models, which were substantially above end-of-1985 prices.

According to AMC, Jeep Cherokee prices will be increased an average of $213, Wagoneer models an average of $247 and Comanche pickup trucks an average of $205.

The price of the base Cherokee, a two-door, two-wheel-drive version, will rise 3.6 percent from $9,599 to $9,945. The base Wagoneer price will climb 1.7 percent from $13,784 to $14,024. At the end of the 1985 model year, base prices were $9,195 for the Cherokee and $13,427 for the Wagoneer.

Base price for a 1986 Comanche pickup was $6,999 before the $205 increase.

Early in December, AMC announced a price increase of $225 for its soon-to-be discontinued Jeep CJ-7. Sales of the Jeep line through November were 15.1 percent above year-earlier figures.

$100,000 Chrysler gift helps Detroit's needy

DETROIT—Eleven Detroit-area community organizations have received grants ranging from $5,000 to $20,000 from Chrysler Corp. to provide those in need with food and shelter.

Chrysler made a donation of $100,000 to the Mayor's Emergency Relief Fund in Detroit.

Automotive News names Peabody to editorial post

Edward J. Peabody has joined Automotive News as assistant industry editor.

He moves to Automotive News from another Crain Communications, Inc., publication, AutoWeek. He had been managing editor there since May, 1985, after having served as assistant managing editor for more than a year.

Edward J. Peabody

Peabody is a 1983 graduate of Wayne State University in Detroit, with a bachelor's degree in journalism and in Honors English. He currently is a master's candidate at Michigan State University.

Peabody's primary assignment will be to work with Industry Editor Al Fleming on editorial planning and production of Automotive News special issues and special sections.

"We are pleased to announce the addition of Ed Peabody to our staff," said Automotive News Editor Andrew R. McGill. "We are certain that his experience and skills will contribute to the publication's tradition of editorial excellence."

$500 million modernization for Chrysler truck plant

WARREN, Mich.—Chrysler Corp. has announced a $500 million modernization project at its Dodge City truck assembly plant, which will begin producing the new mid-size Dodge Dakota pickup in mid-April.

Production of current full-size Dodge pickups will resume at the plant in mid-March, following the expansion and renovation.

About 3,100 hourly employes were laid off and production was suspended Dec. 20 due to the changeover. The remaining 600 hourly and 500 salaried employes remain on the job.

The Dodge City modernization will strengthen Chrysler's position in the expanding pickup truck market, said Harold G. Jones, plant manager.

"When we reach full production on two shifts, total units in the system will more than triple, and our maximum annual capacity will increase to 257,000 units, a gain of 33,000," he said.

New, high-efficiency assembly systems and expansions will increase capacity, Jones said.

"In three short months, Dodge City will become an integrated high-tech truck manufacturing operation that will be world class in all aspects," he said.

The number of robots in the plant will climb from two to 154, the company said.

"The body shop will have 104 robots, primarily in welding, and our paint operations will have 44, including Chrysler's first robotic body sealing operation," Jones said.

In addition, 744 computers ranging from micros to mainframes will operate and monitor equipment throughout the plant.

The expansion will add more than a million square feet of floor space, bringing the total plant area to 2.7 million square feet.

The largest expansion involved the acquisition of 44.4 acres of land for construction of a "state-of-the-art" paint facility, the company said. The new paint operation will have five miles of conveyor lines.

Total conveyor length throughout the plant will double, extending to more than 11 miles, according to the company.

A 13-week training program for more than 300 skilled trades people has begun.

Import-car sales in Japan placed at 50,000 for year

TOKYO.—Sales of imported cars in Japan are estimated at 50,000 for 1985 and are expected to reach 55,000 in 1986, according to the Japan Automobile Importers Assn.

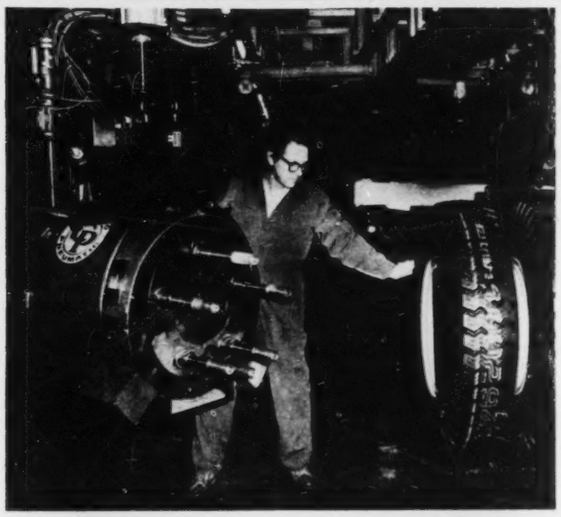
Those would be the two highest totals since the record of 60,161 in 1979.

In the U.S., imported-car sales are estimated at 2.8 million for 1985.

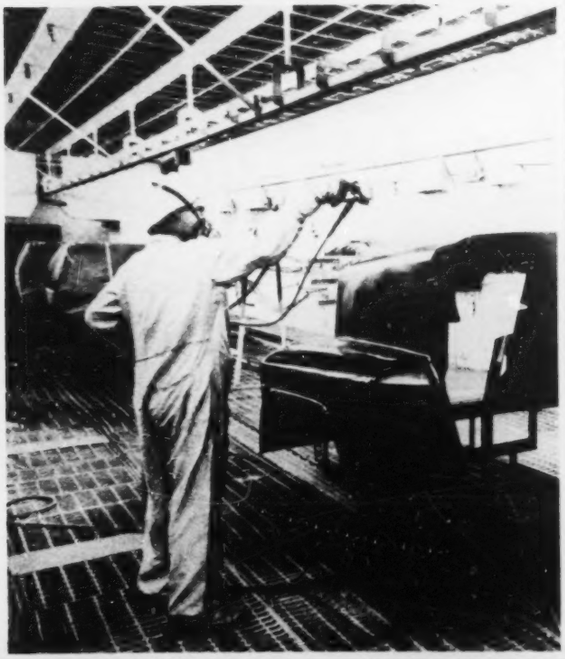
According to JAIA, brisk sales of European cars helped push the total to 45,267 through November, a 21.3 percent increase over the same period in 1984. In the Dec. 1-19 period, sales totaled 2,294, which was 2,439 units short of the 50,000 goal.

JAIA said the upward trend in sales was due primarily to sales of West German cars, which recorded a gain of 36 percent in the January-November period.

However, the association noted that sales of American-produced cars slumped to 1,673 during the period, one-tenth of the record of 6,739 set in 1979.



Employe involvement has improved assembly procedures at Ford's Kentucky truck plant. Multi-lug drive tools, top, suggested by employes, speed assembly and eliminate wheel wobble. Spray booth improvements boost quality, save money and have earned some employes a bonus, above. Hand-picked technicians at the Kentucky Truck Equipment Center, below, modify trucks to the customer's specifications. This phase of the operation has grown to encompass 20 percent of all trucks built at the plant.



October and 10 months are highest ever

More registration peaks

By Joseph Bohn
Truck Editor

October truck registrations set a record for the month, and 10-month registrations reached an alltime high.

Heavy-duty truck registrations declined in October, however, as an increase in Class 7 vehicles failed to offset the dip in Class 8.

For the 10-month period, heavy-duty registrations clung to an 11.3 percent lead over last.

During October, the industry registered 403,788 trucks, up from 349,807 a year earlier, according to R.L. Polk & Co.

Light-duty registrations of 379,238 were up from 325,274 a year ago.

Within the light-duty segment, Class 1 truck registrations of 261,747 were up from 187,465; Class 2 registrations of 114,534 were off from 135,545, and Class 3 registrations of 2,957 were up from 2,264 a year ago.

October's medium-duty count of 6,200 was up slightly from 5,857 a year ago.

Within the medium segment, Class 4 registrations of 86 were up from 72; Class 5's tally of 400 was off from 691, and Class 6's total of 5,714 was up from 5,094 a year earlier.

Heavy-duty registrations totaled 18,350, slightly below 18,676 a year earlier.

Within the heavy segment, Class 7 tallies of 7,181 were up from 6,185 a year earlier, while Class 8 registrations of 11,169 were off from 12,491 last year.

For the 10-month period, the industry registered 3,887,589 trucks, up 16.2 percent from 3,344,769 in like 1984.

Light-duty registrations of 3,654,754 were up from 3,136,652 in the 1984 period.

Within the light-truck segment, Class 1 registrations of 2,509,883 were up from 1,802,551; Class 2 registrations of 1,113,755 were off from 1,303,203, and Class 3 registrations of 31,116 were up from 30,898.

Medium-duty truck registrations of 54,317 were up from 47,693 a year earlier.

Within the medium segment, Class 4 registrations of 760 were up from 596 last year; Class 5 registrations of 5,454 were up from 3,290, and Class 6 tallies of 48,103 were up from 43,807 a year earlier.

Heavy-duty registrations of 178,518 were up from 160,424 for the first 10 months of last year.

Within the heavy segment, Class 7 registrations of 64,844 were up from 54,986 last year, while Class 8 registrations of 113,674 were up from 105,438.

International continued to build its lead over Ford as the top heavy-truck marketer in October, while Mack strengthened its grip on third place over GMC.

Ford, though, had a dramatic 10-month increase of 1.8 percentage points in market share in the heavy segment, while IH was still 1.1 percentage points off its market penetration of a year ago.

Behind Ford, Mack showed the largest (0.8 percentage-point) gain in share, followed by White with a 0.6-percentage-point gain.

Biggest loser in the heavy-duty sweepstakes for 10 months was Kenworth, whose market share was off 1.7 percentage points from last year.

Program embraces electronics, polymers, ceramics

GM studies big-truck technology

CHICAGO.—General Motors is studying new ceramics and polymers, alternative fuel engines, simplified controls and new developments in electronics for possible use on its large trucks, according to GM President F. James McDonald.

McDonald outlined GM's future directions during an address at the SAE Truck and Bus Show here.

He said GM is aiming at better fuel economy, versatility, reliability, durability, faster and easier maintenance and better counsel at the time of purchase.

Electronics for medium and heavy truck engines and transmissions are already a reality, McDonald pointed out, citing automatic transmission and engine controls now in use.

"Only a few short years ago, people were talking about applying electronics on engines and transmissions for mediums and heavies," he said. "Today, the talk has been replaced by action, specifically with automatic transmissions and engine controls now on the road."

McDonald called electronic controls "one of the most significant product improvements in the history of big power."

He ticked off a series of electronics-based advances for the industry, including automated communication between engine and transmission for more efficient power selection and fuel economy; exchange of information between drivers and terminal management via on-board computers and a permanent switch to integrated electronic controls.

"Internal tests and data from the road have already shown that the Detroit Diesel electronic engine control system delivers fuel economy improvements of 5-8 percent and up to 10 percent in some fleet tests," McDonald told the meeting.

He added that replacing mechanical controls with electronics will make it more feasible to comply with upcoming emission regulations without substantial mileage losses.

Electronics, he said, also provide pinpoint control of engine timing and fuel flow, thereby improving cold starts.

McDonald also cited coming advances in ceramics, but added, "I don't see an early introduction of major ceramic engine parts.

"Instead, first uses will probably include ceramic coatings, as well as cam followers, valve guides and piston domes," he said. "But wider usage will certainly follow."

McDonald added that "exotic materials", such as strong, lightweight plastics will continue to replace other materials in cabs. And he sees carbon fibers and similar compounds on the horizon for high-stress components.

Fiat will cross old borders with new Croma

By Jean-Jacques Renaux

We must regard the whole of Europe as our domestic market, and get out of the Italian borders." With those words, Ernest Ferrari, Fiat Auto's sales manager for Europe, underscored plans for an export bid of tremendous importance to the Italian auto maker's future.

Important, because although Fiat does compete closely with Volkswagen-Audi Group and Ford for the European sales lead, Fiat doesn't really run in the same race. Unlike Ford and VAG, Fiat relies almost solely on its home market. According to the company's own figures for the first nine months of 1985, Fiat and Lancia held about 53 percent of the Italian market, but accounted for less than 5 percent of sales in the rest of Europe. And exports during that period accounted for only about 30 percent of production.

Another problem: Fiat's product line leans strongly toward the low end of the market. In fact, about 75 percent of all Fiats and Lancias sold were the tiny Uno, Panda, Autobianchi A112 and Lancia Y10 models. The subcompact Fiat Ritmo/Regata and Lancia Delta/Prisma accounted for most of the balance, with the larger models taking only 2 percent of sales.

Now that's all changing.

Now there's the Fiat Croma.

The Croma is a slightly downsized version of the luxury midsize Lancia Thema, and Fiat Auto is banking on it to win the hearts and wallets of Europe. But not right away. Croma will have to begin its conquest in Italy, next summer, before wooing the rest of the continent. And, unless Fiat forms a joint venture company with a U.S. auto maker real soon, don't expect to see any Cromas scooting around your own neighborhood.

The Croma, launched in Italy just this month, shares more than a few parts with its sister ship, the Thema. Not only is it built in the same robotized Mirafiori plant as the Thema, but it also has the same floorpan (with a 104.7-inch wheelbase), and has such Thema features as front-wheel-drive, four-wheel independent suspension and four-wheel disc brakes (with anti-lock optional).

Croma customers will be able to choose any of six newly developed four-cylinder gas or diesel engines of 1.6 to 2.5 liters displacement — or the stealthy turbocharged version that reportedly is good for 155 horsepower and 130 mph.

One DOHC 2.0-liter version features a new electronic fuel-injection system developed jointly by Magneti Marelli and Weber, two subsidiaries of the Fiat group. The system, called IAW, has a microprocessor to control port injection and ignition at the same time. Another version of the Croma is called CHT (controlled high turbulence). Its 2.0-liter DOHC engine is fitted with a variable induction system developed in collaboration with Yamaha of Japan. Fiat says CHT improves the engine's torque at low revs and reduces fuel consumption by at least 20 percent.

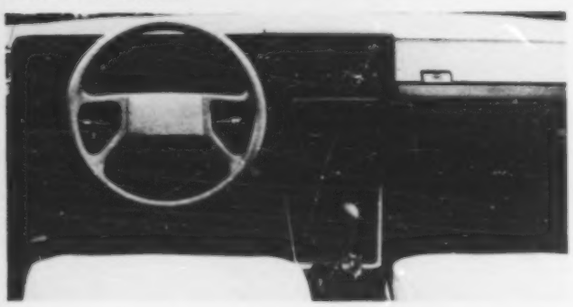
All Cromas will use a five-speed manual transmission, with a three-speed optional in one version. Power steering, tilt wheel, central door locking and power front windows are standard on most versions, and the option list includes: auto-levelling rear suspension, air conditioning, electrically heated front seats and mirrors and six-way power adjusting seats.

Price was not available as of press time, but Ferrari says, "We are not going to try to buy the market with this car. We are looking for profitability first. Yet the productivity gains we made in recent years should allow for competitive pricing of the Croma."

With such luxurious features and a competitive price, Croma is expected by Fiat to bridge the gap between the upper-medium class of compact sedans and the executive class, thus covering a market segment that Fiat estimates at more than a million cars per year. That's about 11 percent of total European sales.

"We know it will be a difficult task to recapture some market share in that segment," says Ferrari, "but with the quality of the product range we now have in our hands, it's up to us to win the place that we deserve on the European market. If we don't succeed, we'll have no excuses." ■

Fiat Croma CHT (above and below): The engine (controlled high turbulence) was developed with help from Yamaha. The CHT is one of six Croma versions.



Here's what's up at Fiat for '86

The Croma isn't the only thing keeping Fiat Auto busy.

In January the company will introduce a restyled Panda, powered by a 34-hp, 760-cc version of the FIRE four-cylinder. Toward the end of the year a 1.1-liter FIRE engine will be added, to complement the present 1.0-liter.

The Ferrari V-8-powered Lancia Thema — thought to be the most expensive Lancia ever — could be unveiled at the Geneva auto show in March. The 150-mph luxury sedan likely won't have four-wheel-drive, at least initially. However, the little Y10 will have 4wd by early summer, as will the revised Prisma and Delta models.

Turbodiesel versions of the Fiat Uno (70 hp, in excess of 100 mph) and Strada (80 hp) will be unveiled. The Strada will get a facelift — to freshen it up until the arrival of the all-new Type 2 at the end of 1987. ■

Fiat Croma Turbo i.e. (above and below): With 155 horsepower and a top speed of 130 mph, Fiat prepares to leap into the high-performance executive-car fray.

VW's Golf tops '85 European production list

Six models stand well ahead of the rest of the pack in 1985 Western European automobile production.

Preliminary reports indicate Volkswagen Golf was No. 1 in production during calendar 1985, followed in order by Opel Kadett/Vauxhall Astra, Fiat Uno, Peugeot 205, Renault 5 and Ford Escort.

Golf is being produced at a daily rate of 2,000 at VW's main Wolfsburg factory in West Germany. Another 700 daily at the Brussels plant and 150 Cabriolet and Caddy models boost the total to 2,850. If Jetta, the sedan derivative, is included, daily output jumps to 3,750.

Opel Kadett and Fiat Uno are next with daily rates between 2,500 and 2,600. Appeal of the Uno, particularly in Italy, has sent output running ahead of the level planned when the car was introduced nearly three years ago.

Kadett is selling strongly in all markets except West Germany, where buyers prefer the conservative design of Golf to the aero-look Kadett. Kadett production rates include the recently introduced sedan version and those assembled under the Vauxhall label.

At 2,350 a day, Peugeot 205 volume is more than double that of any previous model made by the French firm.

Renault's new series R5 is back among the big shooters, although at 2,200 daily it has yet to reach levels of the old R5 in its heyday.

Ford Escort rates run from 2,000 and 2,200 daily. The level has been higher; but considering the model's age, it is respectable. Arrival of the face-lifted Escort next spring is likely to intensify interest in the model, resulting in higher production schedules.

A common theme among all popular models is that they fall into one of two categories: superminis like Uno, 205 and R5; or lower-medium hatchbacks like Golf, Kadett and Escort.

The second tier of volume leaders is well behind the pacesetters. Included are Ford Fiesta (1,550 daily), Ford Sierra (1,500), Opel Ascona/Vauxhall Cavalier (1,400) and Renault 11 (1,300).

As compiled by Automotive Industry Data, the following were Western Europe's top-selling nameplates in the first half of calendar 1985 (unit sales and market shares are shown):

(1) VW Golf/Jetta (368,848 units/6.6 percent market share); (2) Fiat Uno (285,279/5.1); (3) Ford Escort/Orion (279,743/5.0); (4) GM Kadett/Astra (264,521/4.7); (5) Peugeot 205 (228,308/4.1); (6) Renault 9/11 (225,577/4.0); (7) Renault 5 (220,391/3.9); (8) Ford Fiesta (177,600/3.2); (9) GM Ascona/Cavalier (164,469/2.9); (10) Fiat Ritmo/Regata (164,-015/2.9). ■

Guptill adds marketing to sales duties at AMC

By Richard Johnson
Detroit Reporter

After realigning its top officers on Dec. 13, American Motors followed up last week by promoting Peter Guptill to vice president—North American sales and marketing.

Guptill had been North American sales vice president.

In an interview with Automotive News last week, Guptill, 43, said he will be responsible for "the entire marketing effort," including advertising, merchandising and parts and services.

Those functions had previously reported directly to Executive Vice President Joseph Cappy, who 10 days ago was elevated to chief operating officer.

Along with Guptill's promotion, AMC announced two additional sales and marketing appointments last week. Martin R. Levine was named general manager—marketing and Samuel L. Tucker was appointed general manager—U.S. sales.

Guptill had been vice president—North American sales since June, 1985, when Cappy was promoted to executive vice president for operations. Guptill, who had been vice president, U.S. sales, took on Canadian sales at that time.

Guptill joined AMC in 1971 after three years with Ford Motor Co. He served as manager of AMC's Dallas, Los Angeles and Chicago zones and moved the AMC headquarters in 1979 as director of Renault integration.

In 1980, Guptill was appointed director of sales operations. He became Western regional manager in 1981, general manager—U.S. sales in 1983 and vice president—U.S. sales in 1984.

Levine, who has been director of sales operations since March, 1984, joined AMC in 1971 and has held several sales, leasing and advertising posts at the zone and corporate levels. He was named Denver zone manager in 1982.

Tucker has served as manager of AMC's Northeast region since June, 1985. Before that, he was New York zone manager. He also spent three years in the company's international operations.

With Corvette and Fiero experience, GM is the leader

More plastic body panels due

Continued from Page 14

ment for DiversiTech General, Akron, said an SMC hood may use two molds (for an inner and outer panel), compared with 12 stamping presses for steel.

A disadvantage with SMC is that is may take three minutes to mold the hood, compared with 15 to 20 seconds to stamp it. On a run of 400,000 units, that is a considerable difference.

Reinker said, "A run of 400,000 cars with SMC hoods could use four different styles of hoods."

He also noted that the cycle time to mold SMC is decreasing. The estimate is it will take one third the time to mold a component by 1990.

Another advantage of SMC is the minimal waste material involved in molding a part.

On large body panels involving cutouts, such as van liftgates, it is often more practical to use SMC. Although waste SMC can't be recycled, there is usually little waste.

"The average Ford Bronco II owner doesn't realize that the liftgate is made of SMC," Reinker said.

Thermoplastics, which are injected into a mold under high heat and pressure, are not as stiff as SMC, but they can be molded about twice as fast as SMC.

Thermoplastics are better suited to vertical panels; the rear quarter panel of the Fiero is an example.

Sources indicate that Buick's 1987 front-wheel-drive LeSabre, the mid-1987 GM33 luxury two-seater and the 1988 or 1989 front-drive Electra will use injection molded thermoplastic fenders.

The likely material is produced by General Electric Plastics Group, Pittsfield, Mass., and is called Noryl GTX.

A GE spokesman claimed that Noryl GTX can withstand temperatures up to 300 degrees Fahrenheit and can be painted on an assembly line along with metal parts.

Applying an equal amount of paint to different materials on an assembly line has been a problem. Fiero body panels, which use several different types of plastic, are painted together off-line and then hung on the frame.

Purcell, of Budd, said, "There are a lot of assembly plants with systems set up to handle steel body panels in place. When you directly substitute a plastic panel, for example an SMC hood, and run it through an electrocoat paint dip where the paint is drawn to the metal, you might not get as much paint on the hood because the plastic is not a conductor."

The bumpers on the Ford Taurus/Sable line and the Aerostar are made of a GE thermoplastic called Xenoy. Plastic was chosen, according to the GE spokesman, because it can be molded in a shape not possible with metal.

Experts in the industry agree that there is no single plastic superior to all others in all instances.

RRIM, a material which chemically reacts and hardens in the mold, is another widely used plastic. It has the advantage of lower mold pressures and heat, but it requires further preparation out of the mold.

Composites may also gain a place in the industry. Molded Fiberglass Co., Ashtabula, O., for example, is experimenting with a plastic/balsa wood composite which looks promising.

Fields is hall of famer

PHOENIX.—Lucky Fields of Ray Tanner Volvo has become the 25th member of the Volvo Hall of Fame.

Modern forms broad-based technical unit

WARREN, Mich.—Modern Engineering Service Co. has formed a new division with the resources to take an automotive program from concept to production. The resources of the new division, which has the interim name of Modern 2000, will be in addition to those of Modern's present engineering and prototype departments.

Modern said the division will have closely linked departments for creative design, product and manufacturing engineering and prototype services including computer-integrated manufacturing.

Modern is also building a design center in Troy, Mich., which will fall under the command of the new division. The design center will be a high-tech facility for conceptual design and modeling in clay and other forms.

Modern also announced that its Product Engineering and On-Site Divisions will be restructured by eliminating, where possible, the line which currently distinguishes product off-site from on-site work.

The new organization is also more closely aligned to General Motors' new platform and product development groups. Modern said the changes will allow it to better serve its customers.

Incentives meant to halt 15% decline

By Jenny L. King
Detroit Reporter

Did the domestic auto industry really need a new, high-powered round of sales incentives?

A look at the sales figures since the beginning of the 1986 model year provides the answer, and the answer is: Most decidedly, yes.

Sales have trailed year-ago figures in each of the eight 10-day sales periods that have been reported since the 1986 model year began Oct. 1. The overall loss for those eight periods was 14.87 percent. The totals: 1,422,411 for the 1986 models and 1,670,934 for the 1985s.

Clearly, strong measures were needed, and General Motors and Ford Motor Co. adopted such measures with their current 7.9-percent financing programs.

The new programs went into effect in the final days of December, and no sales reports have been received as yet. But if 7.9 works as well as 7.7 and 7.5 percent did last summer, there's still plenty of time to save the 1986 model year.

The 1984 domestic sales recovery from the slide that began in 1979 and lasted well into 1983 was euphoric. In all of 1984's 36 reporting periods, only seven came up short of the previous year's total.

No one really expected 1985 to parallel the 17-percent climb accomplished in 1984. The Jan. 1-10 results of plus 28 percent were followed by a modest decline. A pattern of back and forth, between plus and minus, quickly was established as 1985 got under way, with sales keeping ever so slightly ahead of the 1984 numbers.

But June's total was off 7 percent and July missed by 11 percent. A car haulers' strike cut off deliveries and customer enthusiasm. Early August sales were down.

Then history of another sort was made. In mid-August, GM announced an unprecedented 7.7 an-

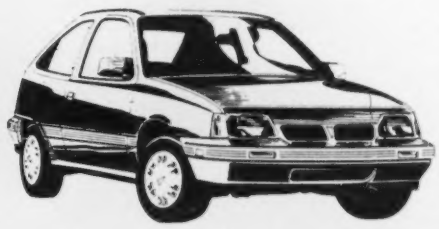
The Pontiac LeMans

The old . . .

LeMans—a star for 20 years

. . . and the new



New LeMans—for Pontiac from Daewoo

LeMans returns to Pontiac

By Mary Connelly
Detroit Reporter

LOS ANGELES.—The LeMans name will return to Pontiac as a 1988 model manufactured by General Motors' Korean partner, Daewoo Motor Company, Ltd.

The car, which will be designed and engineered in Germany by Opel, will be a derivative of the Opel Kadett. A three-door hatchback and a four-door sedan will be offered by Pontiac.

Pontiac has not said when the U.S. version will go into production nor has it estimated how many units will be imported. However, it is expected that 70,000 to 100,000 units annually will be produced for the U.S.

Pontiac General Manager J. Michael Losh announced the return of the LeMans name at the Greater Los Angeles Auto Show Friday (Jan. 3).

LeMans is an old and a popular label at Pontiac. The division first used it on a Tempest-type show car it displayed at the 1961 International Auto Show in New York. It was a sporty, supercharged model with wire wheels.

There was a LeMans option for the Tempest coupe and convertible in the 1962 model year, and LeMans became a separate Tempest series in 1963. The Tempest line was renamed LeMans for the 1971 model year and Pontiac's intermediate line continued to carry the LeMans tag through the 1981 season.

Pontiac still builds a rear-wheel-drive intermediate, but the LeMans name has given way to Bonneville.

Pontiac also introduced three new midyear models at the Los Angeles show: The newly styled Fiero GT fastback and the 6000 SE in sporty sedan and station wagon versions (story and pictures on Page 16).

Losh said the addition of the new models would boost Pontiac sales to 900,000 units in 1986. That volume would set an alltime Pontiac sales record, surpassing the 871,000 cars sold in 1978, he said.

Pontiac finished the 1985 model year with 785,617 new-car sales, the best year for the division since 1979.

Losh also announced the February introduction of an aerodynamically styled Grand Prix 2+2 with high-performance powertrain and suspension.

Subaru eyes VW plant for U.S. output

By Michelle Krebs
and Francis J. Gawronski
Automotive News Staff

Fuji Heavy Industries, Ltd., the Japanese manufacturer of Subaru cars, may begin building cars in the U.S. in 1989, possibly using Volkswagen's U.S. facilities.

Fuji has talked with VW as well as Nissan Motor Corp., which owns 7 percent of Fuji and produces cars and trucks in Smyrna, Tenn.

Fuji also has made efforts to talk to American Motors, but AMC has shown no interest, a Subaru of America spokesman said.

Talks with VW, Nissan and other makers have focused on cooperatively producing cars in the U.S. or at least using the companies' existing production facilities.

Fuji reportedly is negotiating with VW to use the West German auto maker's paint and assembly lines in Westmoreland, Pa., where VW produces the Golf, according to Nikkan Shimbun, an industrial publication in Tokyo.

Fuji will build its subcompact Leone model in the U.S., according to the publication. The Leone is similar in engine displacement and body to VW's Golf.

Fuji also is said to be looking at building new production lines at the VW plant.

A Subaru of America spokesman said the company, which is the U.S. subsidiary of Fuji, has not been notified that any deal is close to being completed.

A Volkswagen of America spokesman said the company was aware of the reports but knew nothing about such plans.

A second possibility is for Fuji to use automobile parts plants of one of the Big Three auto makers to launch production with initial output of between 30,000 and 40,000 units annually.

A final decision on plans for building cars in the U.S. is expected to come in the first half of this year, the Japanese publica-

Chief leaving Ford Aerospace unit

By Richard Johnson
Detroit Reporter

The president and chief operating officer of Starnet Corp., a subsidiary of Ford Aerospace and Communications Corp., is "departing" from his post.

Responding to inquiries by Automotive News last week, a Ford Aerospace spokeswoman said Starnet President Dennis R. Ciapura "is departing as president of Starnet" but will have "a continuing relationship with Ford Aerospace."

The spokeswoman would not elaborate on a reason for Ciapura's departure and would not confirm or deny a rumor of some managerial difficulties within the Ford Aerospace subsidiary.

The San Diego-based firm provides long-distance telephone service and data transmissions for businesses.

The controversy erupted last week as Ford officials studied whether to hand over internal Ford Motor Co. and Ford Aerospace audit documents subpenaed last month by the U.S. Government.

However, a Defense Department official said last week that the department is not looking for anything specific.

Meanwhile, unconfirmed reports circulated last week that Ford Aerospace is nearing a major reorganization that could involve a merger of operations with an-

Trivia experts: It's quiz time

Do you know the last passenger car to offer solid rubber tires?

Or the Michelin tire man's real name?

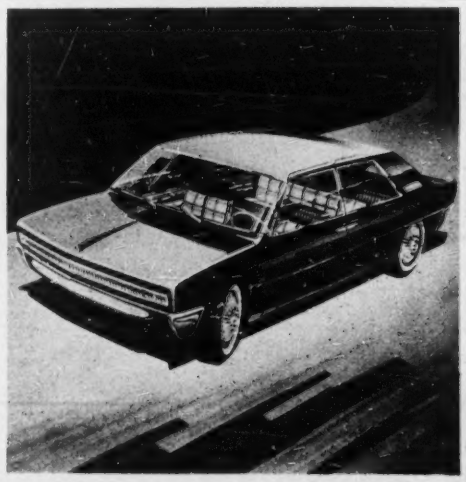
Or the names of the two new models that were introduced in 1931—during the depths of the Great Depression?

Or the reason why the Indianapolis 500 track measures 2½ miles?

Or the name of the first man to drive a mile in one minute?

If so—or even if you're close—you're ready for the Fifth Annual Automotive News Auto Trivia quiz. If you're normal, the test is likely to humble you. And if you're lucky, you could win a great dinner for four.

The quiz starts on Page 32 of today's Automotive News. But first, see if you can recognize the picture at right. If not, you might want to think twice about starting.



B. Brooks Stevens designed the Auto Familia as a "living room on wheels." At what event was it first presented?

Dedeurwaerder adds high Renault post

By Richard Johnson
Detroit Reporter

American Motors President Jose Dedeurwaerder was given an expanded role in Renault's worldwide automotive operations last week, but he will stay on as chief executive officer at AMC.

In a change that had been rumored for months, Dedeurwaerder was handed responsibility for worldwide sales and marketing at Renault as well as all automotive manufacturing operations outside France and Belgium. He was named executive vice president of Renault.

However, Dedeurwaerder, AMC's CEO since September, 1984, will hold his AMC and Renault positions concurrently, splitting time between AMC offices in Southfield, Mich., and an office in Paris.

The AMC board of directors last month elected Dedeurwaerder chairman of the board's executive committee, a key position previously held by former Chairman Paul Tippett. At the same time, Renault executive Pierre Semerena was elected AMC chairman and Joseph Cappy was promoted to chief operating officer.

Jose Dedeurwaerder

The recent changes in AMC's top management reflect a growing role for Cappy in the day-to-day management of the company. An AMC spokesman last week called Cappy's promotion a "prelude" to Dedeurwaerder's new responsibilities.

"This is like the other shoe falling," said the AMC representative, citing the recent AMC realignment.

Cappy's wider responsibility was further evidenced by the recent upgrading of Peter Guptill to vice president—North American sales and marketing, encompassing duties previously held by Cappy. All AMC operations now report to Cappy, while corporate staff reports to both Cappy and Dedeurwaerder.

Dedeurwaerder replaces Jean Phelupt, Renault's sales and marketing director, whose retirement took effect at the end of 1985. Dedeurwaerder's new manufacturing duties were previously held by Philippe Chauvel, who retains responsibility for Renault's manufacturing operations in France and Belgium.

An AMC spokesman last week said Dedeurwaerder will divide his time roughly in half between U.S. and European offices "until he sees how things shake out." Holding jobs on two continents will not be a major disruption, he said, since top AMC executives frequently travel to Europe. He said Dedeurwaerder's new classification at Renault includes his responsibilities here.

Renault has manufacturing operations in 22 countries outside France and Belgium. Besides the U.S. in 1984, Renault assembled about 628,000 vehicles in countries including Spain, Argentina, Yugoslavia, Portugal and Mexico.

"This can do nothing but improve the partnership," said the AMC spokesman. Renault owns 46.1 percent of AMC and has invested $645 million since 1979, including $50 million worth of debentures recently sold by AMC to Renault.

Dedeurwaerder, 53, joined AMC as executive vice president and a member of the board of directors in September, 1981, after 23 years in chiefly manufacturing positions at Renault. He was elected president and chief operating officer in January, 1982, and replaced Tippett as chief executive officer 16 months ago.

2 auto PACs wind up with $2.6 million

By Helen Kahn
Washington Bureau Chief

WASHINGTON.—Two Political Action Committees representing automobile dealers raised $2.6 million for 1984 election campaigns. The two PACs—Auto Dealers for Free Trade (ADFT) and NADA's Dealer Election Action Committee (DEAC)—raised $1,182,436 and $1,395,715, respectively, for those campaigns.

ADFT is not officially connected with any group. But the Jamaica (N.Y.) address of its sponsor and treasurer, Frank Glacken, is the same as that of Nemet Motors, which handles Nissan, Volvo, Jaguar and Peugeot. The firm also arranges for American tourists to bring in 10 foreign car lines from overseas.

Nemet Motors is owned by Thomas Nemet, former head of the Washington-based American International Automobile Dealers Assn. and now a member of ADFT's board of directors. That board includes two other imported-car dealers, a Mazda distributor, a publisher and Bob McElwaine, president of AIADA.

DEAC—which is NADA's PAC—is based at the association's headquarters in McLean, Va., and is sponsored by Ed Mullane Jr., a Ford and Nissan dealer from Bergenfield, N.J.

While DEAC spent $1,340,701 for federal candidates in 1984, ADFT spent only $483,850. Glacken said collected money was held back to be used during federal elections in 1986—which is

Wrangler will be the newest Jeep

Jeep Wrangler aimed at a new generation

By Richard Johnson
Detroit Reporter

American Motors and its Jeep subsidiary last week took the wrappings off an all-new small sport-utility vehicle—dubbed Wrangler—which replaces the venerable CJ that is being phased out of production this month.

Scheduled to debut in May, the Wrangler retains a classic open air CJ design, but was developed from the ground up and shares no components with its predecessor.

The vehicle is geared for a newer generation of sport-utility-vehicle buyers who, according to AMC officials, are less apt to take their vehicles off-road and who demand more in the way of creature comforts.

AMC is touting styling and on-highway ride comfort for the new vehicle, similar to advances made on the Cherokee and Wagoneer compact models two years ago.

AMC President Jose Dedeurwaerder has projected annual sales volume of about 30,000 for the new Jeep, which had previously been designated "YJ" and will retain the YJ name in Canada.

Production is due to begin in March at the Brampton (Ont.) assembly plant. The CJ models are being phased out at the company's Jeep assembly operations in Toledo. AMC has not announced the price of the Wrangler.

At 66 inches, the new vehicle is slightly wider than CJ's 65.3 inches. Overall length is 152 inches, compared with 153.2 for CJ. The wheelbase on both vehicles is 93.4 inches.

The standard Wrangler power plant will be a 2.5-liter, fuel-injected in-line 4-cylinder engine. Jeep's 4.2-liter in-line six will be optional.

A standard half-metal door is new on Wrangler, as is a one-piece rear-tire swing-away tailgate. Interior instrumentation is all-new, with updated gauges.

Three Wrangler models will be offered—two soft top versions and the Laredo hardtop package.

In a recent interview with Automotive News, Dedeurwaerder called the new Jeep an attempt to "reach a broader part of the market."

"The CJ has been a rugged, durable, typically off-road product aimed at one very specific type of

Ford elects Gilmour to board of directors

DEARBORN.—Allen D. Gilmour has been elected to the board of directors of Ford Motor Co. He also was designated a member of the Office of the Chief Executive, joining Chairman Donald E. Petersen, Vice Chairman William Clay Ford and President Harold Poling.

Allan D. Gilmour

In October, Gilmour was elected executive vice president and chief financial officer of Ford. Before that, he was vice president—external and personnel affairs. He joined Ford in 1960.

Sales decline again; off 15 pct. from '84

By Jenny L. King
Detroit Reporter

Christmastime low-interest-rate loan incentives on a wide range of domestic new cars came too late to have a positive effect on mid-month sales. The Dec. 11-20 period was the eighth consecutive one in which the total was less than that reported a year earlier.

Even so, sales for the 1985 calendar year remained some 200,000 units ahead of 1984 and easily will surpass the 8-million mark in the final reporting period.

But the 7.19-percent lead over 1984 established at the end of September when record sales were the order of the day was whittled down to plus 2.59 percent. The Jan. 1 through Dec. 20 total was 7,972,652 compared with 7,771,433 a year earlier.

Dec. 11-20 sales of 165,132 were down 15.84 percent from 196,209 in 1984 and included substantial declines for the Big Three. General Motors dropped 17.42 percent, to 95,049 from 115,095. Ford Motor Co. reported sales of 37,767 domestic passenger cars, down 20.70 percent from 47,035 a year earlier.

Chrysler Corp. was off 12.45 percent, to 23,216 from 26,516. American Motors' estimated 10-day sales were off 45.31 percent, to 1,750 from 3,200.

There was good news from Volkswagen, which reported a 41.50-percent jump in Golf sales. The Dec. 11-20 figure was 2,015 compared with 1,424 in 1984. Honda's domestic Accord sales were up 19.77 percent, to 3,520 from 2,939, and Nissan Sentra sales reached 1,815 for Dec. 11-20.

In market shares for the period, GM dipped to 57.56 percent from 58.66 percent. Ford was down to 22.87 percent from 23.97 percent. Chrysler moved up to 14.06 percent from 13.51 percent.

Also on the rise were VW, up to 1.22 percent from 0.73 percent; Honda, up to 2.13 percent from 1.50 percent, and newcomer Nissan, to 1.10 percent from no share in 1984. AMC wound up with the smallest piece of the whole, 1.06 percent, down from 1.63 percent.

There were nine selling days in the mid-month period both years. The recent daily-selling rate was a modest 18,348, down 15.84 percent from 21,801 a year earlier and second lowest for the calendar year. The early-August daily average, at 17,692, has that distinction.

The Dec. 11-20 sum topped the Dec. 1-10 period by some 4,000 units. The period record is 256,981, set in 1972.

Taurus, Sable recalled to fix ignition switch

WASHINGTON.—Ford Motor Co. is doing what it hoped it would not have to do: Recall its brand new Taurus/Sable cars.

On the market just one week and launched as Ford's best-built product ever, the aerodynamic Taurus/Sable line will be Ford's mainstay through the end of the decade. It represents a $3 billion investment by the company. The cars were delayed several months by various start-up problems.

According to a Ford spokesman 4,500 of the new cars are being recalled because of a possibly faulty ignition switch that would make it possible to remove the key even if the switch were not in the "lock" position.

The spokesman said that the switches were from an outside supplier and that only 200 of them are believed to be faulty. He said Ford dealers will inspect the cars and replace the faulty switches at no charge.

The recall is not safety-related, but Ford had to notify NHTSA because it involves federal anti-theft regulation. The Ford spokesman said the cars could be started if the faulty switch was not placed in the "lock" position, thereby making the car easier to steal.

Korean tire firms limit U.S. exports

SEOUL, South Korea.—Two South Korean tire manufacturers are expected to maintain their exports to the U.S. in 1986 at about the level of this year's shipments.

According to an official of the Trade and Industry Ministry, Hankook Tire Mfg. Co. and Kumbo Tire Mfg. Co. will ship about 3.8 million radial tires to the U.S. this year, about the same as last year.

It is reported that the two firms will limit exports until the determination of an anti-dumping petition that was filed in the U.S. Korean facturers have limited exports to the U.S. since 1983.

Will house 6 to 8 dealerships

Houston Autopark under way

HOUSTON.—Autopark 6, Houston's first automobile shopping center, is under construction. Six to eight dealerships are planned for the center.

Automobile parks have been highly successful in California but have never been tried in Houston.

When completed, the 38-acre Autopark 6 project will have total value of approximately $21 million.

Ford Motor Co. has purchased a five-acre site at Autopark 6 to be used for a Ford dealership that will be called Champion Ford. The general manager of the dealership will be Tony Gracely, presently manager of Mort Hall Ford.

The new dealership will have a two-story showroom with offices on the first floor and also on the second floor overlooking the showroom.

Another six-acre parcel has been purchased by Sam White, owner of Sam White Oldsmobile and Isuzu Co. and Sam White Datsun. Parcels available for additional dealerships will range in size from two to eight acres.

The developer of the Autopark 6 project is Southwest Autopark, Ltd., a limited partnership consisting of Houston Property Development Co. and J.M. Monk Building Co., Inc.

"Judging by the interest generated already, Houston is ready for this type of auto park," said Charles Kenner, president of Houston Property Development Co.

"Houston, like Los Angeles, is a spread-out city. Putting several auto dealerships in one location provides a great service to the consumer and can save him enormous amounts of time driving from one dealership to another.

"For the dealerships, of course, the advantage is that they feed off each other's traffic," Kenner said.

Jim Monk, president of J.M. Monk Building Co., noted that the concept operates on the same principle as the conventional mall with several major anchor stores.

"The automobile dealerships benefit from being next to each other," he said, "just like Foley's and Sears benefit from being in the same mall. In fact, in California, customers drive to auto parks from substantial distances, just because they know they can save time once they get there and are more likely to find the car they want in one trip."

Kenner said that Southwest Autopark, Ltd., selected a site located in the heart of an area of residential and commercial growth, with only one other automobile dealership situated within seven miles.

"Most other dealerships," said Kenner, "are at least 12 miles away, and this is an exploding residential area, just waiting to be served. Right now, an average of 33,148 cars pass our Autopark 6 site daily. By 1990, the number is projected to increase to 57,600 cars daily."

Southwest Autopark, Ltd., will sell property directly to the automobile manufacturer or to individuals who want to establish a dealership. It will build to suit or will build and lease a facility to a dealership.

"Dealers will also benefit from being able to organize joint promotional and advertising efforts and will be able to share the cost of services, such as courtesy cars or vans to transport customers home or to work," Kenner said.

Dealerships will be located facing each other on either side of a road that will run through the center of the property. Green belts will be planted between dealerships.

Autopark 6 is adjacent to a $500-million, 563-acre community where a $25-million shopping center and residential projects are under construction.

J.M. Monk Building Co. has designed and constructed more than over 80 automobile dealerships in Houston, Dallas, San Antonio, Austin, Santa Fe and other markets.

Thomas, Snyder reelected to top posts at HUF, ASF

WASHINGTON.—L.D. Thomas, president of Amoco Oil Co., and William B. Snyder, chairman of GEICO Corp., have been chosen to continue to lead the Highway Users Federation.

Thomas was reelected to a second term as chairman of the Highway Users Federation, and Snyder accepted his fourth term as chairman of the Automotive Safety Foundation, the federation's educational and research affiliate.

Elected vice chairmen of the HUF were Patrick C. Ross, president, B.F. Goodrich Co., and F. Alan Smith, executive vice president, finance, General Motors. Smith also serves as HUF treasurer. Reelected HUF secretary was G. Mack Dove, president, AAA Cooper Transportation.

Frank L. Nageotte, president of Greyhound Corp., was reelected vice chairman of the Automotive Safety Foundation. Smith and Dove will continue to serve as ASF treasurer and secretary, respectively.

All officers of the federation and the foundation are elected for one-year terms.

Newly elected to one-year terms on the HUF executive committee were: Richard M. Donaldson, vice president, public and government affairs, Standard Oil Co. (Ohio); Charles P. King, senior vice president—sales, Nissan Motor Corp. in U.S.A.; Donn R. Osmon, vice president, marketing and public affairs, 3M Co., and Robert G. Wallace, executive vice president, Phillips Petroleum Co.

The Highway Users Federation is supported by 400 businesses, industries and associations to promote safer, more efficient highway transportation.

The Automotive Safety Foundation, founded in 1936, encourages traffic safety on behalf of private industry and fosters educational and research programs for safe use of roads and streets.

First autopark for Houston

Southwest Autopark, Ltd., is developing Autopark 6, Houston's first automobile shopping center. Two of the six to eight sites have been spoken for—one will be a Ford dealership and the other has been bought by the owner of Oldsmobile, Isuzu and Nissan dealerships. The 38-acre site is adjacent to a 563-acre area that includes residential units and a shopping center.

One Day Auto Lease Sales Training Seminars

TOPICS

- New Profit Opportunities
- Developing a Business & Marketing Plan
- Lease Sales Management
- Lease Selling Skills
- Shopping Lease Sources
- Lease Rate Construction
- Prospecting, Networking, and Referrals
- Telephone: "The Lease Life Line"
- Selling the Lease with the Numbers
- Lease Tracking & Lease
- The Art of Credit Management
- Showroom Conversion

PROGRAM DESCRIPTION

Leasetrack has developed and produced the first controlled selling skills training and management system that is integrated with today's sophisticated brokered leasing plans.

The Leasetrack Auto Lease Sales Training Seminar will help dealership and leasing company executives, managers and sales people attain lease selling proficiency and competence. You will learn nuts and bolts, "Do's" and "How To's" in a no-nonsense management systems approach that works!

SEMINAR DATES

BOSTON	Jan. 15. Embassy Suites
HOUSTON	Jan. 22. Marriott Galleria
DALLAS	Jan. 23. Dallas Hilton

Coming in

■ February, March & April: ■

DETROIT, NEW YORK, ATLANTA, WASHINGTON D.C.

Seminar fee: $245 per person, $220. each additional person

Enrollment is limited. Register immediately.

Automotive News analysis of new-car registrations based on R.L. Polk & Co. statistical report. New York, Oklahoma for 1984 and Oklahoma for 1985 from manufacturers' sales records.

972,928 counted; imports, domestics top 1984

Registrations set October record

By Jenny L. King
Detroit Reporter

Registrations of new domestic and imported cars in October soared to the highest level ever recorded for the month.

October registrations, according to figures compiled by R.L. Polk & Co., numbered 972,928, up 16.62 percent from 834,300 the preceding year. Compared with the any-month record of 1,104,999 set in September, October registrations were off 11.95 percent.

Table on Page 34

The month's total included 698,381 domestics and 274,547 imports. Domestics were up 11.57 percent from 625,970 in October, 1984, but were off 15.88 percent from 830,230 in September.

Imports were up 31.78 percent to a record 274,547 from 208,330 a year earlier. Their share of the market was up 3.25 percentage points, to 28.22 percent from 24.97 percent.

Ford Motor Co. suffered the worst setback in terms of market share. Ford gave up 2.40 percentage points in penetration, dropping to 18.37 percent in October from 20.77 percent a year earlier.

General Motors slipped 0.34 percentage points, to 41.75 percent from 42.09 percent. American Motors was off 0.70 percentage points which, although not as much as Ford, was actually far more devastating, since AMC's share dwindled to 1.14 percent from 1.84 percent.

Chrysler Corp. was the only domestic maker to compete favorably with the imports in October. Chrysler's share of the total market was up 0.19 percentage points to 10.52 percent from 10.33 percent. Miscellaneous domestics added only 13 units to the October total and did not account for a significant percent either year.

Viewed without imports, the October market was divided in this fashion: GM had 58.17 percent; Ford, 25.59 percent; Chrysler, 14.65 percent, and AMC, 1.59 percent. A year earlier GM had 56.10 percent; Ford, 27.69 percent; Chrysler, 13.76 percent, and AMC, 2.45 percent of the domestic market.

The imports' 28.22-percent share of the total October market was the largest slice for any single class. Domestic intermediates claimed 26.96 percent; compacts, 15.69 percent; subcompacts, 11.61 percent; luxury models, 9.52 percent, and standards, 8.00 percent.

Omitting imports, the October market included 37.56 percent intermediates, 21.86 percent compacts, 16.17 percent subcompacts, 13.26 percent luxuries and 11.15 percent standard-size domestics.

Year-to-date registrations were up 8.64 percent through the end of October, climbing to 9,212,086 from 8,479,096 in 1984. There was a 25.97-percent difference between 1985 and 1983, when registrations totaled 7,313,078.

Domestic registrations at the end of 10 months totaled 6,778,705, up 6.09 percent from 6,389,456; they were up 28.62 percent from 5,270,204 in 1983.

Imports were up 16.45 percent year to date, to 2,433,381 in 1985 from 2,089,640 in 1984. They increased their market share to 26.42 percent from 24.65 percent the previous year.

Over 10 months' time, GM dropped 2.48 percentage points, to 42.45 percent from 44.93 percent. Ford was up 0.17 percentage points, to 19.24 percent from 19.07 percent. Chrysler, up to 10.67 percent from 9.44 percent, had an extra 1.23 percentage points.

AMC dropped 0.69 percentage points over the year—to 1.22 percent from 1.91 percent—and miscellaneous domestics again failed to muster enough strength to earn even 0.01 percentage point.

Excluding imports, the 10-month market included GM with 57.68 percent; Ford, 26.15 percent; Chrysler, 14.51 percent, and AMC, 1.66 percent. A year earlier GM had 59.63 percent; Ford, 25.31 percent; Chrysler, 12.53 percent, and AMC, 2.53 percent.

Treasury submits plan to end unitary taxation

By Jake Kelderman
Washington Reporter

WASHINGTON.—The Reagan Administration unveiled its long-awaited move to ban the use of unitary taxation by states as Congress moved toward its holiday recess.

Under the unitary tax system, multinational corporations with subsidiaries in various states—like Toyota, Nissan, Honda and other foreign car makers—are taxed not on the revenues of the subsidiaries alone, but on the basis of their worldwide profits.

Seven states currently use the taxation system. They are California, Utah, Alaska, Montana, Idaho, North Dakota and New Hampshire.

The Reagan Administration, as well as the governments of Japan, Great Britain, West Germany, Canada, Belgium, Italy and Switzerland, have objected to the practice on grounds of fairness and equity.

In announcing the Administration's proposal, Treasury Secretary James Baker III said, "The continued imposition of state corporate income tax on a worldwide unitary basis has a serious adverse impact on the conduct of the foreign economic policy of the U.S."

Japan and the other nations had threatened to retaliate against the U.S. if it did not eliminate the unitary tax system.

If enacted by Congress, the Multistate Tax Commission, which represents 30 state governments, believes the plan will result in the loss of up to $1 billion in revenue for 32 states.

In addition to banning the use of the unitary tax system, the Administration bill would also limit a state's ability to tax dividends paid by foreign subsidiaries of American multinational corporations.

In return, multinational corporations would be required to detail their tax liability in each of the states in which they operate and agree to make this domestic disclosure "spreadsheet" available to all state taxing authorities, the Treasury Department said.

Hino reported looking to Taiwan for truck parts

TOKYO.—Hino Motors, Ltd., a truck-producing affiliate of Toyota Motor Corp., reportedly will import components from companies of Kuozui Motors Group of Taiwan to help promote that country's parts industry.

According to the publication Nihon Keizai, Hino will become the first Japanese vehicle manufacturer to import parts made in Taiwan.

Hino owns 45 percent of Kuozui Motors, which is said to be planning to build Toyota trucks in Taiwan.

Hino will launch its parts purchasing program early this year by acquiring $499,000 worth of leaf springs for use in repairs.

The move was made possible by a program introduced by the Taiwanese Government to promote the country's auto industry with the possibility of opening up the Taiwanese market in the future.

Cars up 18 pct.; trucks, 28 pct. in November

Sales climb again in Canada

By Jenny L. King
Detroit Reporter

November sales of new North American-built cars and domestic-plus-captive trucks in Canada were up substantially over the year-earlier total.

Cars rose 18.18 percent, and trucks advanced 28.53 percent.

Car sales recorded their fourth consecutive monthly gain and truck sales have been up every month of 1985.

Unlike the U.S. experience, Canadian sales of North American-built passenger cars moved ahead in November, up 18.18 percent to 60,748 from 51,404. Four of the five major makers were included in the upswing; only American Motors fell from its year-ago stance.

Ford made the greatest progress, reporting a 29.15-percent sales advance. Ford dealers delivered 15,791 units in November, 1985, compared with 12,227 a year earlier. General Motors reported sales of 31,675 cars, an increase of some 5,000 cars and up 17.87 percent from 26,873.

Chrysler sales of 11,595 were up 16.73 percent from 9,933. American Motors reported a 39.02-percent decrease, with sales dropping to 1,100 from 1,804 (including 202 imported Renaults this year and 436 last year). Volvo sales numbered 587, up 3.53 percent from 567.

GM sales earned 52.14 percent of the domestic new-car market, down only slightly from 52.28 percent in November a year earlier. Ford was up to 25.99 percent from 23.79 percent. Chrysler dipped to 19.09 percent from 19.32 percent, while AMC's share dwindled to 1.81 percent from 3.51 percent and Volvo withdrew to 0.97 percent from 1.10 percent.

Truck sales of 27,595 in November were up 28.53 percent from 21,469 a year earlier. There were increases for all four major domestic truck builders, with AMC's 89.38-percent gain the largest. Jeep sales nearly doubled year to year, to 1,409 from 744.

GM truck sales were up 35.64 percent, to 12,362 from 9,114. Ford reported sales of 9,604 new trucks, up 24.45 percent from 7,717. Chrysler said its November truck sales of 4,220 set a record for the month. They were up 8.37 percent from 3,894 a year ago and represented the 30th consecutive monthly increase for Chrysler Canada.

The truck market in November was divided in this manner: GM had 44.80 percent, up from 42.45 percent; Ford had 34.80 percent, down from 35.94 percent; Chrysler had 15.29 percent, down from 18.14 percent, and AMC had 5.11 percent, up from 3.47 percent.

Year-to-date truck sales added to 303,772, up 25.45 percent from 242,148 in 1984. Car sales at the end of 11 months stood at 742,814, up 8.76 percent from 682,982.

Reward program against auto theft rolling in Michigan

DETROIT.—Good results are already being achieved by a reward program set up in Michigan by law-enforcement agencies, prosecutors and the insurance industry to link citizens with police in the fight against auto theft.

The program is called HEAT, which stands for Help Eliminate Auto Thefts. It was established last fall, and it has already led to two arrests of suspected car thieves, with $1,000 awarded to each citizen providing information.

HEAT is a tip-reward program that pays citizens for information that leads to the arrest and prosecution of suspected car thieves. Through a statewide toll-free tip line, persons can report stolen cars, suspected thieves and chop-shop operations, with guaranteed anonymity.

In its first eight weeks of operation, 163 calls were received through the tip line, 113 of which were actual tips; several investigations are underway as a result.

The HEAT number is monitored by the Michigan State Police Criminal Investigation Section in Livonia, which directs the tips to the appropriate police agencies for action.

Rewards under the HEAT program are: Up to $1,000 for the arrest and prosecution of suspected individual car thieves; up to $1,000 for the issuance of a warrant for suspected theft-ring members and/or chop-shop operators, and/or up to $10,000 for the arrest and binding over for trial of suspected theft-ring members and/or chop-shop operators.

Unlike other crime tip-reward programs, HEAT will offer payment on the basis of prosecution—not necessarily conviction—of car thieves.

Brown succeeds Kubly as head of Art Center

PASADENA.—David R. Brown has been appointed president of Art Center College of Design.

He succeeds Don Kubly, who retired in December after 22 years as head of the college. Brown is the third president in Art Center's 55-year history.

Award for Miller

Vince Miller, right, owner of Don-A-Vee Motors, Bellflower, Calif., is congratulated by Steve Center, American Motors Western regional manager. Miller was named to AMC's Hall of Fame for his commitment to community affairs and his "outstanding contributions" to AMC since 1961.

Hearings slated for 3 states on enforcing '55'

WASHINGTON.—Maryland, Arizona and Vermont have one last chance to prove they are in compliance with the national 55-MPH speed-limit law, the Department of Transportation has announced.

The agency said three of its administrative law judges will hold formal hearings in Washington on state compliance with the speed-limit law. Dates and times for the hearings have not been set.

The judges must issue a finding before the end of February on whether the states are in compliance.

In February, 1985, DOT notified the three states that based on state-submitted data, they did not appear to be in compliance for the period Oct. 1, 1983, to Sept. 30, 1984. After an informal hearing, the administrators of NHTSA and FHWA notified the states that they were not in compliance with the law. All three states then requested a formal hearing.

FHWA has told the states that until the results of their formal hearings are known, they may not obligate 10 percent of their non-interstate federal highway funds, which were distributed Oct. 1, 1985.

After the formal hearings, the department will make a final compliance decision, the agency said.

Kruse auction in Scottsdale lists 500 cars

SCOTTSDALE, Ariz.—Authentic vintage, collector and celebrity cars will be featured here at the 15th annual ITT Kruse Southwestern U.S. International Collector Car Auction and Show Jan. 17-19.

More than 500 classic and collector cars are expected for the three-day "Scottsdale '86" event, which is sponsored by ITT Kruse International. Dean Kruse will conduct the auction.

An Imperial Palace Collection car, a 1934 Duesenberg J343 Willoughby-bodied berline, never before offered at pubic auction, highlights the offerings. Also represented will be such makes as Mercedes-Benz, V-16 Cadillac, Packard, Buick, Rolls-Royce, Auburn, Jaguar and Mustang.

A 1939 Mercedes-Benz 770, claimed to be Hitler's parade car, will be on display; it will not be for sale.

Mercedes to back Boston Marathon

MONTVALE, N.J.—Mercedes-Benz of North America has become the automotive sponsor of the Boston Marathon.

The sponsorship agreement with the Boston Athletic Assn., which begins in 1986, includes the awarding of 190-E 2.3 sedans to both the male and female winners.

The agreement follows MBNA's second year as the automotive sponsor of the New York City Marathon, staged in October. The 90th Boston Marathon will be run April 21, 1986.

Anglo American acquisition

BLOOMFIELD HILLS, Mich.—Anglo American Auto Auctions, Inc., has acquired Capital Auto Auction, Inc., Columbia, S.C. This brings to 12 the number of auto auctions in the Anglo American group.

December and fourth quarter top '84

Last-half auto output best since '78

By Kathy Boyer
Detroit Reporter

Second-half domestic auto production for 1985 of 3,806,603 cars —up 6.97 percent from the 3,558,496 built during the same period a year earlier—was the best output for that period since 1978, when 4,194,048 cars were produced.

Fourth-quarter production of 1,995,872 cars was up 3.16 percent from the 1,934,772 built in the fourth quarter of 1984.

December's auto build of 561,439 units was down 16.29 percent from November's 670,693 but was 1.31 percent more than the year-ago month's 554,159.

Scheduled output of 65,025 cars for the post-holiday week ended Jan. 4 (a two-day week) was down 60.59 percent from the 165,014 cars built during the last full work week of 1985 (ended Dec. 21).

The estimated output last week also fell 41.64 percent from the year-ago week's 111,426, when the makers worked three days.

Companies shared last week's estimated production as follows: General Motors, 60.75 percent; Chrysler Corp., 16.61 percent; Ford Motor Co., 16.39 percent; Honda of America Mfg. Co., 2.54 percent; Volkswagen of America, 1.45 percent; New United Motor Mfg. Co., 1.17 percent, and Nissan Motor Mfg. Co., U.S.A., 1.09 percent.

American Motors' Kenosha plant was closed last week for inventory adjustment. Production is expected to resume today (Jan. 6).

Saturday (Jan. 4) overtime was slated for the following GM plants: Doraville, Ga.; Framingham, Mass.; Tarrytown, N.Y., and Detroit.

Daily overtime is scheduled this week at these Chrysler plants: Belvidere, Ill.; Newark, Del., and St. Louis No. 2.

Canadians hit year-end highs for auto, truck production

Vehicle makers in Canada set records in the final periods of last year.

The truck manufacturers reported their best second half ever: 383,679 trucks assembled. Output for the period was 1.90 percent more than the 376,516 completed during the second half of 1984.

Fourth-quarter production of 203,022 trucks, also an all-time high, was 1.98 percent more than the 199,074 assembled in the year-ago period.

December output of 55,789 trucks was also the best December production ever, but only slightly (0.34 percent) above the year-ago month's 55,600.

Last week, during a two-day work week after the holidays, truck makers scheduled production of 7,844 trucks, 54.93 percent below the 17,405 completed during the full work week ended Dec. 21.

Last week's scheduled build was also down 33.53 percent from the year-ago week's 11,801 (a three-day week).

Canadian auto makers also closed the year with their best second half ever.

Second-half output for 1985 of 532,946 cars was 14.74 percent more than the 464,475 units completed in the year-ago period.

The makers reported fourth-quarter output of 286,186 cars, the best build since 1978 when 292,183 units were assembled. Production for the fourth quarter was 11.64 percent above the 256,357 completed in the year-ago period.

December production of 74,402 cars also marked the best output for that month since 1978, when 85,377 units were assembled.

December's build was 38.39 percent below November's 103,893 but was 23.30 percent more than the 60,344 completed in December, 1984.

Last week's estimated production of 6,148 cars (which reflected the holiday week) was 71.81 percent below the 21,808 assembled the week ended Dec. 21.

Last week's targeted output was also 46.26 percent lower than the year-ago week's 11,441—a three-day week.

Truck makers notch three gains at close of 1985

Domestic truck builders completed 1,700,600 units in the second half of 1985, making it the best second half since 1978 when 1,836,955 trucks were assembled.

The second-half output was 13.31 percent more than the 1,500,901 for the year-ago period.

Fourth-quarter output of 874,017 trucks—12.05 percent more than the year-ago period's 780,055 —was the best fourth-quarter production since 1978, when 980,442 units were assembled.

December's build of 241,322 trucks, down 17.20 percent from November's 291,446, was 14.25 percent more than the year-ago month's 211,229 and the best output for that month since 1978, when 276,248 units were completed.

Estimated production of 29,987 trucks last week, a two-day work week after the holidays, was 59.57 percent below the 74,162 completed during the full work week ended Dec. 21.

Last week's scheduled output was down 19.15 percent from the year-ago week's 37,089, a three-day week.

Overtime was scheduled for Saturday (Jan. 4) at General Motors plants in: Lordstown, O.; St. Louis, and Moraine, O.

Dealer Sansone to serve term for tax evasion

MIDDLETOWN TOWNSHIP, N.J.—Although faced with the strong possibility that he will lose some of his new-car dealerships, Paul J. Sansone, 49, who owns nine new-car outlets in Central New Jersey, will have to serve six months in jail for tax evasion.

In addition to the jail term, Sansone will serve 10 years' probation and was fined $10,000.

District Judge Clarkson S. Fischer turned down a request to suspend the jail sentence and instead require long community service. The U.S. Attorney's Office had opposed any change of the jail term and called this one of the largest cases of tax evasion ever in New Jersey.

Sansone was charged with failing to report $1,261,232 in personal and corporate income from 1979 to 1982, when he should have paid $658,309 in taxes.

According to Sansone's attorneys, Toyota said it will suspend his franchise to operate Lakewood Toyota in Lakewood and General Toyota in Woodbridge, apparently because he is going to a jail. Had he been put on probation, even for a long period, he might have been able to keep his dealerships, Sansone's attorney said.

Sansone also owns Plaza Nissan Datsun and Plaza Ford in Neptune, N.J., in addition to interests in five other new-car dealerships in this region.

Rockwell establishes toll-free telephone link

TROY, Mich.—A single, toll-free telephone number has been established for Rockwell International Automotive Operations. It is (800) 535-5560.

Rockwell said it will provide 24-hour telephone service linking Rockwell's six regional offices and fleet operators, independent operators and dealers.

Economists: best of times may be over

By Michelle Krebs
Financial Editor

Economists say the best of the good years are over for the U.S. domestic auto industry—and that 1986 will be a good, but not a banner, year.

Today's Automotive News World Outlook concludes that 1986 will set the stage for a series of down years that will go into the next decade and maybe the next century.

The import share—mainly Japanese—of the U.S. auto market will continue to rise, likely surpassing three million units this year, up from 2.8 million in 1985.

North American car production, which includes the U.S. and Canada, will fall, dropping by nearly 1.3 million units in 1986, while Japanese makers boost production in the U.S. and Japan.

By the 1990s, Japanese auto production in the U.S. will reach 1.4 million units of capacity, according to the World Outlook, a quarterly service of Data Resources, Inc., and Automotive News. At the same time, U.S. makers and suppliers will rush offshore for cheaper sourcing.

The trend, which will be evident in 1986 and firmly entrenched by the 1990s, means the best years have passed for domestic auto makers and domestic automotive suppliers as global competition intensifies, economists say.

The grim scenario for the 1990s depicts a U.S. market with overcapacity, layoffs, collapsing prices and financial difficulties among U.S. manufacturers, a situation

Daihatsu pushes

OSAKA, Japan.—Daihatsu Motor Co. plans to increase production to one million units annually from the current 717,000 in about three years, according to President Tomonaru Eguchi. The company is seeking to boost sales of minicars to snare a market share of 10 percent, compared with the current 7.9 percent.

U.K. sales set record

LONDON.—New-car sales in the U.K. set a record of 1,832,408 in 1985, according to the Society of Motor Manufacturers and Traders. The total was up 4.7 percent from 1984 and topped the previous record, set in 1983, by 2.8 percent. Ford Escort, with 157,269 units, continued as the top seller, followed by Vauxhall Cavalier, 134,335, and For

'Better' gas needed, GM tells oil firms

By Louise Kertesz
Detroit Reporter

A letter sent by General Motors Vice Chairman Howard H. Kehrl to major oil companies said that currently available gasoline causes operating problems in engines with port fuel injection (pfi).

Oil companies contacted by Automotive News don't agree with GM and, at presstime, GM was downplaying the situation.

The letter was excerpted for the press by Mobil Oil Corp. Since GM singled out Mobil as a gasoline that prevents the pfi problems, the letter has also fueled an advertising campaign which is in the works there. "This is a hot pancake on our griddle," a Mobil spokesman said.

The problem is that deposits can form at the injectors' tiny openings, restricting fuel flow. More on the road have pfi—which is increasingly replacing carburetors. Other makes are also adopting such systems.

"At present and for the foreseeable future, there is a need for gasolines in the marketplace that will prevent the injector deposits," Kehrl said.

He told the oil companies, "I would appreciate learning as quickly as possible of your plans to market and advertise gasolines that perform optimally with port fuel injector systems so that we can inform our customers."

He added, "Mobil is presently marketing and advertising such a fuel."

Kehrl concluded, "I am certain you will agree that this is a critical situation which affects both the petroleum and the auto industries."

A GM spokesman told Automotive News that the letter—sent in mid-November—is just part of the historical dialog between auto manufacturers and the oil companies, through which the oil industry has responded to the auto makers' changing needs.

GM sportsters to get top-secret engine for '91

By Michelle Krebs
Financial Editor

The 1991 Pontiac Firebird and Chevrolet Camaro will be the first General Motors models to use GM's top-secret Manhattan Project engine.

The Manhattan Project, named after the World War II atom bomb operation, is charged with developing an ultra-lightweight, high-output small engine using alternative materials including ceramics.

The totally redesigned GM80 cars—Firebird and Camaro—will be introduced in 1990 but the new engine won't be available until the following model year, sources say.

The GM80 models also will have plastic body panels hung on a space-frame structure like the Pontiac Fiero. In addition, GM is considering a four-wheel-drive version. Sources at supplier companies say GM has discussed with them the purchase of components for a four-wheel-drive system.

The Manhattan Project engine is said to include the use of lightweight alloys—aluminum and magnesium—and ceramics.

Ceramics experts say a largely ceramic engine is still 10 to 15 years away because the costs are prohibitive. Nevertheless, nearly every auto maker is in hot pursuit of ceramic technology.

Ceramics withstand high temperatures and could bring about an efficient and powerful engine that retains heat energy normally lost through the cooling system and tailpipe.

In addition, ceramics are extremely hard, which raises the possibility of improving engine wear or eliminating some or all of the lubrication system.

GM is very interested in a ceramic engine and has talked recently with its Japanese affiliate, Isuzu, about its ceramic technology, sources said. GM owns about 34 percent of Isuzu, which has said it will have a ceramic engine by 1990.

The Manhattan Project is GM's first effort in more than a decade to design a new engine with a clean-sheet approach.

GM is in a hurry to put the engine into production. A year ago, Manhattan was only a research project. By last summer, GM had announced it would build a $61-million, 360,000-square-foot home for the 300 design and engineering people working on Manhattan Project and other prototype engines.

Tracer said name of Ford from Mazda

By Richard Johnson
Detroit Reporter
Copyright, Automotive News, 1986

Ford of Canada reportedly has settled on Tracer as the name for the Mazda 323-based front-wheel-drive subcompact it will import from Taiwan beginning later this year.

The Ford subsidiary is planning to import 30,000 units annually beginning this fall, responding to Hyundai's successful entry into the low end of the Canadian market.

A Ford of Canada spokesman said last week that the vehicle has not been named, but company sources have pegged Tracer as the label. Asked about Tracer rumors, the Canadian spokesman said, "That's the one I've heard most consistently."

A Ford spokesman in Dearborn said the Tracer name for Canada is under consideration but "not pinned down."

The cars will be assembled by Ford's Taiwanese affiliate, Ford Lio Ho, and sold as 1987 models through both Ford and Lincoln-Mercury dealers. They will supplement the company's Canadian line rather than replacing an existing model.

Ford has said the 1,600-cc sedan will be priced competitively with other cars from low-labor-cost countries. The car is based on Mazda's new 323 subcompact, according to company sources, but

Hidden Image

What is it, Mazda or Mustang?

Recently spotted undergoing testing in the U.S. is this sporty coupe. The two-door, based on a Mazda 626, features aerodynamic headlights, stylishly bulged fenders and a semi-wraparound backlight. Under the skin is a turbocharged four-cylinder engine and an antilock braking system. The real question: Will this show up in the Mazda 626 line or could it be the next Ford Mustang?

Toyota keeps lid on exports to U.S.

NAGOYA, Japan.—Toyota President Shoichiro Toyoda said his company plans to continue to keep exports to the U.S. below one million units in 1986, according to Kyodo News Service.

Toyota exported 940,000 cars and trucks to the U.S. in 1985.

Concerning the strategy Toyota has adopted in connection with its plan to start production in Georgetown, Ky., in 1988, Toyoda told the news service that the company would make every effort to reinforce its sales network, particularly in the Midwest.

On Toyota's interests in other markets, Toyoda said his company decided to reverse an earlier decision and set up a joint automotive parts production venture in Taiwan.

He said the Taiwanese Government now has a better understanding of Toyota's idea of gradually raising the local content of motor vehicles built there, first by aiding the growth of the Taiwanese parts industry.

Earlier, Toyota had turned down a government request for a joint venture in Taiwan to build cars because of a disagreement over local content and other requirements.

Toyoda told Kyodo that Taiwan could become an export base for Toyota in the future if quality and cost conditions are met.

Toyoda also said Taiwan and South Korea used to be "distant countries" in a business sense for Toyota. He said his company now would work to build up sales to such countries.

According to Kyodo, Toyoda attributed the recent plunge in exports to China chiefly to that country's reduced foreign currency reserves. He also said there would be no change in Toyota's policy of aiding the growth of China's automotive industry.

Wagner to head Toyota sales

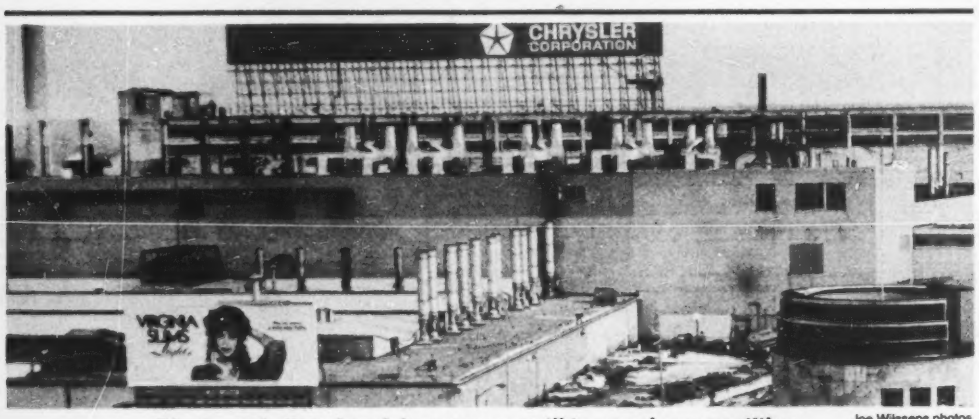
Albert W. Wagner

TORRANCE, Calif.—Albert W. Wagner has been named national sales manager for Toyota Motor Sales, U.S.A. He succeeds Robert W. McMillan, sales vice president, who will retire.

James E. Press has replaced Wagner as general manager of the San Francisco region. Press has been general marketing and distribution manager since January, 1985.

Wagner joined Toyota in 1984 after 22 years with Chrysler Corp. His last post at Chrysler was Dodge advertising manager.

Press has been with Toyota since 1970 and and has served in marketing, distribution, product planning and service assignments.



Plant needs "modern labor agreement" to remain competitive

Joe Wilssens photos

Chrysler Jefferson on hot spot

By Mary Connelly
Detroit Reporter

Chrysler Corp. has signaled to the UAW it wants a streamlined labor agreement at its aging Jefferson Avenue assembly plant in Detroit.

Chrysler said it has discussed with the union the long-range future of the plant and the need for a "modern labor agreement" to remain competitive.

Chrysler is striving for fewer job classifications and simplified work rules at its plants, including Jefferson, to boost productivity and flexibility.

Chrysler has no product plan for the Jefferson plant after the 1987 model year. The plant builds compact Plymouth Reliant and Dodge Aries models.

Union and Chrysler officials have been meeting to reach a local agreement following ratification of a three-year national contract in October.

The union said it has not yet received a proposal from Chrysler but said it expected a request for a "streamlined" agreement.

"We are waiting for Chrysler to make a proposal," said Wolf Lawrence, president of UAW Local 7, which represents workers at the plant. Lawrence said a Jan. 26 membership meeting has been scheduled to discuss a possible new labor agreement.

The City of Detroit has also been involved in "tripartite" talks with Chrysler and the UAW in an effort to keep the plant operating. The city has not specified what inducements it will offer Chrysler to renovate, and possibly expand, the plant.

The UAW/Chrysler agreement contains a letter of intent stating that the plant will continue operating through the 1987 model year.

Gerald Greenwald fends off reporters

"The important thing is everyone is talking and looking at a future for Jefferson Avenue," UAW President Owen Bieber said last week.

"The Chrysler department of the UAW wants to do what it can to keep Jefferson alive and to keep employment in Detroit," said a union spokesman.

"It's not unique to Jefferson," a Chrysler spokesman said of possible proposals for changes in the traditional contract. "We've tried to do it at other plants as well."

Japanese urged to extend curbs

By Geoff Sundstrom
Washington Reporter

WASHINGTON.—Thirteen senators have sent letters to Japanese Prime Minister Yasuhiro Nakasone and Michio Watanabe, head of the Ministry of International Trade and Industry, urging another year's extension of Japan's 2.3-million limit on car exports to the U.S.

The letters were initiated by Senator Dan Quayle, Indiana Republican, and were signed by four other Senate Republicans and eight Democrats.

They inform the Japanese Government that "this would be an especially unfortunate time for Japan to further increase its auto imports to the U.S., and in so doing further exacerbate our already tenuous trade relationship."

The identical letters say, "We respectfully urge you to make every effort to encourage further voluntary restraint on the exportation of automobiles to the U.S. Without such efforts, the trade imbalance that now exists between our two countries may well continue to grow, fueling sentiment for more unilateral trade protection in the U.S."

Quayle's letters to the Japanese began, "In March, 1986, export limits voluntarily imposed on the sale of Japanese automobiles to the U.S. will expire.

"We write to you today to urge that, as part of an overall effort to bring about a more equitable trade relationship between the U.S. and Japan, the voluntary restraint on exports of automobiles to the U.S. be extended for another year at the current 2.3-million-unit level."

The letters say that recent measures undertaken by both the U.S. and Japanese governments to ease trade friction are "welcomed," but that "good intentions have not produced adequate results."

The senators said that "while the U.S. auto industry has regained much of its economic vigor, many of our domestic industries that suffer from a lack of market access or from dramatically growing imports have not."

The senators called specifically for unrestricted market access in Japan for U.S. telecommunications, service and agricultural products.

Besides Quayle, the letters were signed by the following Republican senators: Richard Lugar, Indiana, chairman of the Senate Foreign Relations Committee; John Heinz and Arlen Specter, Pennsylvania, and Robert Kasten, Wisconsin.

Democratic senators signing the letter were: Thomas Eagleton, Missouri; Alan Dixon and Paul Simon, Illinois; John Glenn and Howard Metzenbaum, Ohio; Donald Riegle and Carl Levin, Michigan, and William Proxmire, Wisconsin.

Iacocca sees lid kept on by Japanese

By Mary Connelly
Detroit Reporter

LOS ANGELES.—Chrysler Corp. Chairman Lee A. Iacocca said he does not expect Japanese auto makers to boost exports to the U.S. beyond current levels.

Addressing a news conference at the Greater Los Angeles Auto Show, Iacocca also said dollar/yen changes, proposed federal tax reforms and use of financing incentives may aid domestic producers in fighting off additional market penetration by imports.

"I imagine they'll hold still at 2.3 million, plus their production here, plus their parts shipments," Iacocca said.

Iacocca also predicted one more price hike by Japanese makers during the current model year. Coupled with recently announced increases, he forecast price hikes totaling $800-$1,000 on a "run-of-the-mill Toyota."

Domestic makers' market penetration could increase, he said, as the cost difference between American and Japanese models is narrowed due to import price hikes and domestic financing incentives.

Iacocca said he expects financing incentives to continue throughout the model year on selected car and truck models to prevent production cutbacks.

Iacocca spoke at the unveiling of the Maserati-Chrysler luxury sports coupe code-named the Q-coupe.

"There is a market for this car," he said. "I think it's a niche fairly small but growing. I imagine the Japanese will be countering with cars in the $25,000 class soon."

Both Iacocca and Alejandro De-Tomaso, who heads Maserati, said they anticipate additional joint ventures.

JWT Ford Germany account wobbly

Ford Motor Co. in Germany is reviewing its $26 million account, and Young & Rubicam stands a good chance of taking it away from J. Walter Thompson Co., Advertising Age reports in this morning's edition.

A decision is expected by mid-February. Both JWT and Y&R will make presentations to Ford at the end of this month.

The German account is Ford's biggest on the European continent, although the U.K. account, handled by Ogilvy & Mather, is bigger.

"We looked at several agencies that had offices in Germany, but the ones of interest to us outside of our own already had car accounmts, said Douglas McClure, advertising director for Ford's worldwide marketing staff.

Ford's market share in Germany has slipped dramatically, falling from a 15-percent share in the 1970s to 12.2 percent for 1984 and to 10.7 percent by the end of last year. However, a Ford spokesman said the declining market share had nothing to do with the decision to interview other agencies.

Ogilvy & Mather may also be in danger of losing its U.K. account in the longer term, Advertising Age reports.

TV ad spending on rise for autos

By Edward Lapham
Marketing Editor

Spending for automotive advertising on television rose 21 percent in the first nine months of 1985 to more than $1.4 billion, according to the Television Bureau of Advertising.

TVB, which monitors commercial television advertising, said the automotive segment remains the second largest.

Of the three major categories measured by TVB, spot market advertising by dealer associations showed the biggest increase, up 39 percent to nearly $250 million.

Total spending by manufacturers, for both network and spot, rose 16 percent to more than $940 million in the January-September period. Spending by individual dealers in the top 75 markets rose 27 percent to $237.8 million.

In the dealer association category, Nissan dealer groups posted a 51-percent increase to $34.4 million for the first nine months of the year to rank first.

However, two new listings, multi-brand association spending at Chrysler and Ford, posted the largest gains, 182 percent and 206 percent, respectively.

Multi-brand dealer association spending at GM, largely for trucks, rose 14 percent.

Among individual dealers in the 75 largest markets, Cal Worthington's Los Angeles operation continued to be the big spender, with a 33-percent increase to $2.7 million.

Ford Motor Co. took over the top spending spot, up 8 percent to more than $149 million.

GM, which traditionally had led the pack, cut its spending 9 percent to $138.3 million in the first nine months of the year.

Nissan, which shifted much of its spending into dealer association buys, cut its corporate spending 7 percent.

AMC spending was off 8 percent.

Volvo brass embroiled in stock fray

Pehr G. Gyllenhammar

By Stig Bjorklund
Staff Correspondent

GOTHENBURG, Sweden.—Volvo's two top executives are among 30 Swedish executives embroiled in a political and media controversy over a stock market investment that netted them large gains.

The government has launched an investigation into the practice—common in this country—whereby company executives are given a chance to buy stock in a company when small stockholders are not. Involved are Volvo President Pehr G. Gyllenhammar and Managing Director Hakan Frisinger and about 30 other executives from other Swedish companies.

Three years ago, a Volvo subsidiary, Soneson, acquired a privately held medical company, Leo. When Soneson decided two years ago to issue a separate, private, stock for Leo, it offered the 30 executives shares at the same favorable price it paid for them.

Then, several months ago, the stock was listed on the exchange for the first time. Sales of the shares opened at considerably higher prices, allowing the executives gains that in some cases reached millions of dollars.

The transaction was revealed in the press the day before the traditional Volvo press conference announcing the results of the first nine months of 1985.

Reporters centered their questions more on Gyllenhammar's business ethics than on the financial results of Volvo, angering Gyllenhammar, who declared his honor was worth more to him than any private profit. He said he would sell his shares, at the original price, to the cancer research fund set up in the name of the Volvo founder, Assar Gabrielsson.

The massive press coverage that followed snowballed into a political dispute concerning the so-called pilot practice that allows executives to make such profits when small stockholders in a company cannot. In the wake of the Leo Affair, as it was called, the Soneson chairman resigned, and an executive of the bank that financed the executives' stock purchases—and who bought stock himself—was fired.

The press reported a schism between Gyllenhammar and Frisinger because Frisinger refused to abstain from his profits, which were substantially higher than Gyllenhammar's.

The affair got so hot that the Socialist prime minister announced an official investigation into what happened and how a similar situation could be avoided in the future. A three-person investigation commission was quickly set up to start its work at the beginning of this year.

Its findings are also to be sent to tax authorities. The tax question: Whether Gyllenhammar's donation of his shares will exempt him from taxes on the gain.

Attack on gray market fizzles

By Jake Kelderman
Washington Reporter

WASHINGTON.—A drive by some European makers and their congressional allies to put an end to the gray market in automobiles has apparantly ended, and the winners are the gray marketers and the consumers who buy their products.

Under compromise legislation already worked out in the Senate and in process in the House, gray marketers will continue to be able to sell their products in the U.S. if they comply with the same requirements as those placed on full-line manufacturers.

"What we've tried to do here is level the playing field," said Senator Daniel Inouye, Hawaii Democrat.

Inouye was a sponsor of legislation that would have put severe limits on gray marketers but he ran into opposition from Senator Warren Rudman, New Hampshire Republican, who saw no need for such strictures and wanted retention of an open market.

The two worked out a compromise in the waning hours of the first session of the 99th Congress that would permit gray marketers to continue if they pay gas-guzzler taxes and CAFE penalties like other makers and recall their cars when a safety defect is found.

Certain foreign car makers and their dealers had argued before Congress that it was unfair for the gray marketers to sell their product here without having to meet the same financial requirments and responsibilities as the franchised dealers. THey also argued that some of the vehicles sold were never intended for the U.S. market.

The Inouye-Rudman compromise calls for the importers and modifiers to register with the Department of Transportation and for DOT to establish requirements for record-keeping, inspection of those records, penalty assessments and the like.

Once DOT accepts a vehicle as suitable for importation, any gray marketer may import the vehicle subject to completion of the necessary modifications.

The vehicle may not be sold, however, until the importer determines fuel-economy ratings for it, labels it for any gas-guzzler taxes and certifies that it was modified in accordance with perscribed procedures and that it meets all federal safety standards.

Their proposal also calls for the gray marketers to be responsible for recalling their cars, both when they discover a safety-related defect and when the original makers find one in a vehicle similar to that imported by the gray marketer. DOT would be required to establish regulations insuring that the gray marketers get the information they need to fix the cars if the original maker recalls the cars.

It is anticipated that the compromise measure will be considered for Senate passage shortly after the members return to Washington in mid-Janaury.

The time frame for final, full congressional passage is considerably longer, since the House must still pass its version of the measure. It was learned last week, however, that a compromise very similar to that reached in the Senate will likely be signed off soon in the House Energy and Commerce Committee.

Honda plans to build 220,000 cars in U.S.

TOKYO.—Honda of America Mfg. Co. will build 220,000 units of the Accord and Civic models at its Marysville (O.) plant in 1986—an increase of 51 percent over the 145,337 Accords built there in 1985, according to Tadashi Kume, president of Honda Motor Co., Ltd.

A new line at the plant will build the Accord hatchback, beginning in April. Beginning in July, the line will also build the Civic four-door sedan. The current line then will build only Accord four-door sedans.

By early 1988, the plant will have a capacity of 360,000 cars a year—a 20-percent increase over the company's initial production target.

That will bring Honda's total yearly auto production in North America (including the plant now under construction in Canada) to 440,000 units, Kume said.

He said that Honda intends to facilitate the planned production increase by further automating painting, welding and assembly operations, at a cost of about $60 million.

Kume also forecast 1986 Honda sales in the U.S. of 650,000 units, a 17.75-percent increase over the 552,000 sold in 1985.

Kume said that Honda plans to produce 1.53 million vehicles in Japan in 1986, 12.3 percent more than in 1985. If that target is met, Honda may replace Mazda Motor Corp. as the third-largest auto producer in Japan.

1984 numbers for New York State and Oklahoma, and Oklahoma, 1985, from manufacturers' sales records.

October total up 31 pct. to 274,547

Import registrations set record

By Jenny L. King
Detroit Reporter

New imported cars claimed a healthy 28.22 percent of the total market in October, and volume was up 31.78 percent over the year-earlier total.

German-built cars increased to 13.50 percent of the month's total from 11.69 percent a year earlier, and Japanese autos dipped to 71.57 percent from 73.94 percent.

According to monthly registration reports from R.L. Polk & Co., a record 274,547 imported cars were added to the books in October compared with 208,330 in the same month of 1984. Ten makes accounted for 85.11 percent of the month's import total, down from 87.78 percent the preceding year.

Imported-car sales were up 31.78 percent, and the 274,547 registrations represented 28.22 percent of the total U.S. market, up from 24.97 percent in October, 1984.

Nissan's record sales for the month put it in first place among the imports, up from third a year earlier. Nissan gained 1.73 percentage points. Toyota slipped into second place from the top spot a year earlier and simultaneously lost 1.22 percentage points. Honda, with steady numbers in a growing market, moved down to third place from second and forfeited 4.96 percentage points.

Mazda registrations, up 34 percent in number, gave the company the necessary impetus to stay ahead of fifth-place Volkswagen and sixth-place Subaru. Both the latter companies also had an excellent October. BMW leapfrogged from 10th to seventh place, with Volvo, Mercedes-Benz and Audi completing the list in that order.

Year-to-date import registrations were up 16.45 percent in number and expanded to 26.42 percent of the total U.S. market from 24.65 percent in the first 10 months of 1984. The 1985 total was 2,433,381 compared with 2,089,640 a year earlier.

Toyota maintained its grip on first place among the major imports but only by a few units. The number-one importer had 10-month registrations of 470,463 compared with 469,671 for second-place Nissan. Toyota's share of the market was off 0.70 percentage points while Nissan was up 0.26 percentage points from its year-ago share.

Honda slipped from second to third place and gave up 1.48 percentage points from its year-earlier market share of 19.49 percent. VW moved into fourth, pushing Mazda down to fifth place. Subaru and Volvo stayed in sixth and seventh places year to year, BMW moved to eighth from 10th, pushing Mercedes and Audi into ninth and 10th places, respectively.

Ten makes captured 87.81 percent of the year-to-date import market, down from 89.62 percent in 1984.

In October, 71.57 percent of the new import registrations were of Japanese origin, down from 73.94 percent a year earlier. Cars from West Germany represented 13.50 percent compared with 11.69 percent in 1984. U.S. "imports"—that is, VW Golfs, Honda Accords and Nissan Sentras assembled in this country—claimed 8.96 percent of the market, up from 8.01 percent. The numbers were as follows:

	Oct. 1985	Oct. 1984
Japan	196,489	154,036
W. Germany	37,066	24,358
United States	24,596	16,693
Sweden	11,443	8,791
France	2,106	2,519
Britain	1,793	1,029
Italy	541	886
Yugoslavia	513	0
Ireland	0	18
TOTAL	274,547	208,330

At the end of 10 months, Japanese cars represented 70.85 percent of the new import registrations, down from 71.97 percent a year earlier. West German cars had 13.89 percent, up from 12.46 percent, and U.S. imports advanced to 8.46 percent from 8.10 percent of the market. The numbers:

	10 Mos., 1985	10 Mos., 1984
Japan	1,724,069	1,503,886
W. Germany	338,112	260,457
United States	205,806	169,274
Sweden	121,673	109,139
France	20,634	26,259
Britain	16,413	14,373
Italy	5,923	5,932
Yugoslavia	751	0
Ireland	0	320
TOTAL	2,433,381	2,089,640

Registrations of imported trucks were up 28.23 percent October to October, to 83,405 from 65,045. Numbers for the major importers were:

	Oct., 1985	Oct., 1984
Toyota	28,707	25,109
Nissan	24,270	15,364
Mazda	11,153	10,375
Isuzu	6,637	—
Dodge Ram 50	—	5,797
Others	12,638	8,400
TOTAL	83,405	65,045

Year-to-date truck registrations of 801,394 were up 30.31 percent from 614,981 in 1984. Totals were as follows:

	10 Mos., 1985	10 Mos., 1984
Toyota	306,691	239,076
Nissan	223,631	161,596
Mazda	94,571	96,758
Isuzu	62,708	—
Dodge Ram 50	—	40,320
Others	113,793	77,231
TOTAL	801,394	614,981

Toyota renews pacts with two suppliers

TORRANCE, Calif.—A commitment to quality has earned two suppliers renewed contracts with Toyota Motor Sales U.S.A.

Crossville Rubber Products, Crossville, Tenn., will supply Cargo Van floor mats and 3M's Decorative Product Division, St. Paul, will supply truck stripes. Crossville will begin its second year as a Toyota supplier, as will the 3M unit.

What's in the cards?

Six auto economists approach the '86 gaming table with "cautious optimism"

By Michelle Krebs

To those in the auto industry, a new year is like a poker game — unpredictable, full of risks, and sometimes calls for a bit of bluffing. Except in the car business, the stakes are a lot higher. For U.S. auto makers and suppliers, as they peek at the hands dealt them for 1986, no term better describes their gut feeling than "cautious optimism."

With fingers crossed, corporate economists of General Motors, Ford Motor Co., Chrysler Corp. and three auto supplier companies expect 1986 will be reasonably healthy. They see no reason to throw in their hands — for now.

"A couple years ago, I'd have said this with great trepidation," says Wynn V. Bussman, economist for TRW Inc., "but everything seems to be going well. I don't see the seeds of a downturn."

A few months ago, Bussman said 1986 would be a year of modest growth with a downturn by year-end. But now he sees nothing that would spur a downturn.

Chrysler economist Donald P. Hilty notes his "previous thinking" was that the U.S. would have good growth for three to four years, followed by a severe recession. "But perhaps the minor adjustment of 1985 was the correction in the economy, and we may avoid a recession," he says.

William Prebe, economist for Dana Corp., steals a description from Richard Nixon's almanac to describe 1985-'86: "The economy is sideways waffling."

Explains Prebe: "That means there's no clear direction of where the economy is going. There's no real pizzazz. I'm more optimistic that we'll skip the next recession."

Likewise, automotive demand will "sideways waffle," Prebe says. He predicts no dramatic drops and no skyrocketing growth. Part of his reason is that none of the signs of the last 11 economic slowdowns since World War II exists.

"The economy will continue to drift for a quarter or two, then we'll have a period of new expansion," Prebe predicts. "A new cycle will commence in 1986, which will usher in a good start for 1987."

Adrian Dillon, economist for Eaton Corp., shares Prebe's optimism: "We may be only halfway through the recovery cycle. We have to be concerned about certain things, but look at what causes a recession. None of those factors exists."

Dillon notes that U.S. inflation currently is at its lowest level since the early 1960s, interest rates are the lowest since the 1970s, capacity utilization is running about 80 percent, capital spending is booming and unemployment is holding.

"Why would we have a recession?" he shrugs. "Our problems are domestic — the federal budget deficit, the farm problem. What is the worst that could happen to those?"

Chrysler's Hilty says 1985 showed some pleasant surprises: lower than expected oil prices and interest rates, and a weaker than anticipated U.S. dollar.

He figures 1986 could hold similar surprises, such as continued weakening of the dollar and declines in oil prices.

On the other hand, some happenings may be less pleasant, such as uncertainty over tax reform which may dampen consumer buying by fostering a wait-and-see attitude and postponed purchases. The dollar, Hilty notes, could strengthen just as easily as it could weaken.

Despite the optimistic forecasts, the economists are looking over their shoulders for the economic boogeyman. They are closely eying potential trouble spots: the federal deficit; trade deficit; value of the dollar; and consumer debt.

GM appears very cautious. David C. Munro, a corporation economist, says, "So far, so good." Nonetheless, early warning signals are up: "While everything looks good," he says, "we, for a long time, have been looking at where there might be some surprise, where we should keep an eye on our left flank.

"We don't see anything dramatic. We do see a couple of potential risks," Munro adds.

The federal deficit, he notes, has the potential risk to cause financial markets to retreat from their boom of recent months. A retreat could trigger higher interest rates, which in turn could cause consumer confidence to falter.

The economists unanimously mention consumer debt as a concern. Consumer installment debt is at an all-time high, thus personal savings are at an all-time low. Economists wonder how long the trend can continue.

Prebe notes that the recent surge in the stock market has made consumers "feel wealthier," and they may feel compelled to take on debt for financing durable goods.

Even trouble spots, however, show encouraging signs, the economists say.

John Deaver, economist for Ford, is encouraged by movement on the federal budget deficit. "The recognition to do something is greater this year than last year, though we are hearing few hysterics about it," he points out. "It's like the battleship of the budget has begun to move — without the shrieks and whistle blowing."

Dana's Prebe has a "worry list," but sees a brighter side to all the items on it.

To Prebe, it appears something will be done on the federal budget deficit, which will influence the economy positively. As he sees it, there will be little improvement in the trade deficit, but it won't worsen, while inventory levels are supportive of a strong economy.

U.S. vehicle market

As economists view the U.S. market, the consensus is motor vehicle sales will run about 14.8 million units in 1986. Their estimates range from 14.6 million to 15.0 million.

The consensus indicates newcar sales will be between 10.5 million and 10.6 million units; trucks about 4.3 million units.

Chrysler's Hilty is optimistic about vehicle sales for "the next couple years." A hefty pot of pent-up demand still exists, he says, although purchases could be postponed again should the economy turn downward.

Prebe expects a modest decline early in the year, but he believes December 1986 will be stronger than December 1985.

In Dillon's view, "The question becomes, 'How many vehicles will the traditional U.S. manufacturers sell? How much will be Big Three sales?' The good news is that in 1985 the Big Three hit their highest level of production since 1978 and 1979. The bad news is this will be the high point for the decade."

TRW's Bussman agrees. While auto demand will be fairly flat, he says, imports will surge to 3.2 to 3.3 million units a year, excluding U.S.-assembled Japanese cars.

Economic growth

The consensus also shows that economic growth, measured by the Gross National Product, will run about 3.0 percent during 1986.

Hilty predicts a softer first half than second half. Deaver doesn't see why one half should be better than the other. Bussman says the GNP could be above 3 percent if the trade deficit improves, but lower if the deficit doesn't level off as expected.

Inflation

The economists agree that inflation will stay in check, running at 3.5 to 4.0 percent as measured by the Consumer Price Index. Higher import prices, because of a weaker dollar, will be responsible for any increase, they say.

Prebe, however, disagrees. He doesn't expect higher prices on imports because companies want to maintain the market share they have gained. "If they do raise prices," he says, "they might offer incentives."

Interest rates

Interest rates, according to the economists' consensus, should remain relatively flat, though some expect a downturn early in 1986 and a possible upturn later if other factors come into play.

Bussman predicts interest rates will continue a downward trend for at least the next three months. Depending on inflationary pressures, it's a 50/50 bet what they will do, he says.

Unemployment rate

The economists agree that, because of only modest economic growth, little change in the unemployment rate will occur in 1986.

Only Bussman predicts any change in the unemployment rate, but "only minimal." He says it may drop to 6.7 percent by midyear.

U.S. dollar

The U.S. dollar, weakened by close to 20 percent in recent months, is an iffy area. The economists agree it will depreciate more, though the rapid drop is over.

The economists disagree on how much more the dollar will weaken. Their estimates range from 5 to 20 percent.

They agree that the strength of the dollar against the yen, or vice versa, will continue to be a problem. The U.S. trade deficit in 1986 isn't expected to grow, but still will be $150 billion, they believe.

Hilty says that, long term, something more fundamental has to change in the Japanese economy: "We believe they've hedged the yen until mid-1986 so that, in the short run, they will actually benefit from the stronger yen. By hedging the yen, they protect themselves from losing profits from the U.S., but at the same time they can buy raw materials in yen for less than before."

For the long term, Hilty says, the Japanese will have to swallow profits or increase prices. If they increase prices, their sales volume drops, thereby providing an opportunity for U.S. car makers, he reasons.

Munro thinks the pressure will stay on Japan to absorb its surplus savings into its economy rather than to rely on exports.

Consumer confidence

Consumer confidence has dropped from record peaks — but not far, according to the economists, who expect it to remain strong.

However, they are watching consumer confidence closely for signs of faltering.

Record consumer debt is a concern. At some point, it is felt, consumers may overload and call a halt to the spending spree. But for now, that appears not to be the case. ■

Suppliers speak out on competition

Your view of the U.S. economy — and how you voice that view publicly — depends on which side of the fence you sit.

At least, that's the case with auto manufacturers and their original equipment suppliers.

Economists at GM, Ford and Chrysler, and at three supplier firms, predict a fairly healthy U.S. economy for '86. However, suppliers seem more aware of the pressure of global competition.

And — unlike auto companies — suppliers don't hesitate to declare that the domestic manufacturers' portion of new-car sales will drop throughout the decade.

"The challenge to the Eatons of the world," says Adrian Dillon, economist for Eaton Corp., "will be to adjust capacity by 1990 to two-thirds of the present level or find ways to get business from the companies building in the U.S." Eaton manufactures advanced technology products serving the vehicle components, electronics and electrical markets.

TRW Inc. economist Wynn V. Bussman agrees. "In a sense, we have seen the last of the best years," he says, noting that his company's growth will come by sharpening competitiveness and developing new products.

According to Bussman, whose company supplies high-tech products for car, truck, electronics, space systems and energy markets, "The challenge will be for us and other auto suppliers to make sales to domestic companies regardless of who owns them."

That's no easy task, he acknowledges, since Japanese auto companies that assemble cars in the U.S. are encouraging Japanese suppliers to set up shop here.

At the same time, auto supplier companies are under the gun of auto makers to boost product quality and cut prices.

"It sounds like motherhood and apple pie," says Bussman, "but we have to provide the highest quality for a low, competitive price. Unless that's done, we face losing to competition domestically and to foreign suppliers, especially the Japanese. They have their eyes on supplying this market — not only domestically assembled Japanese vehicles, but also U.S. cars."

William Prebe, economist for Dana Corp., believes that while automotive supplier sales will be as strong in 1986 as they were in 1985, profits may be stagnant because of price pressures.

"You may be able to shave prices and steal business from competitors, but that will affect profits," says Prebe, whose company produces components for the motor vehicle and industrial markets. "Profits for 1986 will be only marginally better than 1985."

Dillon acknowledges the presence of ever-increasing price pressures. The beneficial result, however, is longer-term contracts for suppliers from their automotive customers. "We can build capacity accordingly," the Eaton economist says, "and eventually get a return on cost-cutting programs."

Bussman figures there is still room for profit improvement, however: "Companies have embarked on price-cutting and cost-cutting programs. Price cuts were made quickly, with the stroke of a pen, but were followed by cost cutting." Eventually, companies should enjoy some return on those cost-cutting programs, he adds.

Supplier company economists admit it will be difficult to compete for domestic auto business unless the supplier is multinational or has a unique product.

"Off-shore sourcing will be more and more the case for those who already have facilities overseas," says Bussman. "I've been seeing a growing number of product decisions being made on where to source — that is, what country. This move will not be stopped by dollar value."

— *M.K.*

1986 ECONOMIC PREDICTIONS

	Total Motor Vehicle Sales	Passenger Car Sales	Truck Sales	U.S. Economic Growth (measured by GNP adjusted for inflation)	Inflation (measured by Consumer Price Index)	Interest Rates	Unemployment Rate	U.S. Dollar	Consumer Attitudes
David C. Munro General Motors	15.0 million	10.5 million	4.5 million	3%	3.5 to 4.25%	May decline a bit more	Flat	Additional weakening	Remain strong, but could retreat
John V. Beaver Ford Motor Co.	14.8 million	10.4 million	4.4 million	3%	5%	Flat	Flat	Continue to weaken at slower rate	Strong, but not as strong as recent past
Donald P. Hilty Chrysler Corp.	14.9 million	10.5 million	4.4 million	3%	3.4%	Slightly down	Slightly lower	10% more depreciation	Strong, but down from peaks
William F. Probe Dana Corp.	14.77 million	10.77 million	4.0 million	2.9%	3.3%	Flat	Flat	Decline another 20%	Remain strong
Adrian T. Dillon Eaton Corp.	14.6 million	10.5 million	4.1 million	3 to 3.5%	3.9%	Slightly lower	7.1% flat	Decline slightly, 5%	Strong; near present levels
Wynn V. Swanson TRW	14.9 million	10.6 million	4.3 million	3%	4.25%	Slight drop early in the year	Flat	Flat; possibility of a slight drop	Continue downward drift

The Doomsayers

ANWO paints a bleak portrait of the auto industry in the U.S. and Western Europe for 1986

By Michelle Krebs

The best of years are over for U.S. auto makers, supplier companies and UAW members, according to *Automotive News* World Outlook (ANWO).

This year will set the stage for the rest of the decade, according to the quarterly service of *Automotive News* and Data Resources Inc. (DRI).

In setting a somber scenario, ANWO predicts the fiber of domestic auto manufacturing and supplier companies will be transformed and jobs for U.S. workers will be reduced by the pressures of global competition and offshore sourcing of cars and components.

While 1986 will be a good year for the U.S. auto industry, it will not be a banner year. New-car sales in the U.S. will approximate 10.5 million units, according to ANWO.

Worldwide car sales will hit nearly 31.8 million units in 1986 — better than 1985's 31.3 million but still behind 1978's peak of 32.0 million.

The U.S. car market import share, mainly Japanese, will continue to rise, and import volume is likely to surpass 3.0 million units in 1986, according to ANWO.

North American car production in 1986 will drop by nearly 1.3 million units, from 9.2 million in 1985 to just short of 8.0 million.

Japanese auto makers will boost production in Japan by a half-million units this year, ANWO forecasts. Because new-car sales in Japan will be virtually flat this year, that nation's producers likely will look to North America for sales to absorb their increased plant capacity.

In auto company profitability, 1986 will be similar to 1983 — but without the tax credits enjoyed by U.S. makers, ANWO predicts. General Motors, Ford Motor Co., Chrysler Corp. and American Motors Corp. earned a combined $6.2 billion in 1983, but profits were helped by tax credits earned in previous years when the companies lost money.

"If you take out the tax breaks, you wouldn't have had a banner year (in 1983), but rather a year like 1986 will be," says John Hammond, DRI's U.S.-based economist.

Besides auguring sales and profit trends, 1986 will provide other glimpses into U.S. auto industry happenings during the rest of this decade. Hammond calls 1986 "a staging year for a dramatic trend that will be firmly entrenched by 1990."

Japanese companies have been gradually establishing manufacturing sites in the U.S. "Now they have broken into a sprint," says Hammond, who estimates Japanese auto production on U.S. soil will reach 1.4 million units of capacity by the 1990s.

In defense, U.S. manufacturers, while trying to hold their ground in the U.S., have rushed to Japan, Korea and Brazil, doubling their outsourcing efforts, Hammond notes.

That trend means fewer UAW jobs as the content of cars assembled in the U.S. becomes increasingly foreign sourced.

Japanese assembly plants in the U.S. are not apt to take up the job slack, according to ANWO. To keep their profits high, Japanese companies will continue to source as heavily as possible in Japan. At the same time, they have encouraged suppliers from Japan to locate in the U.S.

As domestic car manufacturers find they are at a competitive disadvantage in the U.S., they will cut operating capacity to as low as 65 percent. Says Hammond: "That means entire plants will be shut down."

These problems are compounded by strong inroads being made in the U.S. by European vehicle importers who continue to add to the range and number of their models, and by entry-level newcomers to the U.S., such as Hyundai (Korea) and Yugo (Yugoslavia).

DRI predicts "non-traditional supply sources" will provide up to 2 million more cars to U.S. customers, equal to 20 percent of the market, in years ahead.

A likely scenario for the 1990s depicts a U.S. market with overcapacity, collapsing prices and financial difficulties among U.S. manufacturers — a situation similar to Western Europe's in recent years.

This also is bad news for traditional domestic auto suppliers that are not multinational companies with sourcing in foreign countries.

"Overall, the business for traditional domestic auto suppliers will shrink dramatically. There will be a different complexion to the auto supplier," says Hammond.

Another trend that will be firmly in place by 1990 is increased diversification by GM, Ford and Chrysler. "The traditional domestic automobile manufacturers will devote a lower proportion of their business to auto production. They will continue to make acquisitions and increase the size of their non-automotive business," Hammond says.

In the past year, GM, Ford and Chrysler have made a number of acquisitions in financial services, computer services, defense and aerospace areas.

Domestic manufacturers, Hammond notes, may be able to maintain financial health because of this diversification.

By 1990 the three biggest U.S. auto makers will have virtually given up small-car production in the U.S., except for special projects such as GM's Saturn, Ford's Alpha and Chrysler's Liberty programs.

GM will increase small-car imports from Isuzu and Suzuki in Japan, and Daewoo in Korea, and will continue to take the bulk of car production from NUMMI, its U.S.-based joint venture with Toyota, according to ANWO.

Ford will give up its small-car production to Mazda, its Japanese partner, and Kia, its Korean partner. Chrysler appears to be considering turning over its small-car production to its Japanese ally, Mitsubishi.

The three major U.S. auto firms, instead, will concentrate on marketing and distribution. "The fiber of the companies will be quite different," says Hammond.

Trends into 1990 in Western Europe are less clear than in North America.

Western European auto makers have been in a deadlock for market share through the early 1980s. Collectively, they have lost money the past five years. Only the prestige, luxury-car makers that have done well in the U.S. have made money — record amounts of it.

The trend of the 1980s now appears to be taking a turn. John Lawson, DRI's London-based economist, expects Western European companies collectively will lose money again in 1986, mainly because of Renault's massive losses. But he sees collective losses being cut.

Europe's 1986 new-car market should be somewhat stronger than 1985's. Sales should increase to nearly 10.6 million units from 1985's 10.3 million. Companies also should be able to increase prices slightly.

However, overcapacity will remain a problem, Lawson notes, and job cuts will continue.

How the Japanese proceed in Western Europe, where protectionist laws run the gamut, remains to be seen. It is clear the Japanese want to move more deeply into the world's "other large car market," but how they plan to do so is not clear.

"The U.S. was the first stop for the Japanese on the train toward globalization," observes Lawson. "Western Europe is the next stop on the ride. There are only two places in the world where the industry sells 10 to 11 million units a year — the U.S. and Western Europe. If you want to grow globally, you have to look at those markets."

Among the Japanese, only Nissan, so far, has firm plans to build an independent plant in Europe — a car factory in the United Kingdom with annual capacity of 250,000 units.

Lawson speculates that the Japanese might invade Europe in a different way than they did the U.S. Instead of taking risks with 200,000 to 300,000 annual-capacity plants, he says, they may pursue cooperative or joint ventures with European manufacturers. ■

Europe hangs on

But slow market growth, sales gains by the Japanese, overcapacity and low per-unit profit do not bode well for Europe's mass producers

By Richard Feast

A forecast by the Organization for Economic Cooperation and Development (OECD) indicates European economic growth will remain stable in 1986 at 2.25 percent. Unemployment will stay high at 11 percent (compared with 7.25 percent in the U.S. and 2.75 percent in Japan). But inflation will drop to 6.25 percent from 7.25 percent in 1985.

Against this background, a small rise in European new-car demand is anticipated in 1986. The main impetus will come from West Germany, following a period of market doldrums inspired by new auto-emission regulations, and from France, where consumer confidence is returning.

Market forecaster DRI Europe believes 1986 new-car sales in Europe will improve by 3.3 percent to 10.59 million units. DRI says the market will continue to grow, but only by an average of 1.8 percent a year, until European car buying reaches an annual volume of 11.3 million by the turn of the decade.

Relative stability in Europe's auto industry will last for at least the next year, but fundamental flaws in its structure will lead to substantial changes beyond then, according to John Wormald, principal at Booz-Allen & Hamilton's London bureau. He sees stratification into a two-level European industry comprised of successful specialists with a strong hold on the world's prestige-car markets, and volume producers that will be forced into greater flexibility and collaboration, including ventures with Japanese suppliers.

A combination of slow market growth, continued sales gains by Japanese importers, overcapacity and low profit per-unit depict an unattractive prospect for Europe's mass producers.

Pressure for greater profits will be a higher priority than snatching a small increase in market share. General Motors, for instance, spent $3 billion to increase production capacity in Europe, but the investment is now being questioned at the highest level of the corporation because all it bought was an extra 3 percent market share and lower profits.

According to OECD, a Paris-based organization representing a group of industrially developed countries, West German growth will be 3.25 percent this year compared with 2.25 percent in 1985. Consumer prices will fall one point to 1.25 percent, lowest in Western Europe. West Germany's trade balance is forecast to leap by one-third to $40 billion this year.

Consumer prices are expected to continue to fall in France, from 5.75 percent last year to 3.75 percent in 1986. The trend will continue into 1987, taking the country's inflation to its lowest level in many years. Economic growth will double to 2 percent and unemployment will go up fractionally to 10.75 percent.

By contrast, unemployment in the United Kingdom may ease to 11.5 percent. U.K. prices in 1986 will be down to 4 from 5 percent, but growth will be cut from 3.25 to 2.25 percent. In Italy, growth (2.5 percent) and unemployment (10.5 percent) will be up, but consumer prices are expected to fall from 9.25 percent last year to 6.75 percent in 1986.

Between them, those four economies are responsible for three-quarters of all new-car sales in Europe.

This year's overall auto-market improvement in Europe will stem from West Germany's sales increase of nearly 11 percent to more than 2.54 million units, and an upswing in France's car buying — slated to go up more than 5 percent to 1.9 million units. Italy and the U.K. will sustain some contraction from their high levels of recent years.

Overall, DRI expects the Volkswagen group to maintain sales leadership on the continent, mainly because of the West German recovery. But competition is becoming more intense with recent launches of GM's Opel Kadett sedan and Peugeot's 309 aimed at VW's core business, the Golf and Jetta.

Volkswagen's ascendancy has been accompanied by a solid return to profitability, much of it stemming from vehicle exports to the U.S. That is something few of Europe's high-volume producers are taking full advantage of, despite examples set by lesser-volume, upper-scale manufacturers Daimler-Benz, Volvo and Saab.

Fiat Auto professes no interest in the U.S. market. Peugeot and Ford Europe ship only handfuls of cars to the U.S.; GM's Adam Opel subsidiary may follow suit before long. On the other hand, Renault plans to become a substantial mid-line exporter to the U.S. with a European-made R21 sold through American Motors dealers.

Of all these companies, only VW and Fiat are firmly in the black. Fiat's health stems mainly from selling small cars, which supposedly are unprofitable; this is a tribute to Fiat's reorganization in the late 1970s and early '80s. (Help also came from an understanding Italian government that paid most of the wages of those laid off in Fiat's efficiency drive.)

Peugeot group in 1985 may break even after long periods of losses, but Ford and GM operations are not providing the required return on investment. Renault's 1985 loss will equal its 1984 record deficit.

The key to company viability in Europe seems to be shipping lucrative vehicles to the U.S., given the limitations of European domestic market development and the fact that Japanese rivals have cleaned up in all other parts of the world.

Smaller companies in the volume business — Austin Rover in the U.K., Alfa Romeo in Italy and Seat in Spain — can find security only through alliances with other companies. If that collaboration is with a Japanese company, as it is with Austin Rover, then existing problems of European auto makers and component suppliers will be heightened.

As Japan's auto makers become established in the U.S., protectionist sentiment in the U.S. could transfer to successful European exporters and less-developed nations such as South Korea and Yugoslavia. Any company that sells 100,000 units annually in the U.S. will have to be careful to avoid protectionist measures.

No matter how solid a company is in Europe, by and large it is the U.S. economy that is providing its wealth and health. U.S. import-car demand plays a vital role in sheet-steel production in Sweden, tire output in West Germany and glass manufacturing in France. There is no mistake that the economies of those countries are pulled along by the American express. ■

Protectionist sentiment in the U.S. toward Japan could transfer to less-developed nations (such as Yugoslavia, above) if auto companies there become too bold with their exports.

Could a tax cut reduce Europe's overcapacity?

Demand for an additional 1.0 to 1.6 million cars by 1990 could be created in Europe if governments make even modest tax cuts, contends auto industry analyst Prof. Krish Bhaskar.

This would help lead Europe's industry out of its present overcapacity crisis, he maintains in a report compiled by the Motor Industry Research Unit (MIRU) at the University of East Anglia in England.

The thrust of the report is that the problems of slack markets, poor profits and plant closures could be turned around by stimulating demand to support existing jobs and capacity.

"Extensive research into the relationship between car demand and factors such as GNP, income, purchase costs and running costs suggests that governments can act to stimulate demand by reducing car taxes on purchase and usage, and by macroeconomic measures to encourage national growth," Bhaskar says.

Auto production overcapacity in Europe is generally estimated at 2.5 million units, though some companies — Volkswagen among them — believe spare capacity has to be maintained in order to be flexible enough to meet future growth. The VW view is that current retail prices are not high enough to finance spare capacity.

Bhaskar's report, entitled *Demand Growth: A Boost for Employment?*, concludes that tax actions are not only feasible, but will actually cover their financial costs, in many cases, through reduced unemployment costs, higher unit sales and increased consumer spending power.

MIRU estimates that, allowing for improved productivity and fuller use of the current labor force, between 409,000 and 897,000 European jobs could be created by 1990.

"This is a realistic picture — not an exaggeration — of the potential growth available to the industry if governments make a commitment to enhance the viability of the automotive sector," says Bhaskar.

The study, which makes extensive use of MIRU's computer modeling to track automobile demand and ownership, traces the factors that led to the present condition. It examines reasons for the slowdown in all but the specialized segments of the market, and suggests moves governments could undertake.

High Attitude

Consumer sentiment soars to its highest high since the '60s

As the 1986 model year got under way, thoughts of shiny new cars danced in the heads of many Americans. The University of Michigan's latest Survey of Consumer Sentiment shows favorable attitudes toward car buying persisted during the third quarter of 1985.

The pro-buying public, according to the survey, was stimulated by increased availability of reduced interest rates on vehicle loans, mentioned by 38 percent of those interviewed.

Auto makers offered 7.7- and 7.5-percent financing during the third quarter, following a strike by car haulers. After the strike was settled, car dealers were left with hefty inventories of 1985 models as the arrival of 1986 models accelerated.

The survey points out that the record-setting response to incentive financing underscores the importance consumers now place on interest rates in purchase-timing decisions.

Overall, consumer sentiment, though still high, exhibited a declining trend. While the level was down from a year earlier, however, it was the 10th consecutive quarter in which the survey's index figure was in the 90s — the longest and highest sustained period of consumer optimism recorded since the 1960s.

The small overall decline recorded during the past year was not shared equally by the several measures of attitudes and expectations. Consumers' views of their current financial situations and buying conditions remained at very favorable levels. However, prospects for the domestic economy during the year ahead declined significantly.

During the past two years, there has been a sharp decline in the proportion of consumers expecting continued improvement in the economy. However, a corresponding rise in unfavorable expectation did not occur.

Most of the shift in opinion during the past two years has been toward the expectation that performance of the national economy would remain unchanged during the year ahead.

Because slower growth — but no recession — is expected, consumers view the economic outlook in somewhat dulled but, nonetheless, favorable terms, according to the survey. Consumers' views suggest economic conditions will be somewhat worse this year, but will still be good, on balance.

The major factor underlying the maintenance of favorable assessments of the economy has been sustained declines in inflation. Inflation expectations are about one-third of their 1980 peak.

The primary concern expressed by consumers about the outlook for continued slow economic growth involves limited job prospects. The proportion of families expecting the national unemployment rate to decline during the year fell. Half said they expected increases. The majority expected only small changes in the unemployment rate or no change at all in the year ahead.

Confidence in government economic policies to control inflation and unemployment remained near high levels. Apparently, sustained declines in inflation have offset the rising concern with unemployment. Nonetheless, consumers continue to view unemployment, rather than inflation, as the more serious problem facing the nation.

Interest rate expectations have remained unchanged, since the start of 1985, at improved levels compared with mid-'84. The majority of those surveyed said they expect interest rates to remain at their current level or to decline during 1986.

The financial situation of the American family remains favorable, although the pace of financial improvement has slowed since the start of 1985. Even after the small decline, however, evaluations of personal financial progress remained more favorable the past two years than at any other time during the past decade.

The major reason for the improvement has been sustained declines in inflation. Rising prices eroding the living standard were mentioned by less than one-third of the peak level recorded five years earlier.

Income increases have been reported more frequently and reported income declines have fallen since the start of 1983. Twice as many families reported income increases as reported declines.

Asked about financial prospects in 1986, most continued to have a positive outlook.

The continuation of favorable personal financial prospects, coupled with declines in interest rates, has maintained consumer willingness to use accumulated savings and to incur new debt in order to make major purchases. Willingness to incur new debt was reported by the highest level of respondents during the past five years.

Favorable attitudes toward buying conditions reached record levels during 1985 for each major type of discretionary purchase — homes, vehicles and large household durables.

It was in spring 1983 that buying attitudes first reached record favorable levels. Following small declines during 1983, attitudes toward buying conditions rebounded to peak levels by spring 1984. Small declines were again recorded in the second half of 1984, only to rebound once more to peak levels in 1985.

The major reason for this pattern of surges, followed by declines, has been changes in availability of discounted prices and reduced interest rates.

In the 1970s, buying decisions were based on inflation — purchases were made in advance of escalating inflation rates.

Today, few consumers cite the advantage of buying in advance of rising prices. Instead they cite the appeal of price discounts.

Rather than inflation, higher and more variable interest rates now represent the primary source of uncertainty about future buying conditions. Consumers have come to view the interest rate trend as the most important factor in timing their purchases.

As a result, price availability and interest rate discounts have become the expected norm.

In addition to positive car-buying attitudes, consumers showed record favorable attitudes toward buying homes — because they perceive good prices.

During the past two years, favorable references to current home prices outnumbered unfavorable references, a trend not seen since the 1960s. In addition, consumers believe mortgage rates are favorable now.

Likewise, consumers indicated favorable attitudes toward buying large household durables because they perceive good prices. ■

Inflation, unemployment will remain steady, says U of M

The U.S. auto market will show solid but not record strength over the next two years with sales of 10.0 million cars in the 1986 model year and almost 10.2 million in the 1987 model year, according to University of Michigan economists.

Saul H. Hymans and Joan P. Crary say their forecast shows the U.S. economy will "emerge from the doldrums on a mildly accelerating track" over the next year or so with unemployment and inflation remaining relatively steady.

They predict 1985's 2.4-percent rise in Gross National Product will be followed by a 2.9-percent increase in 1986. Growth will peak at about 3.8 percent in early 1987, they say, then back off the rest of the year.

The forecast assumes there will be no change in the federal budget deficit situation.

Under the status quo scenario, the nation's unemployment rate will remain in the 7- to 7.3-percent range the next two years with the lower figure achieved in the second year of the forecast.

The average unemployment rate in 1986 will be 7.3 percent, virtually the same as 1985. It will edge downward to just under 7.2 percent in 1987.

Inflation over the next two years will remain moderate although trending upward, they say, because import prices will increase because of the declining value of the dollar.

As measured by the Consumer Price Index, inflation will be 3.9 percent higher in 1986 than in 1985, and another 4.6 percent higher in 1987.

Industrial price pressures emanating from unit labor cost and crude material prices will be moderate in 1986 and 1987. Import price inflation appears to constitute the major anticipated inflationary factor of the next two years.

The economists predict real net exports will rise by this spring. Exports will post an average real increase in excess of $2 billion per quarter over the following year and a half.

"In current dollar terms," says Hymans, "the trade balance is expected to continue to deteriorate until the spring of 1987 when the trade deficit peaks at an annual rate of nearly $150 billion."

The University of Michigan economists see an active housing market because of fairly stable employment, output growth in the 3.0- to 3.5-percent range and favorable credit conditions.

Private housing starts, basically flat at 1.74 million units in 1985, will increase to 1.84 million units in 1986 and 1.95 million in 1987.

Sales of existing single-family homes will increase from an estimated 3.2 million units in 1985 to 3.4 million in 1986 and just over 3.5 million in 1987.

Capital expenditures slowed during 1985 and dipped in the third quarter of 1985, the economists note. However, they say strengthening domestic product in 1986 and 1987, along with favorable interest rates and growing profits, should result in 4.3 percent and 6.3 percent increases in real business fixed-investment for 1986 and 1987, respectively.

The federal budget deficit in dollars, annual rate and as percent of GNP will drop, but not enough. "Between the closing quarters of fiscal 1985 and fiscal 1987," Hymans says, "we show the federal deficit declining from nearly $200 billion annually to just over $150 billion, and from 5.0 to 3.4 percent of GNP."

The Reagan administration, the economists contend, "remains the core of an ever-more exclusive club which refuses to recognize the long-term danger of a federal budget sufficiently unbalanced that the growth of interest payments makes it increasingly more difficult to get control of the budget deficit."

The forecast is based on the Michigan Quarterly Econometric Model of the U.S. Economy from U of M's Research Seminar in Quantitative Economics. ■

But spending will slow in '86, survey indicates

Consumer attitudes seen favorable

By Louise Kertesz
Detroit Reporter

Consumers' outlook for slow but sustained growth, given the economic turbulence of past years, has supported the view that good times financially will continue in the country as a whole, according to a third-quarter 1985 survey by the University of Michigan's Institute for Social Research (ISR).

Although consumers expect slow economic growth during the year ahead, they expect it to be accompanied by low rates of inflation and to lead to only small increases in the unemployment rate, the report said.

ISR found that respondents considered the third quarter of this year a favorable time to buy new cars. The buying attitudes remained at the alltime record level of the second quarter.

Lower interest rates and favorable perceptions of market prices during the third quarter kept buying attitudes at record favorable levels, ISR said.

Sixty-seven percent of the families surveyed felt that it was a good time to buy cars, the report said. Their attitude was borne out by the new-car sales records set in the August-September period.

But, according to ISR, recent trends in consumer attitudes and expectations have exhibited many of the characteristics of the later stages of expansion.

Since the upward momentum in consumer sentiment has now been exhausted, ISR said, prospects for consumer demand in 1986 are diminished though still favorable.

Increases in consumer spending are not likely to outpace growth in incomes, indicating that the rate of saving will rise. But the decline in new-car sales rates, while small on an annual basis, is not likely to follow an even pace, ISR said.

The response of consumers to the recent interest rate reductions has demonstrated not only their willingness to spend, but also their resolve to wait for discounts on prices and interest rates. Gone are the days when consumers felt pressured to act by ever-escalating prices, the report said.

Today, consumers are more willing to engage in comparative price shopping and expect to be enticed by discounts on prices as well as interest rates. Rather than the consumer scrambling to keep up with price increases, sellers now must scramble to keep up with the more demanding consumer, according to ISR.

The pace of real income growth during the year ahead will play a pivotal role in buying attitudes, the report said.

Of course, declines in spending would be greater if there were a substantial resurgence in inflation, interest rates or unemployment, ISR said.

But given the outlook for those variables, such a sharp retrenchment in spending is unlikely, according to the ISR report.

Ford Parts and Service approves ADP system

PORTLAND, Ore.—Ford Parts and Service Division has approved ADP Dealer Services' Ford Parts Mangement System, which is designed to reduce idle capital.

The software application prepares a series of special reports to supply raw dealership data to an independent consulting firm, which analyzes the data and returns the results to the dealership.

Washington show to put emphasis on young drivers

WASHINGTON.—The Washington International Auto Show will put added emphasis this year on cars that appeal to the young motorist.

The show will be held Jan. 15-20 at the Convention Center.

Show producers said the exhibit will make its best pitch to such young people as the student who soon will be driving his or her first car and the young professional who soon will be buying a model that exemplifies success. They noted that 32 million of the 154 million licensed drivers in this country are under 25 years of age, representing more than 21 percent of all motorists.

The Automotive Trade Assn. National Capital Area, the show sponsor, said that show participants from manufacturers to dealers are making an effort to promote safety among young drivers.

Boyle & Lane Cadillac wins service award

PITTSBURGH.—Boyle & Lane Cadillac has received Cadillac's National Service Excellence Award for 1985, one of only two dealerships in its zone to earn the honor.

Cadillac cited the dealership's "high level of technical training and participation in Cadillac's Craftsman League" in presenting the award.

Fanuc, General Electric may enter joint venture

TOKYO.—Fanuc, Ltd., builder of computer numerically controlled equipment, and General Electric Co. reportedly have reached an agreement on joint development and exchange of technologies in the area of factory automation.

According to Nihon Keizai, a local business journal, details of the pact, which will cover laser processing systems and other advanced technologies, will be worked out by the end of March and will likely develop into a joint venture by the two firms.

GMAC issues $524 million in loan-backed bonds

NEW YORK.—General Motors Acceptance Corp. has issued $524 million worth of bonds backed by automobile loan receivables.

First Boston Corp. handled the offering, which exceeds the amount of all previous bonds backed by automobile and lease receivables. It marks the first such financing by a U.S. automobile finance company.

The bonds have a final maturity of five years and an estimated average life of slightly less than two years. Interest and principal from the pool of automobile loan receivables will be passed through monthly to investors.

GMAC guarantees up to 5 percent of the loan pool against loss, a proportion far in excess of the one-half of one percent loan default rate in recent years.

The move had been expected for some time. GMAC officials said they were issuing the bonds to tap a new source for automobile financing and to attract investors.

Scott, ex-Ford official, named to BCAG post

BLOOMFIELD HILLS, Mich.—Robert W. Scott has been appointed vice president, general counsel and secretary of British Car Auction Group, Inc.

Scott retired from Ford Motor Co. Nov. 1 after 39 years with the company. He had served as assistant general counsel and had been chairman of the Ford Dealer Policy Board since 1979.

Wild year 1985 breaks

By Jenny L. King
Detroit Reporter

1985: A year of incentives, a year of record-setting imported-car sales, a year of staggered new-car introductions, a year of record truck sales, a year of front-wheel drive and four-wheel drive, a year of extraordinary competition in the marketplace.

Total car-truck sales reached a staggering 15,723,116, up 8.55 percent from 14,484,168 in 1984 and erasing the previous record of 15,407,105 set in 1978.

Record truck sales included increasing numbers of light trucks doubling as passenger cars. The truck total was 4,680,458, up 14.39 percent from 4,092,803 in 1984. The former record was 4,-103,196 in 1978.

Total new-car sales pushed over the 11 million mark for the first time since 1978 and were the fourth highest ever. Domestics topped their 1984 number by a quarter of a million units.

Import sales, on the strength of eight consecutive months of record totals, hit a new high in 1985 and gained more than two percentage points in share of the U.S. market.

Car sales in the 1985 calendar year numbered 11,042,658, up 6.27 percent from 10,391,365 in 1984. It was the highest total since 11,308,498 in 1978.. The record is 11,446,589 in 1973.

The 1985 grand total included 8,204,542 domestics, up 3.18 percent from 7,951,517, and 2,838,-116 imports, up 16.32 percent from 2,439,848.

Domestic sales, characterized by sluggish months punctuated by incentive-induced records, were the best in six years. But their 3.18-percent growth was only a shadow of the 17.01-percent gain made in 1984.

Imports included record sales for several Japanese and European makes. Japanese imports passed the two-million mark for the first time (reaching 2,217,860) and accounted for 78.15 percent of the import total.

Domestics, now seven companies strong, included sales increases for all except American Motors.

The biggest gained the least: General Motors reported domestic sales of 4,607,458, up 0.43 percent from 4,587,508 in 1984.

Ford Motor Co. sales were up 4.60 percent, to 2,070,392 from 1,-979,317. Chrysler had the best showing of the Big Three with a 15.50-percent increase, breaking through the one-million-units barrier to 1,139,936 domestic sales from 986,998 in 1984.

AMC slipped from fourth place to fifth with a 35.11-percent sales drop, to 123,449 from 190,255. Honda, up 5.01 percent, to 145,-976 from 133,601, became the number four domestic auto maker in terms of sales.

Volkswagen finished the year with sales of 77,976 U.S.-built Golfs, up 5.01 percent from 73,-838 in 1984. Nissan dealers last year retailed 39,794 U.S.-built Sentras.

The 1985 domestic market included GM with 56.16 percent, Ford at 25.23 percent, Chrysler at 13.89 percent, Honda at 1.78 percent, AMC at 1.50 percent, VW at 0.95 percent and Nissan at 0.49 percent.

The breakdown a year earlier was GM at 57.70 percent, Ford at 24.89 percent, Chrysler at 12.41 percent, Honda at 1.68 percent, AMC at 2.39 percent and VW at 0.93 percent.

Oldsmobile, the only domestic make of long standing to report

†—Estimate

record

record sales in 1985, was up 0.95 percent, to 1,066,122 from its previous best of 1,056,053 set in 1984.

Pontiac had GM's largest gain, up 13.07 percent to 796,795 from 704,684. Chevrolet was up 2.24 percent, Cadillac dropped 6.64 percent and Buick was down 10.20 percent.

At Chrysler Corp., Dodge was up 17.62 percent for the year, Chrysler was up 14.42 percent and Plymouth was up 14.00 percent. Ford was up 6.58 percent, Mercury was off 1.54 percent and Lincoln was up 9.02 percent.

Fourth-quarter domestic sales were down 9.66 percent, to 1,672,-207 from 1,850,927.

The 1985 import romp included 14 calendar-year records: Audi, BMW, Honda, Isuzu, Jaguar, Mazda, Mercedes-Benz, Mitsubishi, Nissan, Porsche, Saab, Subaru, Toyota and Volvo.

Imports climbed to 25.70 percent of the total market from 23.48 percent in 1984. They claimed 31.45 percent of December's total, second only to December, 1981, when penetration reached 31.61 percent. Sales were up 28.58 percent, to a record 256,-016 from 199,111.

Combined import-domestic new-car sales in December were up 7.14 percent, to 814,019 from 759,783.

Domestic sales in December were off 4.76 percent, to 558,003 from 560,672 in 1984. The total included a substantial increase for VW—up 55.13 percent—and a 1.07-percent gain for Chrysler.

The competition was down. Ford dropped 3.17 percent, to 145,349 from 150,110. GM dipped to 310,662 from 314,186. AMC was down 26.12 percent, Honda slipped 3.47 percent and Nissan reported sales of 5,753 new Sentras.

GM's share of the month's domestic market slipped to 55.67 percent from 56.04 percent. Ford was down to 26.05 percent from 26.77 percent. Chrysler moved to 13.26 percent from 13.06 percent. AMC had 1.36 percent, down from 1.83 percent. VW earned 1.05 percent, up from 0.67 percent a year earlier. Honda had 1.58 percent compared with 1.63 percent, and Nissan finished with the remaining 1.03 percent.

Low-interest-rate incentive programs put in place during the Christmas holidays boosted Dec. 21-31 sales 28.67 percent, to 231,-593 from 179,993 in 1984. It was the first increase for a 10-day period since the beginning of the 1986 model year.

GM held 52.05 percent of the market, Ford had 29.16 percent, Chrysler had 13.45 percent, AMC had 1.79 percent, VW had 1.16 percent, Honda had 1.32 percent and Nissan had 1.07 percent.

GM Wentzville plant making 2 car types

WENTZVILLE, Mo.— The General Motors' Wentzville plant is now assembling the H-body Oldsmobile 88 and the C-body Buick Park Avenue.

This marks the first time the Wentzville plant will produce two different types of cars. The Buick City in Flint plant will continue producing the H-body car, and the Oldsmobile Ninety-Eight Regency has been moved to Orion Township.

First week of 1986 brings 172,452 cars

By Kathy Boyer
Detroit Reporter

Domestic auto makers estimated output of 172,452 units last week, the first full week of production after the holidays.

The scheduled output for last week was 172.14 percent more than the previous week's 63,368 but was down 6.73 percent from the year-ago week's 184,901.

So far this year, 235,820 cars have been assembled, 20.35 percent below the 296,079 completed last year at this point.

Companies shared last week's estimated output as follows: General Motors, 56.39 percent; Ford Motor Co., 19.58 percent; Chrysler Corp., 18.35 percent; Honda of America Mfg. Co., 2.17 percent; Volkswagen of America, 1.36 percent; New United Motor Mfg. Co., U.S.A., 1.10 percent, and Nissan Motor Mfg. Co., 1.05 percent.

American Motors' Kenosha plant remained closed last week for inventory adjustment. Production is expected to resume today (Jan. 13).

Saturday (Jan. 11) overtime was scheduled at GM's Oklahoma City plant.

Ford's plant in Kansas City was also slated for Saturday overtime.

Ford's Edison (N.J.) plant is scheduled for overtime next Saturday (Jan. 18)

Chrysler scheduled Saturday (Jan. 11) overtime at Belvidere, Ill.; St. Louis No. 2, and Jefferson (Detroit).

Chrysler has daily overtime this week at Belvidere; Newark, Del., and St. Louis No. 2.

GM's Wilmington (Del.) plant, which assembles standard-sized Chevrolets and Oldsmobiles, will lay off 4,100 workers starting Feb. 7 to re-tool for a smaller, front-wheel-drive Chevrolet line. The workers will be idle for about seven months.

GM's Bowling Green (Ky.) plant, which assembles the Chevrolet Corvette, has been down since Jan. 6 for conversion to build the Corvette convertible. The plant is expected to resume production of the Corvette coupe Feb. 3.

Truck output tops 1985

Domestic truck makers targeted output of 70,456 units last week, the first full work week after the holidays. The total was 2½ times the previous week's 27,165.

Last week's scheduled build was 7.33 percent more than the year-ago week's 65,647.

So far this year, 97,621 trucks have been assembled, 3.32 percent below the 100,974 completed last year at this point.

Nissan's Smyrna (Tenn.) plant was closed last week for retooling. Production is scheduled to resume today (Jan. 13).

Ford's Kansas City and Twin Cities plants were slated for overtime Saturday (Jan. 11).

Chrysler's Warren (Mich.) plant remains closed for model changeover. It is scheduled to resume production in mid-March.

Canadian cars decline

Canadian auto makers' estimated production of 19,030 cars last week more than tripled the previous week's 6,175—which included the holiday—but was down 17.50 percent from the year-ago week's 23,068.

So far this year, 25,205 units have been assembled, 19.79 percent below the 31,423 completed last year at this point.

American Motors' Brampton (Ont.) plant was closed for inventory adjustment the week ended Jan. 4. Production resumed last Monday (Jan. 6).

Truck makers scheduled assembly of 18,802 units last week, 145.30 percent more than the holiday week's 7,665, and up 1.21 percent from the year-ago week's 18,-578.

Year-to-date, 26,467 trucks have been built, 13.13 percent below the 30,467 completed last year at this point.

Reagan OK's changes in trust laws

By Helen Kahn
Washington Bureau Chief

WASHINGTON.—Major changes in antitrust policy have been blessed by President Reagan.

Although not yet draped with legislative language and submitted to Capitol Hill, the cnanges apparently reflect last summer's initiative by Commerce Secretary Malcolm Baldrige and supported by the Justice Department.

A major change would provide five years of protection from antitrust enforcement for industries impacted by foreign competition. Obviously, this applies even to the highly concentrated auto industry.

The proposed exemption for industries injured by imports could be an alternative to relief under the 1974 trade law.

Other Reagan-endorsed proposals would allow more corporate directors to serve on boards of competing firms, ease restrictions on merger activities even more than the Administration merger guidelines have done already, severely restrict private collection of treble damages and limit American companies in their ability to sue foreign competitors.

Presidential Spokesman Larry Speakes said the the package would help U.S. companies heavily affected by foreign competition by allowing more freedom to merge and thus compete internationally.

Attorney General Edwin Meese called the program one to "bring the antitrust laws into conformity with modern times" and to make U.S. laws more "compatible with the global market."

Reception in the Senate is deemed generally sympathetic.

After all, one of the first actions taken in 1981 by Senator Strom Thurmond, South Carolina Republican and chairman of the Senate Judiciary Committee, was

Late News

No UAW for EDS

UAW attorneys have told the National Labor Relations Board the union wants to withdraw six petitions seeking to represent employes of the General Motors subsidiary Electronic Data Services. Related petitions were dismissed by the NLRB last November due to changes in the composition of the workforce. The UAW sought to represent about 700 of the 7,000 former GM data processing employes who were transferred to EDS a year ago.

Jim Dunne/Popular Mechanics

Dueling domestics

In the 1988 model year, General Motors will introduce the GM10 cars, including the Pontiac Grand Prix, above. It will be competing directly with the Ford Taurus, below, and Mercury Sable for the upper middle domestic-car market. Ford introduced Taurus and Sable at the beginning of 1986 with big sales plans for the models. GM, on the other hand, is scaling back on its initial output plans for the 10-cars. A station wagon version has been dropped.

Ford recall covers 42,000 Aerostars

By Richard Johnson
Detroit Reporter

Ford Motor Co. is recalling approximately 42,000 1986 Aerostar vans following reports of rear-end weld separations—including those holding the rear suspension.

Meanwhile, controversy has arisen over the Ford minivan's braking performance following publication of a highly critical report in a consumer research magazine.

A story circulated last week of at least one case of a rear axle falling off an Aerostar van due to the weld separation problem. However, company spokesmen said they were unaware of any such incident.

Ford said last week it will notify owners of some 30,000 Aerostars to return their vehicles to Ford dealers for reinforcement of certain structural welds in the underbody, including welds retaining the rear suspension. Another 12,000 models are in dealer inventory.

John P. King, service engineering manager, Ford Parts and Service Division, said the reinforcements will be installed on all Aerostars built through Dec. 6, 1985, since it is "not feasible to inspect certain areas that may have been welded inadequately."

King last week acknowledged field reports indicating that substandard welds may separate, causing a reduction in steering response. He said no accidents or injuries have been reported as a result of the condition.

Weld separation would cause drivers to hear "clunking, thumping or rattling noise" at the rear of the vehicle, according to the FPSD statement.

Last week, a spokeswoman for the division reported 52 vehicles to date with weld seperations, but she said she was unaware of cases in which any part of the vehicle became detached.

The company did not release an estimated cost to carry out the Aerostar recall. However, the spokeswoman said, "We figure it will take one man a working day to do it."

She said that in addition to labor costs, some brackets and tools would be involved with the repairs.

Based on hourly labor charges,

GM10 program is scaled back; wagon dropped

General Motors has begun to scale back its massive GM10 project, the largest new-car program in the company's history, by scrapping one of the models and one of the assembly plants originally planned for the program.

The first of the GM10 cars will be launched as 1988 models.

GM has decided not to produce a station wagon-version of the GM10 as had been planned. Sources said engineering problems caused the station wagon to be scrapped.

GM told the 4,800 workers at its Arlington (Tex.) assembly plant last week that the plant will not be included in the GM10 program as had been expected.

Reduced volume expectations were blamed.

GM also is said to be tinkering with the design of the GM10 cars following the successful launch of the Ford Taurus and Mercury Sable. The Ford cars compete in the same mid-size category as the GM10 cars and look similar. However, Ford's models are on the market two years earlier than GM's entries.

The Texas plant now assembles rear-wheel-drive G-cars, the Chevrolet Monte Carlo and Oldsmobile Cutlass Supreme. It will continue to produce the cars until they are phased out, but no new-car program has been scheduled yet for the plant after those models are discontinued.

The GM10 cars, also known as W-bodies, will replace the G-cars as well as GM's A-cars.

GM has said the GM10 project is its most extensive and expensive new product program in history. The $8-billion project originally was to involve as many as seven assembly plants to produce the replacement for GM's midsize family of cars.

About 1.5 million front-wheel-drive intermediates were expected to be produced annually.

So far, the only plant publicly named for the GM10 pogram has been the Fairfax (Kans.) assembly plant.

Other plants said to be included are Oshawa, Ont.; Oklahoma City, and Doraville Ga.

GM earlier had canceled or delayed orders for some of the large new transfer presses involved in its metal stamping systems, indicating a cutback in its original plans for new-product programs.

GM's total order for the presses and related equipment for the Chevrolet-Pontiac-Canada Group and the Truck & Bus Group amounted to more than $1 billion. The amount canceled or put on hold reportedly totaled about $60 million to $110 million worth of equipment.

NHTSA likes CAFE range of 26 to 27.5

By Helen Kahn
Washington Bureau Chief

WASHINGTON.—NHTSA has proposed a CAFE standard between 26.0 MPG and 27.5 MPG for each of the 1987 and 1988 model years. That would substitute for

Poling: 26 MPG a must—Page 8

the current 27.5 MPG for those model years. General Motors and Ford Motor have requested 26.0.

Recently, NHTSA rolled back the 1986 model year CAFE from 27.5 MPG to 26.0 MPG at the request of those two companies.

A public meeting will be held Feb.19 in Washington, and interested parties have 60 days in which to file written comments.

The NHTSA proposal is in re-

Battle for the U.S. market

Greenwald warns of big oversupply

By Mary Connelly
Detroit Reporter

Chrysler Motors Chairman Gerald Greenwald predicts an allout bloodletting in 1986 because the supply of automobiles in the U.S., including imports, will outpace consumer demand by 25 percent.

It could result in U.S.-based companies losing as much as 10 percentage points of the car market, he said. He said those 10 points are "up for grabs."

"There will be 25 percent more auto capacity in America this year than the estimated market size," Greenwald told the Economic Club of Detroit last week. "Somebody's blood is going to

Nissan president sees a 'dogfight'

By Francis J. Gawronski
Tokyo Bureau Chief

TOKYO.—The scramble for shares of the small-car sales pie in the U.S. will turn into a real dogfight by 1988 when car assembly plants now under construction in Japan come on stream and planned exports from South Korea and Taiwan glut the market.

The first skirmishes in that sales battle among small-car manufacturers, however, are expected to occur this year, according to Yutaka Kume, Nissan Motor Co. president.

"In the U.S. market, the Big Three auto makers, flush with enormous profits, have launched aggressive capital-investment programs to

Inventories still high, 73 days—Page 52

Senators get no promises from Japan

By Francis J. Gawronski
Tokyo Bureau Chief

TOKYO.—The verbal maneuvering over Japan's voluntary restraints on auto exports to the U.S. continues in government—both U.S. and Japanese—and industry circles here.

Meanwhile, two conflicting reports on the likely quota outcome were published here last week—one out of the U.S. stating that Japan is likely to continue the curbs, the second quoting a Japanese government official denying the speculation.

The export restraints are scheduled to expire at the end of March.

Senator John Danforth, Missouri Republican, told an audience at the Foreign Correspondents' Press Club of Japan the voluntary curbs on exports should be continued in fiscal 1986, starting in April, in light of the huge American trade deficit with Japan which is likely to exceed $50 billion for fiscal 1985.

Speaking at the Foreign Correspondents' Club, Danforth said that in meeting with government officials, no member of the delegation was given an indication of the Japanese Government's intentions.

Masao Omichi, deputy director of Japan's International Trade and Industry Ministry's (MITI) Automobile Division, said more study is needed on factors such as the yen's rise against the U.S. dollar and other bilateral trade issues before the ministry can make a decision on export curbs.

On the industry side, automotive executives, including Shoichiro Toyoda, president of Toyota Motor Corp., and Yutaka Kume, president of Nissan Motor Co., have made public statements to the effect that the quota system is no longer needed and that they expect the quotas to be dropped next fiscal year.

It is the first time Kume has made such a statement, and Toyoda took the step of publicly criticizing Japanese government officials calling for a quota extension by making his remarks at a news conference.

Danforth, leading a six-member U.S. Senate delegation, arrived in Tokyo with the letter from 13 senators, which also contained a stern warning to Prime Minister Yasuhiro Nakasone and MITI Minister Michio Watanabe (Automotive News, Jan. 13).

The Kyoto News Service report issued from San Diego, where Watanabe was attending a meeting of trade ministers of Japan, U.S., Canada and Europe, quoted an anonymous MITI official as saying quotas would be continued.

But in Tokyo Friday, a ranking MITI official totally denied the report in a statement published by Jiji Press Service. He was reported as saying the quota issue had not yet been raised in San Diego. He said the Reagan Administration is hoping for abolition of the quota while Congress is insisting it stays, and that MITI's policy will be determined after Watanabe met with U.S. Trade Representative Clayton Yuetter Friday, after Automotive News went to press.

Danforth said that when he introduced the quota bill in 1981 he "believed at that time that the U.S. auto industry needed two to three years of protection so that it could be saved from going under."

"However, the problem now is beyond any specific sector," Danforth said. "The problem now is the $50 billion trade deficit the U.S. has with Japan."

Omichi said MITI will consider how the yen's appreciation will affect auto exports to the U.S. and other trade issues before making a decision. He also said the government will consider the senators' letter.

Omichi said that as far as MITI is concerned, the restraint issue "is still a blank sheet of paper."

The English-language newspaper Mainichi Shimbun said one factor that may sway the government to extend the restraints is the increase in the market share of Japanese cars in the U.S. to a record 21.8 percent in 1985 from 19.7 percent in 1984.

It said the Japanese Government has "almost decided" to extend the curbs after members of the U.S. Senate requested an extension in a letter to the Japanese Government. The newspaper did not identify its sources.

The newspaper said the planned entry of Daihatsu Motor Co.—a minicar manufacturer that does not have an allocation of cars under the current quota system—into the U.S. market also is figuring prominently in the government's decision.

If the curbs are lifted, the government expects car exports to the U.S. to rise sharply.

However, the industry would not be too surprised, or upset, if some sort of a quota system with a higher export limit is announced for the 1986 fiscal year.

That way, those in the industry reason, Daihatsu and the small auto makers who are hurting with small quota allocations will be placated, while companies with large number of exports won't be hurt too much.

However, Nissan's Kume said there would be no sharp increase in the number of cars exported by Nissan to the U.S. even if restraints are lifted because the capacity of the dealer network is limited. Toyoda also has said exports would not increase greatly because of higher retail prices for Japanese cars in the U.S. following the rise of the yen's value against the dollar.

Trading halted

Stock rumor puts Bamford deep in Lotus

LONDON.—Stock trading in Group Lotus was suspended last Wednesday (Jan. 15) at the company's request. Clarification of the changes now taking place is expected some time this week.

Rumors concerning the group's three main shareholders—British Car Auctions with 29 percent, Toyota with 21 and J.C. Bamford with 16—have been gathering strength for several weeks.

The main belief is that Bamford, manufacturer of JCB construction equipment, will increase its stake in Lotus. That, in turn, could lead to Anthony Bamford eventually replacing BCA's David Wickins as Group Lotus chairman.

Group Lotus volume was around 850 cars last year. It employed just over 600 people. But it has plans to launch a new sports car this fall, and that would eventually reach production levels of some 3,000 a year.

More important, Lotus engineering contracts are continuing to increase. The company estimates that by 1990, one-third of its anticipated $85 million annual sales will be from outside engineering contracts.

DL combines sportiness and practicality

Subaru 3-Door bows; aimed at young buyers

PENNSAUKEN, N.J.—Subaru has introduced the 3-Door, a hatchback which is a new body style for the company. The car combines fastback styling with a 39.8-cubic-foot cargo area and is targeted mainly at young buyers.

The five-passenger car has the same front seat headroom as the sedan, but sits almost an inch lower, with a windshield raked two more degrees, for a coefficient of drag of 0.32.

The new 3-Door is available with both front-drive and on-demand four-wheel-drive. Its 1.8-liter engine is available with carburetor, single-point fuel injection or turbocharged with multi-point fuel injection.

Standard on the DL model are 82-HP carbureted engine, 5-speed manual transmission with overdrive, four-wheel independent suspension, vented front disk brakes and hill-holder system. It is priced at $8,089, including dealer prep.

The GL—priced at $8,714—features more interior electronics, power steering and power windows. It is available with automatic transmission combined with a 90-HP, fuel-injected engine for $9,543.

The GL 4WD has a carbureted engine and is available either with a 5-speed manual (at $9,289) or 3-speed automatic transmission (at $10,038).

The GL 4WD Turbo has a 110-HP turbocharged engine with 5-speed manual transmission. No automatic is available on this model, which is priced at $12,135.

'85 sales in Japan set another record

By Francis J. Gawronski
Tokyo Bureau Chief

TOKYO.—New-vehicle sales in Japan in 1985 climbed 2.2 percent over the previous year to a record 5,556,844 units. It was the fifth consecutive yearly increase.

The Japan Automobile Dealers Assn., which breaks down vehicle sales figures into two groups—minis and those larger—said vehicle sales excluding minis increased 1.3 percent to 4,028, 132 units, exceeding 4 million for the first time in five years.

JADA said mini-vehicle sales in 1985 increased 4.8 percent over 1984 to an alltime high of 1,528,-712 units.

In the larger-vehicle category, JADA said car sales in 1985 rose 1.4 percent to 2,943,066 units, while truck sales advanced 0.7 percent to 1,063,493 units and buses increased 6.4 percent to 21,-573 units.

By company in the bigger-than-mini class, JADA said Toyota's sales totaled 1,683,387 units, up 3.7 percent, to boost its market share 1.0 point to 41.8 percent.

Nissan was second with 1,047,-276 units, down 2.6 percent, and a market share of 26.0 percent, down from 27.0 percent.

Mazda sales totaled 305,959 units, down 6.7 percent, for 7.6 percent of the market, compared with 8.2 percent in 1984.

Honda sold 301,150 units in 1985 to score a 19.5 percent increase and expand its market share 1.2 points to 7.5 percent. In joining Toyota as the only other company to increase its market share, Honda placed fourth among Japanese auto makers, up one spot from 1984.

Mitsubishi sold 244,890 units in 1985, down 8.2 percent, for 6.1 percent of the market, down from 6.7 percent in 1984.

Isuzu's sales totaled 165,914 units, up 2.1 percent, for a market share of 2.1 percent, the same as in 1984, while Fuji Heavy Industries (Subaru) accounted for 76,288 sales, an increase of 3.6 percent, to maintain its 1.9 percent share.

Hino sold 38,366 units during the year, down 1.8 percent, while Nissan Diesel sold 20,684 units down 2.7 percent. Both Hino and Nissan Diesel managed to hold their market shares at 1.0 percent and 0.5 percent, respectively.

Isuzu, Suzuki eye co-op venture in home market

TOKYO.—Suzuki Motor Co. and Isuzu Motors reportedly have agreed on joint production and marketing of cars and commercial vehicles to cope with the fierce competition in the Japanese market.

The two companies will work out details of the agreement, which will be implemented this spring, and will allow their dealers to sell each other's vehicles.

The move is said to reflect the automotive competition in Japan.

Japanese auto makers, with the exception of Toyota Motor Corp., are said to be operating at a loss in the domestic market.

The first car the two firms' dealers will sell will be Suzuki's 1,000-cc Aska.

Hyundai plans Mitsubishi deal

SEOUL, South Korea.—Hyundai Motor Co. said it will build 3,-000-cc cars in cooperation with Mitsubishi Motors Corp.

The plan for the car, said to be the largest produced in South Korea, calls for an almost equal supply of components from each company. Production is expected to start in the fall of 1987.

The car is expected to be a version of Mitsubishi's redesigned Debonair model that will be introduced later this year. Some components for the Debonair will be produced in South Korea by Hyundai.

4 auto makers seek pact to build Soviet engine plant

Four major auto manufacturers are battling each other for the contract to build a $1 billion engine factory in the Soviet Union.

Alfa Romeo, Fiat, Volkswagen and Mitsubishi were the companies selected by Soviet officials. According to a spokesman for Alfa Romeo, negotiations could last another year or more.

This is the second stage of bidding on the contract for the plant, which will be located in Moscow. Initial proposals were accepted from any company interested in the project, and the Russians narrowed the field to those four companies.

The plant was described as an "intermediate-size" facility. And while Alfa was refused to give specific numbers, reports have indicated the plant will have the capacity to manufacture 250,000 to 300,000 engines per year.

There also is speculation that the Soviet Union will select two companies to work together on the contract.

For Alfa Romeo, the first discussions on this project were arranged by the Italian and Soviet governments since Alfa is a state-owned company.

In Transit

Ford of Europe makes its move against the Japanese with a new-generation commercial van

By Richard Feast

The Transit series of medium-weight panel vans and pickup trucks is a crucial element of Ford of Europe's commercial vehicle presence. The new-generation Transit II, which goes on sale Feb. 10, arrives not a moment too soon.

The original Transit, introduced more than two decades ago, was Ford's first true pan-European model. It has been a howling success with more than 2 million produced, but has steadily been losing market share the past few years — despite recent adoption of a super-economy direct-injection diesel engine option.

At the lighter end of the market, the Japanese have made steady sales gains. At the heavier end, European manufacturers such as Volkswagen, Daimler-Benz, Renault and Sevel (the joint venture Peugeot-Fiat van) have moved strongly into the market with contemporary vehicles.

Now Ford is making its move. Transit II has the aero look of such Ford cars as Sierra and Scorpio. Its low drag coefficient (0.37 on the most aerodynamic model) is as good as the target car makers were shooting for only a few years ago. Ford engineers say Transit II offers improved space, carrying capacity and economy, along with much lower operating cost.

Transit II represents a $580 million investment by Ford, which is manufacturing it at Southampton, England — a dedicated Transit plant — and Genk, Belgium, where Sierra is also made.

One of the company's main concerns is to boost Transit outside the United Kingdom, where it has been a market leader the past 20 years. Indeed, its overwhelming success in the U.K. highlights Transit's sales weakness in other countries.

In 1984, the last year for which complete figures are available, 81,200 Transits were sold for 12.6 percent of its market segment and 6.2 percent of Western Europe's total commercial vehicle market. That compares with a heftier 7.5 percent of Europe's total three years earlier.

Of the 81,200 sales, 39,900 were in the U.K. The remainder were scattered across the continent — mainly 11,300 in West Germany, 10,500 in Italy and 6,400 in France. The local opposition — particularly in Germany, where Ford is a substantial vehicle maker — has largely kept the Transit in the background.

Ford's new Transit II is available in three wheelbases and five body styles. At top, the 100L long-wheelbase van; at left, the short-wheelbase van with side-load door; at right, the Transit long-wheelbase chassis cab. Ford hopes the Transit name will become a household word on the European mainland, as it has in the United Kingdom.

There is clearly plenty of room for improvement by Transit in mainland Europe, even if U.K. prospects for sales increases are limited by Ford's historical domination of the market there and by more competitive stances being taken in the U.K. by General Motors' Bedford Commercial Vehicle Division and BL's Freight Rover Division.

To its credit, Transit has become such an important aspect of the U.K. commercial vehicle scene that the name is often used generically for all medium vans and pickups.

The Transit II line is broad. Engine options are 1.6-liter gasoline (65 horsepower), 2.0-liter gasoline (78 hp) and a 2.5-liter direct-injection diesel (68 hp) that was introduced in the old van in April 1984 — the first production application of such a diesel in that size vehicle.

By the end of 1986 a 3.0-liter V-6 gasoline engine will be offered for vehicles with high-speed requirements, such as police cars and ambulances.

Transit II is available in three wheelbases and five body styles including vans, buses, chassis cabs and parcel vans. A double cab on a long wheelbase will be offered later.

Transmissions include four- and five-speed manuals, four-speed with overdrive and automatic. Payloads range from 1,765 to 4,190 pounds. Most versions will be offered in three levels of trim: Popular, Standard and L.

Through computer-controlled flexible automation, up to 12 different Transit II bodies can be produced along the same assembly line. In comparison, Ford officials claim, most advanced automated car factories can build only a maximum of six or seven body variations.

Western Europe's medium-segment commercial vehicle market rose from 468,400 units (45 percent of total industry volume) in 1974 to 641,200 units (49 percent) in 1984. Continued growth is expected, with volume forecast to top 700,000 units by 1989.

Much of the recent growth has come from Japanese importers specializing in vans that generally are smaller than those produced in Europe. This is a sub-sector the Europeans have ignored at some cost, for the Japanese now claim 20 to 25 percent of sales in the segment.

This has forced a reappraisal by European makers, including Ford which has begun to import Japanese-made Mazdas in certain countries. GM Bedford has manufacturing agreements with Isuzu and Suzuki, while Daimler-Benz plans to make Mitsubishis at its Spanish factory. Also in Spain, Nissan's acquisition of controlling interest in Motor Iberica has led to production of the Vanette there.

As the Europeans fight back, Transit II, designed to take on the Japanese, will be followed by others. There is a good chance Transit II will be the last commercial vehicle designed and built exclusively by Ford in Europe. For the longer term, Ford is talking about joint projects with Fiat of Italy.

While Ford and Fiat supposedly have cooled their desire for passenger-car joint ventures following a breakdown of talks last October, they are now turning their attention to commercial vehicles.

Both companies admit they are talking, and the outcome could involve anything from car-derived vans and pickups to special vans, trucks of all weights and buses. This is all that is known at this stage, but widespread belief is Ford and Fiat's real common ground is trucks.

This will mean projects involving Iveco rather than Fiat Auto. Iveco, a separate and clearly defined structure, handles its own R&D, manufacturing, sales and marketing. Iveco concentrates on vehicles heavier than those made by Fiat Auto with whom it has an arm's-length relationship. Iveco is officially registered in The Netherlands.

By contrast, Ford's car and commercial vehicle operations are less clearly defined. R&D is under one umbrella. Genk, for example, makes Sierra cars and Transit vans. Ford's strength is at the lighter end — the Transit and car-derived Escort and Fiesta vans which are sold through the car dealer network.

There is no indication of the health of Ford's commercial vehicle business. All that is known is contained in general references to geographical regions in Ford Motor Co. financial reports, and they refer to cars, commericals and agricultural equipment.

By most industry reckoning, however, the only companies making sufficient returns on European commerical vehicle opera-

Continued on page 30

In Transit

Continued from page 29

tions are integrated manufacturers such as Daimler-Benz, Scania and Volvo. Daf, MAN and Bedford may be over the worst period, but still are not really healthy. The futures of Renault in France, Leyland in the U.K. and Enasa in Spain remain grim.

Giorgia Garuzzo, Iveco's managing director, expects to report a small profit for 1984, the first since 1982. The company has followed the example set by Fiat Auto, by cutting back on overhead and retrenching. Factories at Mainz, West Germany, and Trappes, France, were shut.

It is doubtful that Ford's single European truck plant (at Langley, England) can be profitable on present volumes of just under 13,000 (1984). The Cargo line has not achieved the sales predicted for it, and has made little impact on Ford business outside the U.K., where it is the market leader. While 9,500 Cargos were sold in the U.K. in 1984, the next best region — West Germany — did not even reach 1,000.

Iveco, No. 2 in Europe behind Daimler-Benz with 33,600 units, had a more-even 1984 sales spread: 14,800 in Italy, 6,800 in West Germany, 6,100 in France and 3,100 in the U.K.

Those figures provide an indication of why Iveco might be interested in Ford's sales and dealer network in the U.K. It would give Iveco better balance in the market for trucks over 3.5 tons. It also might provide some relief for Ford at a time when the pressure is on to send a positive financial statement to Dearborn.

Ford management strenuously denies it wants to get out of the truck-making business in Europe. But if talks with Iveco are serious, each company's strengths and weaknesses have to be key subjects.

Iveco does not deal with smaller vans and pickups which are Ford's European strength. Even Transit is more a competitor of vans produced by Sevel, the joint venture set up by Fiat Auto and Peugeot. However, Iveco's Daily and Grinta vans compete against the top-weight Transits.

Ford and Fiat's most obvious common ground, therefore, is in joining forces to design and build medium and heavyweight trucks. However, a collaboration could be more specific, perhaps involving production of engines, transmissions or axles.

Most European gossip has Iveco buying Ford's European truck operations, running them and gradually integrating them into the Iveco structure. There is no confirmation of that scenario, however.

As an alternative, the two could join forces to produce vehicles neither presently makes — for example, four-wheel-drive utility vehicles or lighter-category vans that have become almost the exclusive preserve of Japanese importers. Both categories have grown considerably in recent years, and further market expansion is expected.

One thing does seem certain: Whatever the two companies are discussing, they will agree early on who the boss will be. Failure to do this was the main cause of the breakdown between the two over joint-car operations; they agreed on a lot, but not on who would have the upper hand.

If Ford and Fiat are now seriously talking trucks, it is assumed the power playing will be settled early. ■

HOW EUROPE'S VAN MAKERS COMPARE

	1984	1983	1982
BL-Freight Rover	16,843	18,152	13,767
Daimler-Benz	56,714	56,713	61,340
Enasa	3,365	3,679	2,840
Ford	87,494	91,295	102,164
GM-Bedford	15,722	17,031	20,289
Iveco	42,600	46,404	45,446
Peugeot SA	26,595	30,881	32,279
Nissan*	15,041	13,978	11,107
Renault	66,749	62,388	63,528
Sevel**	63,430	71,817	56,973
Volkswagen	133,181	134,176	133,572
Total	567,360	595,298	597,999

These are production volumes for Europe's leading manufacturers of special panel vans and pickups up to 3.5 tons. Totals are for all industry, and include some makers not listed.

*Nissan production is through Spain's Motor Iberica, which it controls.
**Sevel is a joint venture by Fiat Auto and Peugeot group.

Ford's Transit II also will be available in a 12-seat bus version (above, left). Ford is manufacturing the new-generation Transit van at its automated Southampton, England, plant (above, right). Ford says up to 12 different Transit bodies can be produced along the same assembly line.

WORLD NEWS BRIEFS

Jaguar gets ready

Still no official word on a launch date for the new Jaguar sedan, but a major supplier reports Sept. 1 this year has been established for Job One production. Jaguar made a record 38,500 cars last year, a 15-percent increase over 1984.

Anti-lock Escort

Ford of Europe's Escort and Orion models will feature anti-lock braking when the facelifted models are unveiled around the time of the Geneva auto show in March. The anti-lock system is Lucas' relatively inexpensive mechanical unit.

Multi-valve Maserati

A version of the Maserati Biturbo featuring six valves per cylinder is announced. The 2.0-liter V-6 has three intake and three exhaust valves.

Japan's extra imports

Foreign car sales in Japan are expected to top 50,000 when the final count for 1985 is completed. That will be second only to the 60,000-plus sold in 1979.

Peugeot 205 for Japan

Automobiles Peugeot's best-selling 205 hatchback goes on sale in Japan in April. It will be

Peugeot 205: Japan-bound

sold by Austin Rover Japan, the Tokyo-based subsidiary of Britain's Austin Rover Group.

Austin exports up

Export sales by Austin Rover Group exceeded 100,000 in 1985 for the first time since 1979. The 104,000 units represent a 15-percent increase over 1984. The company is putting more emphasis on exports — including a U.S. sales launch within a year — while facing increasing pressure in the U.K. from Ford and GM's Vauxhall Motors.

Extra business

"Our 900 dealers in the U.S. could live without it, but they'll live a little better with it," declares Volkswagen sales director Werner Schmidt of the group's decision to export a low-cost model from Brazil to the U.S. starting this year.

Magirus mending

Truck maker Magirus, West German subsidiary of Iveco, expects to report a small profit for 1985. Production rose by about 20 percent, to 11,000 units, in 1985.

Seat formality

Purchase by Volkswagen of a 51-percent share in Seat appears merely a formality following a decision by the Spanish government to cover $1.2 billion in debt and modernization commitments at Seat. VW's supervisory board is expected to approve the purchase at its next meeting, which is scheduled for Feb. 27.

Nissan for Iran?

European press reports suggest Iran is close to signing a car assembly deal with Nissan which would, in effect, replace business currently done by the U.K. division of Automobiles Peugeot.

VW Brasil expands

The Brazilian subsidiary of VW will invest $600 million over the next four years. Among projects involved are exporting truck components to Peterbilt, cars to VW of America and expansion of a cars/oil barter deal with Iraq. VW is the largest of Brazil's four major auto makers.

Siemens scuttled

Robert Bosch of West Germany appears to have beat out Siemens for control of carburetor maker Pierburg. Siemens wanted to buy the company as an entry into the automotive business. However, Bosch, which owns 20 percent of Pierburg, says Rheinmetall will buy the remaining 80 percent.

Bedford's boss

Paul J. Tosch, 45, is appointed chief executive and general manager of General Motors' Bedford Commercial Vehicle division in

Paul J. Tosch

the United Kingdom. He had been chief engineer for the Buick-Oldsmobile-Cadillac luxury-product team in Flint, Mich. Tosch replaces J.T. Battenberg III, who becomes product manager of B-O-C luxury products in Flint. ■

Peugeot may lower the river to raise the D60

By Richard Feast

The latest industrial renovation at Automobiles Peugeot's plants may involve the diversion of a river that runs through one of them. The l'Alane river, which bisects the Sochaux factory in southeast France, occupies a lot of valuable area and is a hindrance to moving about the complex.

Details are scarce because the modernization plan and investment costs have not been made public, but Sochaux is believed to be the company's main financial commitment to new facilities in the coming year.

Sochaux will follow factory modernizations at Mulhouse, where the Peugeot 205 model is produced, and more recently at Poissy, where output of the 309 model will be concentrated.

A spruced-up Sochaux would dovetail neatly with the anticipated — and unconfirmed — Peugeot plan to launch a new-generation upper-medium sedan in the early part of 1987.

Currently known as the D60, the new model is expected to fit in size between Peugeot's 305 and 505 sedans, both of which it will eventually replace. The car — 405 would seem to be a logical name — is certain to form part of a strengthened sales effort by the company in North America late next year.

Peugeot's philosophy is to have three "mother plants" — Mulhouse, Poissy and Sochaux. Each will concentrate on one main model, but would be flexible enough to react to market demands and produce other models. For instance, Poissy, the former Chrysler plant west of Paris, will focus on the 309 and dispatch knock-down kits for assembly at Coventry, England. But Poissy is also being used to build the 205 because demand far exceeds supply from Mulhouse.

In addition, Peugeot satellite factories at Villaverde, Spain, and Coventry provide further flexibility while supplying local requirements. In the case of Spain, 205s (and Peugeot 505s made by the sister Citroen company in Vigo) are being re-exported to the company's European dealers.

At Coventry, where 309 assembly has replaced production of Talbot models, there is strong lobbying for a similar arrangement with the forthcoming D60. Equally strong are Spanish hopes that the D60 will end up there. The Spanish company is currently doing well with a localized diesel version of the old Talbot Solara (known as Escorial), a model in a market segment similar to the D60.

Peugeot sales efforts are now being concentrated on the 309 which launches in other European countries following its introduction in France last year. It got off to a flying start. Peugeot division president Jean Boillot estimated last September that there would be 22,000 orders in France by the end of 1985. That figure was reached by the beginning of November.

Peugeot is confident about sales in France, where its market share continues to rise (21.5 percent last year) on the back of 205 demand. The real concern is exports to the rest of Europe, where Peugeot's image is relatively unknown.

The company has made some progress in Italy — as have other importers — but is being squeezed in the United Kingdom by Ford, General Motors and Austin Rover, and in West Germany by the domestics and Japanese.

Two factors are in Peugeot's favor. Now that its World Rally Championship is confirmed, the company can start promoting its successes against high-tech competitors such as Audi and Lancia.

"Rallying has probably been the most profitable investment Boillot ever made," confides a senior company official. It is believed the sales success in France, where Peugeot is a household name, can be repeated with an appropriate marketing campaign across the rest of Europe.

The second factor is that the 309 is in the leading market category in many northern European countries, whereas southern Europe prefers smaller models such as the 205 and Renault 5 in France, and Fiat Uno in Italy. This means that, in the 309, Peugeot at last will have a true challenger to the chart-topping Volkswagen Golf, Opel Kadett and Ford Escort models.

However, it will take months to realize the full benefit of the 309. The European launch won't be completed until June, and then only with a relatively narrow list of models. The company plans to copy the success of the 205 launch by introducing a number of 309 variants over many months. Introduced three years ago, 205s are still in heavy demand, with the result that daily production (2,350 units) is more than double early expectations.

Given this background, the declared aim of making 309s at a daily rate of 1,000 by May seems modest. If the model is as well-received as initially appears, decisions on boosting daily output will have to be made this spring.

In any case, full sales impact of the 309 will not be felt until the 1987 calendar year. The D60, to be introduced then, will take until 1988 to reach its full market potential.

All this is giving industry analysts renewed faith in the long-term future of Automobiles Peugeot. Jacques Calvet, group president, confirms that Peugeot division led the company back to balanced financial books in 1985, although Citroen is still losing money.

The good news is Peugeot's industrial and commercial restructuring — after taking the ailing Talbot/Chrysler organization on board — and the arrival of some stimulating new products are finally starting to pay off. ■

Chrysler buying its stock from employes, outsiders

Chrysler Corp. expects to purchase approximately 9.5 million shares of its common stock from employes participating in its employe stock ownership plan.

Chrysler is also purchasing up to 25 million shares of its common stock under another program begun a year ago. So far, the company has purchased 13.7 million shares under that program.

"We continue to believe that our stock is undervalued in view of our future product and operating plans, even though its value has risen by about 35 percent since the start of the year," said Chrysler Chairman Lee A. Iacocca.

Chrysler and the UAW agreed in October to terminate the employee stock ownership plan under which almost 13 million shares of common stock had been held in trust for employes. Employes now have the option of receiving or selling the shares. At current market value, an employe participating in the ESOP for the life of the plan will receive approximately $7,800.

Shares in the ESOP were contributed by Chrysler between 1981 and 1984 as part of the federal loan-guarantee program during the company's brush with bankruptcy.

The company said it has agreed to purchase all shares offered to the corporation by its employes in order to maintain an orderly market in its stock.

Iacocca said the purchases under the two programs will reduce to about 100 million the number of common shares outstanding at the end of the year.

Completion of the stock-purchase program would eventually result in the acquisition of an additional 11 million outstanding shares, Iacocca said.

Eurobond venture well-received, Toyota says

TORRANCE, Calif.—Toyota Motor Credit Corp. reported that its first venture—and the first venture of any company of the Toyota family—into the Eurobond market has been well received.

The credit company, which provides wholesale and retail financing for Toyota dealers and their customers in the U.S., entered the international financial market Sept. 27 with a $100-million, four-year, 9.5-percent coupon Eurobond issue.

The action was taken to finance the rapid growth of its receivables portfolio, which amounts to nearly $500 million.

Yale Gieszl, senior vice president of finance and administration for Toyota Motor Sales U.S.A., said the credit company wanted to secure a portion of its funding on terms that more closely match the average life of its retail receivables portfolio.

He said Toyota expects to offer similar issues in the future to support the credit company's growth as a full-service credit corporation.

Eurobonds are purchased by European, Middle East and Far East investors and offer Toyota an opportunity to diversify its funding sources, reducing dependence on the U.S. market, Toyota said.

Auctioneers graduate

Navistar's Springer tells SAE

Buyer profits are key to success

Continued from Page 12

The point is, Springer said, that quality and productivity improvements require team efforts between manufacturers, operators and others. And engineering is a focal point in realizing them.

SAE's interface with manufacturers and operators is critical to the domestic industry's regaining leadership in the world market, Springer emphasized.

"Only you (SAE members) can translate the customer's demand for a better product into manufacturing efficiencies that enhance quality," Springer said.

He called the 1980s the "decade of the customer" and said it requires an "ambitious but frugal agenda." That means redoubling efforts by manufacturers and operators to work together on improving cost-efficiencies, vehicle reliability and comfort—yet learning to live within customers' abilities to pay for products.

It also means making every investment dollar count.

Springer cited five areas of important future product development.

1. Aerodynamics. Fuel efficiency will continue to be a major buying influence. Drag currently accounts for one-half the power used by a line-haul vehicle at cruising speeds. Any improvement will appeal to a driver's sense of performance and bottom-line profitability.

2. Electronics. Diagnostic systems will speed the accurate identification and repair of malfunctions. Monitoring and recording systems will provide operating data bases, performance-evaluation packages, maintenance scheduling and trip logs—all improving quality and serviceability.

3. Vehicle performance. Engines and transmissions that increase vehicle productivity and fuel efficiency, and management systems that monitor horsepower demands at various performance levels and regulate fuel/air mixtures all aid economy and emissions.

Those, along with developing technologies for road stability and safety, aftercooling and turbocompounding and improved tire treading, will greatly increase the value of manufacturers' products on the road and in the marketplace.

4. Driver environment. Manufacturers will have to accommodate the minority of short drivers and the majority of tall, heavy drivers—and do it while reducing the overall sizes of cabs.

It will mean downsizing for exterior efficiency and improving interior comfort and workability.

5. Materials. Steel is likely to remain the top material in truck making, with aluminum a reliable second. But Springer is anxious for technology to mold plastic strong enough to displace steel and aluminum in internal cab support structures.

"When that happens," he said, "we will not only reduce vehicle weight but will also be able to tool panels in half the time and at considerably less cost. That development will affect bottom lines everywhere in the industry," he concluded.

EPA chief signs 2 noise rules affecting trucks

WASHINGTON.—Two noise-control regulations for medium and heavy-duty trucks have been signed by EPA Administrator Lee Thomas.

One defers for two years—from Jan. 1, 1986, to Jan. 1, 1988—the effective date of the 80-decibel (dB) noise standard for new medium and HD trucks with GVW ratings greater than 10,000 pounds.

The other lowers by 3 decibels (3dB) the noise limits for interstate motor carriers. The revised sound-level limits for 1986 and later models over 10,000 pounds GVW are: 83 dB at speeds of 35 MPH or less; 87 dB at speeds above 35 MPH, and 85 dB when the engine is accelerated to maximum engine speed with the vehicle stationary.

EPA rejected applying the motor-carrier levels to all post-1977 trucks because of "unexpected and unreasonably high costs for a substantial number of truck users."

Tho actions respond to petitions from the truck industry and are intended to allow truck makers to coordinate design and engineering efforts to comply with both noise and emission standards, specifically EPA's HD engine nitrogen oxide and particulate standards set last March.

EPA said that while deferring the 80 dB standard will mean loss of near-term health and welfare benefits, reducing in-use noise will counterbalance that with short-term benefits and substantial long-term benefits.

Motors Holding buyout

Ronald Mayer, right, president, Motors Holding of Canada, Ltd., presents the Motors Holding Division buyout plaque to Guy Laplante, president, Trois-Rivieres Chevrolet, Inc., Trois-Rivieres, P.Q.

Truck sales set record of 4.68 million

Continued from Page 12

ing trucks in November.

Medium-duty sales for 12 months totaled 53,439, according to preliminary MVMA reports, off from 60,903 in 1984.

Within the medium segment, Class 4 deliveries totaled zero, compared with 4 in 1984. Class 5 deliveries of 5,081 were off from 5,417, and Class 6 deliveries of 48,358 declined from 55,482.

The heavy segment chalked up 229,314 sales, up from 216,172 in 1984.

Within that segment, Class 7 deliveries of 97,007 were up from 78,479 in 1984, while Class 8 deliveries of 132,307 were off from 137,693 in 1984.

In December, the industry retailed 384,187 trucks, up 21.8 percent from 315,459 in 1984.

The heavy segment recorded 20,916 deliveries, up from 18,932 in 1984.

Within the heavy group, Class 7 deliveries of 8,852 were up from 6,448, while Class 8 deliveries of 12,064 were off from 12,484 in 1984.

The medium segment's December deliveries were 4,667, off from 4,993 in 1984.

There were no deliveries in Class 4, according to MVMA. Class 5 deliveries of 63 were off from 613 last year, and Class 6 deliveries of 4,604 were up from 4,380 in like 1984.

Light-duty deliveries totaled 358,604 in December, up from 291,534 in 1984.

Too soon to judge impact of new incentives

By Edward Lapham
Marketing Editor

The off-pace sales report for early January was inconclusive evidence about the success or failure of the current round of annual-percentage-rate financing incentives.

That means it could be at least one more 10-day period before the industry can determine if the consumer is low-financing sated, requiring a more creative type of incentive for 1986.

One reason for the inconclusive results is that Chrysler Corp. and American Motors upgraded their incentive menus with new annual-percentage-rate financing programs at the end of the period, and Buick added Regal.

The Chrysler program, called "More Ways to Save," runs from Jan. 7 to Feb. 22. It includes a choice of cash rebates up to $1,000 or special APR financing rates.

On Dodge Omni and Plymouth Horizon, the choice is $500 cash, 7.5 APR for 48 months or 9.4 APR for 60 months.

The choice is $500 cash, an 8.6 APR rate for 48 months or a 9.4 APR rate for 60 months on Charger/Tourismo, Aries/Reliant, all Chrysler LeBaron models, all Dodge 600 two-door models and high-line Lancer/LeBaron GTS models.

On the premium Lancer/LeBaron GTS models, the cash option is $1,000.

Also covered by the new program are Dodge Ram D and W-100 and 150 pickup models. There is no cash option, just a 7.9 APR rate for 48 months or a 9.4 APR rate for 60 months.

The APR rates are available only through Chrysler Credit and there is no sold-order protection. Cash allowances may be used as a portion of the downpayment.

The program roughly parallels the 7.9 APR programs adopted earlier by Ford Motor Co. and General Motors. Those programs also expire Feb. 22.

In addition, Chrysler Credit extended a Gold Key lease incentive for 1985 and 1986 models covered in the APR program. The lease incentive makes monthly payments "competitive" with APR payments, a Chrysler spokesman said.

The AMC program runs from Jan. 11 to Jan. 31. It offers cash rebates of up to $700 on Renault Alliance and Encore models or lower APR financing rates. A 7.5 APR rate is available on loans of up to 36 months. The 48-month rate is 7.9 percent.

AMC also is offering a 48-month, 7.9-percent APR rate on two-wheel-drive Jeep Comanche pickups. The Comanche program runs from Jan. 11 to Feb. 22.

Stocks reach 53-month high but days' supply is trimmed

Inventories of unsold new domestic cars rose to a 53-month high on Jan. 1, with little indication of any relief before spring.

In terms of days' supply, the load is slightly less scary.

As of Jan. 1, the 1,629,649 cars in stock represented a 73-day supply. That compares with 1,605,832 and 78 days a month earlier and 1,417,164 and 63 days a year earlier. One must go back to the 1,675,193 of Aug. 1, 1981, to get a unit count greater than that of Jan. 1.

Despite incentives, the number of unsold cars edged higher and days' supply was trimmed only modestly from a month earlier.

If the trend continues, makers will be forced to modify first-quarter production plans and trim weekly output to a level more nearly in line with sales.

Interestingly, Ford Taurus and Mercury Sable, introduced Dec. 26, showed days' supply of 45 and 30, respectively, although they reportedly were hard to find in the nation's showrooms.

Jan. 1 inventory shares by percent were: General Motors, 63.22; Ford Motor Co., 18.46; Chrysler Corp., 14.16; American Motors, 2.55; Volkswagen, 1.18; Nissan, 0.28, and Honda, 0.15.

A month earlier, shares by percent had been: GM, 62.69; Ford, 19.00; Chrysler, 14.04; AMC, 2.60; Volkswagen, 1.18; Nissan, 0.26; and Honda, 0.23. (All figures for VW, Nissan and Honda in this story are based on U.S. production only.)

By size class, the Jan 1 inventory was split this way: Subcompact, 16.50 percent; compact, 21.95; intermediate, 39.78; standard, 11.52, and luxury, 10.25.

Month-earlier shares: Subcompact, 16.54 percent; compact, 22.04; intermediate, 39.47; standard, 11.02, and luxury, 10.93.

Domestic models by size class and days' supply on Jan. 1:

Subcompact—Encore, 172; Fiero, 163; Alliance, 130; Pontiac, 1000, 115; Laser, 113; Nova, 93; Turismo, 86; Horizon, 85; Charger, 83; Volkswagen, 82; Daytona, 75; Omni, 75; Chevette, 64; Lynx, 45; Escort, 26; Nissan, 20, and Honda, 7.

Compact—Capri, 140; Camaro, 105; Eagle, 102; LeBaron, 102; Firenza, 91; Firebird, 89; Skyhawk, 82; Mustang, 79: Aries, 63: Sunbird, 60: Reliant, 57; Tempo, 53: Cimarron, 52: Cavalier, 49, and Topaz, 46.

Intermediate—Regal, 168; Calais, 132; Somerset Regal, 130; Grand Prix, 126; Lancer, 119; Monte Carlo, 111; Cutlass Supreme, 110; Dodge 600, 102; Century, 99; Caravelle, 91; Bonneville, 90; LeBaron GTS, 89; Cutlass Ciera, 84; Marquis, 84; Pontiac 6000, 81; Citation, 78; LTD, 78; Cougar XR-7, 76; Thunderbird, 75; Celebrity, 69; New Yorker, 69; Taurus, 45; Grand Am, 37, and Sable, 30.

Standard—Parisienne, 135; Plymouth, 104; Chevrolet, 98; LeSabre, 81; Diplomat, 77; Crown Victoria, 69; Oldsmobile 88, 66, and Grand Marquis, 61.

Luxury—Electra, 108; Corvette, 105; Toronado, 85; Riviera, 68; Oldsmobile, 98, 65; Seville, 64; Eldorado, 61; Cadillac, 54; Continental, 47; Fifth Avenue, 46; Mark VII, 42, and Lincoln, 32.

Service Index reflects hiccup in shop business

By Arthur Flax
Automotive News Staff

Service and parts business at new-car dealerships in November was down compared with November, 1984, but business for the entire year was running well ahead of the 1984 clip.

According to the Automotive News Service Index, shop business at dealerships in November amounted to 98.1 percent of the volume recorded in the same month in 1984.

November was the first month in 1985 to show a decline in service volume from the year-ago figure. Prior to that, the most recent decline in volume occurred in December, 1984, when the Service Index amounted to 99.7 percent of the December, 1983, figure.

For the first 11 months of 1985, service and parts volume showed a climb of 7.5 percent over the like period a year earlier.

Most indicators in November showed losses from the previous year. Sales of all parts and accessories, the category with the biggest loss, was down 5.4 percent from the 1984 month.

Total labor sales (including both customer-paid and warranty) was the only indicator showing an increase. It was up 3.5 percent.

Gross profit on all labor, parts and accessories sales during the month registered a loss of 1.2 percent. Repair orders written were down 2.3 percent and shop parts sales (both customer and warranty) were down 4.0 percent.

Through November, the top gainer for 1985 was total labor sales, which were 10.6 percent higher than in 1984. Repair orders written were up 8.2 percent in the first 11 months of 1985. Gross profit on all labor, parts and accessories sales were up 7.2 percent. Shop parts sales (including both customer and warranty) were up 6.3 percent. Sales of all parts and accessories were up 4.5 percent.

Figures used in the Service Index are averages compiled from reports on shop business from a cross section of the nation's new-car dealerships.

SERVICE INDEX
98.1★

	Nov., '85 vs. Nov., '84	11 mos., '85 vs. 11 mos., '84
Gross Profit on All Labor and P&A Sales	−1.2%	+7.2%
Repair Orders Written	−2.3%	+8.2%
Total Labor Sales (Customer & Warranty)	+3.5%	+10.6%
Shop Parts Sales (Customer & Warranty)	−4.0%	+6.3%
Sales of All P&A	−5.4%	+4.5%

★—Survey by Automotive News shows that dealers' service and parts business in November, 1985, was 98.1 percent of business in November, 1984. Service business in the first 11 months of 1985 was 107.5 percent of business in the corresponding period in 1984.

Walsh retires, named contributor for Auto News

John E. Walsh, 68, has retired as service editor of Automotive News. He will continue to write for the paper as a Florida-based correspondent.

Walsh joined Automotive News in 1957 from the Detroit Free Press. He was named service editor in 1969, then moved to the post of truck editor in 1971. He covered the truck industry until March, 1985, when he was once again named service editor.

John E. Walsh

He holds a bachelor of arts degree from Syracuse University.

The service editor's position is not yet filled.

Car-sales dip continues as year opens

By Jenny L. King
Detroit Reporter

Early-January new-car sales continued the model-year downturn, despite low-interest incentives.

Sales were down 8.34 percent from 1985, yet were the second highest in a decade and averaged 21,864 deliveries per selling day.

Compared with the late-December mini-boom, when sales swelled to 231,593 under financing incentives, the most recent total was down 57,000.

It was the ninth year-to-year decline in the ten 10-day selling periods of the 1986 model year.

Compared with the same 1985 period, GM sales declined 4.37 percent, Ford was down 11.69 percent, Chrysler dropped 16.07 percent, Honda sales of U.S.-built units fell 29.28 percent and AMC's sales estimate was down 52.60 percent.

In market shares, GM pushed past the 60-percent mark for the first time since mid-May 1985, with 61.17 percent compared with 58.63 percent a year ago.

Ford was down to 22.9 percent from 23.77 percent, Chrysler dipped to 11.85 percent from 12.94 percent and AMC plunged to 0.88 percent from 1.71 percent. VW edged up to 0.68 percent from 0.60 percent, Honda slipped to 1.81 percent from 2.35 percent and Nissan held 0.71 percent.

In year-to-year sales by make, Cadillac was the big winner, up 13.14 percent, followed by Plymouth and VW, up 3.29 percent, and Chevrolet, up 1.5 percent. The losers were Renault, off 54.7 percent; Lincoln, down 40.4 percent; AMC, down an estimated 37.5 percent, and Honda, off 29.28 percent.

VW to reduce line speed at U.S. plant

By Kathy Boyer
Detroit Reporter

Production at Volkswagen of America's Westmoreland (Pa.) plant will be halted Jan. 27 for one week. VWoA said the production interruption is to prepare for slower production-line speeds.

The plant, which assembles the Golf and GTI, will cut back its output Feb. 3, and 220 hourly employes will be laid off on Jan. 24.

The cutback at Westmoreland will result in an output of 400 cars a day. In 1985, the plant produced 470 cars a day, bringing the year-end total to 96,000 cars.

Despite the reduction in line speed, production this year is expected to come very close to last year's total and wind up at 92,000 to 96,000 cars, VWoA said.

Reminded that there has been talk that the VW Jetta might someday be assembled at Westmoreland, the spokesman replied, "A year-long conversation has been held by everyone *except* Volkswagen about producing the Jetta at Westmoreland, (but) there are no such plans."

At the Detroit Auto Show, a VWoA official was asked whether Jetta would ever be built at Westmoreland. He answered, "I still light a candle. It's my monthly novena. Novena Jetta."

Volvo to halt bus output

ROCKLEIGH, N.J.—Citing current and foreseeable market conditions, Volvo North America Corp. said it will stop producing and marketing transit buses in North America late this year.

Volvo entered the city bus market here in 1982 and has delivered about 120 buses. The company has contracts to produce 144 more, and it said the contracts will be honored and parts, service and technical support will continue.

Overcompetition has characterized the medium-sized bus market —where about 10 companies, with capacity to build 13,000 buses a year, have been battling for a 2,500-unit-a-year, no-growth market. (Automotive News, Oct. 28, 1985).

Bjorn Ahlstrom, president of Volvo North America, said, "The bus market in the U.S. simply does not and will not permit us to generate an adequate return on our investment."

Nissan completes plant in U.K.

TOKYO.—Nissan Motor Mfg. U.K., Ltd. (NMUK), a wholly owned subsidiary of the Japanese firm, has completed construction of its $35.5 million car plant in Washington New Town, Tyne and Wear County, England.

Installation of machinery, including robots, is underway. Pilot production is scheduled to start in April, with production officially scheduled to begin in July.

NMUK will initially produce a car to replace the Nissan Stanza, which is now sold in Europe at the rate of 24,000 units a year.

The plant consists of three main buildings: A body and assembly shop, a paint shop and an administrative building.

Auto output drops 2.7 pct. for week

By Kathy Boyer
Detroit Reporter

With little overtime scheduled at U.S. car plants last week, estimated production of 168,942 units fell 2.65 percent from the previous week's 173,542.

Last week's target was also down 6.45 percent from the year-ago week's 180,598.

Companies shared last week's scheduled production as follows: General Motors, 57.06 percent; Ford Motor Co., 20.18 percent; Chrysler Corp., 17.28 percent; Honda of America Mfg. Co., 2.22 percent; Volkswagen of America, 1.39 percent; New United Motor Mfg. Co., U.S.A., 1.12 percent, and Nissan Motor Mfg. Co., 0.75 percent.

AMC's Kenosha plant remained idle last week to adjust inventory. The plant is expected to resume operation today (Jan. 20.).

GM's Fiero plant in Pontiac resumed production today (Jan. 20). It had been down to prepare for production of the new Fiero GT and also for inventory adjustment.

Ford slated overtime at its Edison (N.J.) plant Saturday (Jan. 18).

All Ford car plants except Atlanta are scheduled for daily overtime this week (Jan. 20).

Ford's Kansas City plant is slated for overtime Saturday, Jan. 26.

Two nine-hour daily shifts are scheduled at the following Chrysler plants this week: Belvidere, Ill.; Newark, Del., and St. Louis No. 2.

Chrysler's Jefferson (Detroit) plant is slated for two 8½-hour daily shifts this week.

Canada cars top 20,000

Canadian auto makers targeted weekly production of more than 20,000 units for the first time this year.

The estimated output of 20,734 cars last week was 9.25 percent more than the previous week's 18,979 and 3.74 percent above the year-ago week's 19,987.

The truck makers' scheduled output of 18,346 units last week was 1.14 percent more than the previous week's 18,139 but 3.24 percent below the year-ago week's 18,961.

Downtime at General Motors' Oshawa No. 1 plant will continue this week (Jan. 20) for paint conversion. The plant produces the Pontiac 6000 and the Oldsmobile Cutlass Ciera.

Trucks inch ahead of 1985

This year's domestic truck production has inched past 1985's total build at this point.

So far this year, 167,938 trucks have been assembled, 0.89 percent more than the 166,464 completed last year at this time.

Last week's scheduled build of 70,891 units was 1.44 percent more than the previous week's 69,882 and 11.00 percent more than the year-ago week's 63,867.

Nissan's Smyrna (Tenn.) plant resumed production Jan. 13 after being down for two weeks for retooling.

The first new-model Nissan truck was completed Jan. 14. This is the first major model change since Nissan began production in Tennessee in June, 1983.

General Motors' medium and heavy-duty truck plant in Pontiac will be closed for one week beginning today (Jan. 20) due to changes in market demand.

GM's plants in Janesville, Wis., and St. Louis were scheduled for two overtime shifts Saturday.

All Ford plants except Louisville are scheduled for daily overtime this week (Jan. 20).

GM's new look in Europe

NADA

New Orleans to set record for turnout

By Edward Lapham
Marketing Editor

Some 18,000 franchised car and truck dealers, and other auto industry representatives, will descend on New Orleans later this week for the 69th annual NADA convention, Feb. 1-4.

NADA said it will be the "largest NADA convention in history in terms of participants, exhibits and workshops."

Highlighting this year's convention will be addresses by Vice President George Bush, Ford Chairman Donald Petersen and and U.S. Chamber of Commerce Chairman Frank Morsani.

Also during the convention, Northern California Ford/Chrysler-Plymouth dealer James B. Woulfe will replace Southern California Cadillac dealer William J. Symes as NADA president.

In addition to the usual round of informal socializing and the 144,000-square-foot exhibition area with exhibits by 215 suppliers, there will be 146 seminars on 43 topics and make meetings to discuss factory-dealer relations.

Likely to be among the hottest seminars this year are those dealing with selling cars to women, managing multi-franchise organizations, computerization and improving customer satisfaction.

The workshops are divided into four general categories: Business management, general management, sales and lease and service. The workshops will begin Sunday morning in the New Orleans Convention Center.

GM bidding for Leyland truck unit

By Richard Feast
European Editor

LONDON.—General Motors—determined to increase its share of Europe's commercial vehicle business—has focused on Leyland Vehicles, the long-time money-losing truck and bus division of state-owned BL.

An announcement is expected shortly.

What is not clear is whether Leyland alone is up for sale or whether it is being offered with a carrot: The sister Land Rover group with which it is paired. It is Land Rover that makes the luxury Range Rover station wagon, which is scheduled to bow in the U.S. this year.

GM's focus on Leyland Vehicles follows its review of other commercial-vehicle makers. It looked at Pegaso truck builder Enasa, owned by the Spanish state government, but backed away. Then it was dispatched by the West German establishment when it looked at acquiring MAN.

British Government policy is to sell off unwanted state assets. Jaguar was floated, and the Unipart component division may be the next part of BL to go.

The Austin Rover Group's long-term future is far from clear, although it has established design and manufacturing links with Honda.

Land Rover, together with its van-making Freight Rover subsidiary, has historically been a success. It ran into difficulties when Third World sales slumped, but a major reorganization and a switch in emphasis toward more stable Western markets seems about to return it to a sound footing. It is a self-contained and autonomous maker dedicated to four-wheel-drive vehicles and is a substantial exporter.

On the other hand, Leyland Vehicles, with which it is bracketed

Chrysler's tough road

Chrysler Corp.'s Arizona Proving Grounds near Wittmann include 10 miles of rugged gravel and paved road around the perimeter of the 3,812-acre site. Severe dips along the north side of the road restrict speeds to 15 MPH to prevent vehicle damage. Story from the dedication of the proving grounds is on Page 3.

GM purchases British performance-car firm

General Motors has purchased 58 percent of Group Lotus, the British engineering and performance car manufacturing company, for about $20 million and has made a public offer to buy the rest.

GM paid the equivalent of about $1.80 per share for its stake in Lotus and offered the same price in its public offering for the outstanding shares, making the entire transaction potentially worth about $32 million.

Insiders say GM also is interested in acquiring the Lotus racing team, a separate entity not owned by, but associated with, Group Lotus. The racing team and Lotus name would boost GM's international image.

GM said it was interested in Lotus for its engineering capabilities. Lotus specializes in engines, new composite materials and design technologies.

GM has been Lotus' largest customer for engineering services for the past four to five years, although other makes also contract with Lotus for engineering. Lotus has 28 projects going for 18 customers, including Chrysler Corp., Austin Rover, Peugeot, Rolls-Royce and Toyota.

GM said Lotus will continue to operate as an independent entity with its own product identity and philosophy. It will continue to provide worldwide engineering consulting services "with contin-

GM follows Ford pattern in Europe

By Richard Feast
European Editor

LONDON.—General Motors last week turned its attention to Europe. It established a pan-European operation to coordinate its car business; it bought a majority stake in Lotus, and it negotiated heavily to buy BL's commercial vehicle division.

GM's new European auto operation is to be based in Zurich—neutral territory—and headed by Ferdinand P. Beickler, who has been chairman and managing director of Adam Opel in West Germany.

Ferdinand P. Beickler

The organization, which becomes operational Feb. 1, will be officially known as General Motors Europe—Passenger Cars.

Lotus is not part of GM Europe. Lotus reports directly to Detroit.

GM thus follows Ford Motor Co., which organized a syncronized European supervisory structure 17 years ago. The main difference is that Ford of Europe embraces trucks and tractors as well as passenger cars.

None of the changes affects the corporation's commercial vehicle operations in Europe, the Bedford manufacturing and sales organization in the U.K. or the Covesco company (jointly owned with Isuzu) in West Germany.

However, GM is known to be involved in takeover talks with BL concerning its commercial vehicle division. GM's similar discussions with MAN in West Germany and Enasa in Spain came to naught, but it is understood that the GM-Leyland Vehicles link has made positive progress. An announce-

No decision soon on quotas

TOKYO.—It is too early for Japan to decide whether it should continue its restraints on car exports to the U.S. when they expire at the end of March, said Michio Watanabe, head of the Ministry of International Trade and Industry.

Watanabe made the statement to the Japanese Cabinet following his return from a three-day meeting with trade ministers of the U.S., Canada and the European Community (EC) in San Diego.

A political decision will be made at the 11th hour by the government and the ruling Liberal-Democrat Party after studying the yen's exchange rate, price hikes by the Japanese auto companies and moves by the U.S. Congress, he said.

Watanabe cautioned that the U.S. and the EC are taking sterner attitudes than anticipated toward their trade deficits with Japan.

Mid-engined Quicksilver by Zimmer

Zimmer Motor Cars, Florida-based builder of expensive 1920s-looking autos, will do an about-face with the modern-looking Quicksilver, a mid-engined sports-luxury car based on General Motors mechanicals. Price is rumored to be in the mid-$40,000s. Formal announcement is expected at the NADA convention.

Late News

Rolls ups sales, prices

LYNDHURST, N.J.—U.S. sales of Rolls-Royce Motors, Inc., rose 2.5 percent last year to 1,110 from 1,083, making the U.S. the company's largest market for the second consecutive year. The firm said it expects a similar increase for 1986. It said orders are strong and waiting times for its automobiles stretch up to 12 months and to 18 months in the case of the new $198,000 Silver Spur Limousine. The company also announced an average increase of 4 percent for its 1986 models.

Right-to-Workers claim NLRB favor on Saturn

By Geoff Sundstrom
Washington Reporter

WASHINGTON.—After meeting with the General Counsel of the National Labor Relations Board, a National Right to Work Legal Defense Foundatation attorney said he would be "shocked if we lost any aspect of the case" the group has filed to stop the Saturn labor agreement between the UAW and General Motors.

At a press conference immediately after their meeting last week with NLRB General Counsel Rosemary Collyer, officials of the Right to Work foundation said they were "encouraged and convinced the NLRB considered the case a very important matter" and that it would recieve "careful consideration".

The group wants the General Counsel to issue a formal complaint against GM and the UAW and the Saturn labor pact they announced last February.

The National Right to Work Legal Defense Foundation contends the agreement violates federal labor law and a Tennessee right-to-work statute prohibiting pre-hire agreements.

The foundatation claims the deal unlawfully restricts workers' rights in determining workplace representation.

GM would say only that it believes it inappropriate to comment on a matter pending before the NLRB. A UAW spokesman said the union had "no comment at this time."

Rossie Alston, formerly a NLRB staffer and now staff attorney for the right-to-work group, said GM and the UAW have refused to release copies of the labor pact. He said enough details of the agreement have been made public to support his group's case, but the refusal by GM and the UAW to supply the document "indicates both parties know they have a problem."

Labor agreements are not normally made public until ratified by union members, industry sources say.

If the NLRB General Counsel decides to issue a formal complaint, the matter will be refered back to its Detroit office to be brought before an administrative law judge there.

If the decision is to not file a complaint, the case will "stop dead in its tracks," the Right-to-Work group's president, Reed Larson, said.

Larson also said GM is now seeking a conference with the NLRB and that he believes Collyer or her staff will seek a meeting with the UAW on the case.

Alston said he believed the NLRB's Collyer wwill reach a decision on the complaint within a month to six weeks. He said that if a complaint is filed, the Detroit NLRB office normally would have about 60 days to assign the matter to an administrative law judge.

Alston said his group's meeting with Collyer was used to discuss a number of technical matters related to the case such as the statute of limitations and possible defenses that could be used to protect the agreement.

He said no decision had been made whether to appeal the General Counsel's decision if it goes against the right-to-work foundation's position.

In a statement read at the press conference, Larson said, "Rosemary Collyer holds in the palm of her hand the future of labor-management relations affecting the lives of millions of American workers and the entire global economy."

He continued, "If this coercive agreement is allowed to stand, it will mean the end of millions of jobs in the U.S. automobile industry. Al Warren, GM vice president for industrial relations, made it crystal clear.

"Warren said, and I quote, 'I don't think we as a corporation can afford to have nonunion automobile plants in the U.S. any more than the union can. We cannot compete with a nonunion company building automobiles at the prices I think they could do it at in this country.'"

Larson added, "UAW officials have said the Saturn deal gives them 'a license to go after Nissan.'

"If GM and UAW officials succeed in imposing monopoly unionism throughout the auto industry in America, automobile manufacturers will have no choice but to go overseas—to Taiwan, Korea, Mexco, Japan," Larson said.

GM to pay for repairs on engines

WASHINGTON.—General Motors has admitted possible engine-block cracking in some 2.5-liter 4-cylinder engines in 1984 cars and has told the government it will pay for necessary repairs and warrant the engines for 5 years or 100,000 miles.

The Center for Auto Safety estimated that 400,000 engines might be involved. It estimated that with only a 10 percent failure rate, the repairs would cost GM $100 million.

If cracks occur in the cylinder block casting between the valve lifter cavity and water jacket, engine coolant will be lost and the engine will fail.

CAS figures labor at 10½ hours and cost at well over $2,000 per car. GM figures labor at slightly under 9 hours but uses an add-labor section for certain problems.

This "special policy"—issued by GM to dealers, filed with NHTSA and reported by CAS—deals with the charges made by the safety center last February. At that time, GM accused CAS of exaggeration and indicated that any problem that occurred would be handled under the 24-month/24,000-mile powertrain warranty. At that time, most of the cars involved were still under that warranty.

The center has asked GM Chairman Roger Smith to inform all owners of their eligibility for free repairs, if needed.

A speed endurance run was featured during dedication ceremonies

St. Louis to get Chrysler minivan

By Mary Connelly
Detroit Reporter

WITTMAN, Ariz.—Chrysler Corp. will boost minivan production to more than 300,000 units a year when a second plant in St. Louis comes on line early in 1987.

Chrysler Motors President Harold K. Sperlich said no decision has been made on where the large, rear-wheel-drive models currently assembled at St. Louis Plant II will be transferred.

St. Louis 2 assembles the Chrysler Fifth Avenue, Dodge Diplomat and Plymouth Gran Fury as well as the Caravelle Salon, sold only in Canada.

Speaking at the dedication of Chrysler's new $12 million proving grounds here, Sperlich said the startup at St. Louis 2 will be slow with a second shift added based on market demand.

"We'll have enough capacity to really go at the market," Sperlich said. "We don't know how high is up. We do feel strongly that up is higher than one plant's worth, and that is why we're moving ahead."

Currently, the minivans are produced only in Windsor, Ont., and the company has been saying for some time it may open an additional source. Chrysler produced 274,000 minivans in the 1985 model year.

In the summer of 1984, Chrysler announced that the St. Louis plant would undergo a $250-million renovation for 1986-model-year production. That decision was reversed due to sales volumes of the Fifth Avenue.

Sperlich also said the fate of the Jefferson Avenue assembly plant in Detroit remains unknown although discussions continue with city, state and UAW officials. The plant has no scheduled product after the 1987 model year.

"We have no idea at this time what the answer is going to be," Sperlich said. "At the moment the facility has no future."

Sperlich reiterated that Chrysler is currently seeking streamlined labor agreements with fewer job classifications and simplified work rules at its plants, including Jefferson.

Noting that the drive for more innovative labor agreements is part of the company's effort to improve product quality and cut costs, Sperlich said there has been "tremendous support from the leadership of the UAW."

He also said it is unclear how the inexpensive, mini-compact market will "shake out" in the U.S. because of the competition with "good-quality" used cars.

"It's an unknown how big that market will be in this country," he said. "It's a huge market in other countries where there isn't the used-car population."

He predicted that of the 26 auto companies currently selling in the U.S. market today, "marginal producers" will eventually "fall out" because sales volumes will not sustain effective dealer, marketing and service organizations.

"You'll come down to the dozen or so significant automobile companies in the world," he said. "The big dozen will dominate."

Chrysler marked the dedication of its 3,812-acre Arizona Proving Grounds with a NASCAR-certified, 24-hour speed and endurance run.

Four 1986 models—two Dodge Daytona Turbo Zs and two Chrysler Lasers—set speed and endurance records running for 24 hours at average speeds of more than 126 MPH.

A Daytona Turbo Z averaged 126.967 MPH for 24 hours and covered 3,048.78 miles on the new proving grounds' 4.2-mile high-speed oval. Its best lap speed was 131.526 MPH.

The average speed for the other cars were: Laser Number 1, 125.896 MPH; Laser Number 2, 126.301 MPH, and the other Daytona, 126.679 MPH.

The four cars were attempting to surpass records set in 1956 when Chrysler dedicated its first proving grounds at Chelsea, Mich.

"The object of the inaugural run," said John D. Withrow, Chrysler's executive vice president for product development, "is to show that our modern fuel-efficient 2.2-liter turbocharged engine can not only keep up with the world-famous Chrysler hemis of the past, but do better."

The new proving grounds, completed in October, are used to test braking performance, vehicle noise, fuel handling, carburetion, ride, handling, vehicle durability and reliability.

Subaru slates own program on lease cars

PENNSAUKEN, N.J.—Subaru will launch a pilot leasing program in New York, Pennsylvania and New Jersey Feb. 24 and, if things go according to plan, it will be expanded to cover the entire nation within one year.

Subaru Leasing Corp., a subsidiary of Subaru Financial Services, which is in turn a subsidiary of Subaru of America, will capitalize and supervise the program. It is negotiating with two firms to service the plan.

Closed-end leases with purchase options and an early termination provision will be offered.

Where state laws permit, lessors will be able to amortize the cost of one of Subaru's nine service contracts across the life of the contract.

Consumer leases are the fastest growing segment of the leasing market, and one that Subaru feels it can easily step into, said Larry Wright, leasing manager of the leasing and financial subsidiaries.

NHTSA proposes truck MPG levels for 1988, 1989

WASHINGTON.—NHTSA has proposed a range of numbers for 1988 and 1989 light-truck CAFE standards.

Its proposal for 1988 calls for combined mileage ratings for four-wheel-drive and two-wheel-drive trucks that would be at some point between 20.5 MPG and 22.0 MPG. For 1989, the proposal calls for a combined truck CAFE number between 20.5 MPG and 22.5 MPG.

Truck makers would be allowed either to average their fuel-economy figures for both 4x4s and 4x2s together to meet the "combined" figure, or to meet separate standards for their 4x4 fleets and their 4x2 fleets.

For the 1988 model year, the separate standard for 4x2s is proposed as being somewhere between 21.0 MPG and 22.5 MPG. For 4x4s, the proposal would put the fuel-economy number between 19.5 MPG and 21.0 MPG.

For the 1989 model year, the proposed range is from 21.0 MPG to 23.0 MPG for the 4x2 fleet and from 19.5 to 21.5 MPG for 4x4s.

Tying the knot

PACCAR will begin marketing this Volkswagen do Brasil Class 7 truck next fall. Although built in Brazil, it is being spec'ed by PACCAR for the North American market with premium U.S.-designed powertrain components.

truck industry news

11-month registrations set record, with all segments up

By Joseph Bohn
Truck Editor

Truck registrations soared to a record high for 11 months, topping the 1984 pace—the previous record—by 15.4 percent.

There were increases in all three segments, though the light segment, as usual, led the upturn.

Medium-duties showed the next strongest gain, followed by heavies with the smallest increase.

Although the mediums and heavies maintained some strength, industry forecasters continue to predict downturns for them in 1986.

The most recent forecast by Rockwell International calls for a drop of 10 to 15 percent in North American medium/heavy deliveries in 1986.

Rockwell President Donald R. Ball, in his forecast to New York financial analysts, didn't foresee any return to the disastrous levels of 1982-1983.

Overall, truck manufacturers registered 4,253,532 units for January-November, up 15.4 percent from 3,686,240 in like 1984.

Light-duty registrations of 3,999,298 were up 15.8 percent from 3,454,729 the previous year.

Within the light segment, Class 1 registrations of 2,756,800 were up from 1,983,239 in 1984. Class 2 registrations of 1,208,663 were off from 1,438,067, and Class 3 registrations of 33,835 were up slightly from 33,423.

Medium-duty deliveries totaled 59,553, up 11.6 percent from 53,372 in the 1984 period. Within the medium segment, Class 4 deliveries of 809 were up from 644. Class 5 deliveries of 5,836 were up from 3,870. And Class 6 deliveries of 52,908 were up from 48,858.

The heavy segment's deliveries of 194,681 were 9.3 percent ahead of 178,139 for the 1984 period.

Within the heavy group, Class 7 deliveries of 70,931 were up from 60,703, while Class 8 deliveries of 123,750 were up from 117,436 in 1984.

Among the heavies, Navistar, which continues to use the International name on its trucks, improved its lead over Ford by a small margin.

International had 21.80 percent of the market after 10 months and 21.87 percent after 11 months.

Ford had 21.04 percent of the heavy market after 10 months and 20.99 percent after 11 months.

Mack's market share fell from 11.91 percent after 10 months to 11.75 percent after 11.

GMC was up a hair, and Freightliner was off fractionally from October to November.

Among the heavies, Ford continues to show the best 11-month gain over 1984, with a market share up 1.82 percentage points, followed by White whose 11-month share was up 0.63 percentage points and Mack whose share was up 0.51 percentage points.

Mercedes-Benz showed a 0.43 percentage-point year-to-year improvement.

Kenworth and Peterbilt had the biggest losses in share. Kenworth's share was off 1.52 percentage points, while GMC's was off 1.11 percentage points from a year-earlier.

International's year-to-year share was off 0.93 percentage points, and Peterbilt's was off 0.87 percentage points.

Other heavy-duty truck makers showed fractional gains over 1984.

Firms improve engine, truck coverage

Cat, Isuzu expand warranties

Caterpillar Tractor and Isuzu Truck of America have expanded their warranties, a general trend among manufacturers these days because of the increased competition in the marketplace.

Caterpillar, of Peoria, Ill., expanded its Extended Service Coverage program to allow more flexible coverage for owners of Cat-powered trucks delivered on or after Jan. 1, 1986.

North American truckers can select the type and length of plan for Cat 3208, 3306B or 3406B engines that best suits their needs.

The new program expands current options and complements Caterpillar half-million-mile Major Component Protection and Full Service Coverage plans.

The Extended Service Coverage for 3208 truck engines is available in 50,000-mile/12-month increments up to 150,000 miles or 60 months.

For the 3306B or 3406B, coverage is available in 50,000-mile/12-month increments up to 300,000 miles or 60 months.

Optional 3306B or 3406B Major Component Coverage extends parts protection on 12 major components up to 500,000 miles or 60 months, whichever comes first.

Major Component Protection is not available on the 3208 truck engines.

Owners of Caterpillar-powered trucks or buses can buy coverage in the above-described increments anytime during the standard warranty period.

Mandatory dealer service stops during the chosen coverage period or is not required.

There are no penalties or coverage reduction proration clauses based on mileage.

Extended Service Coverage can be transferred to the next owner during the coverage period.

Enrollment in the 3306B/3406B Extended Service Coverage program includes one free performance analysis report test. It may be made anytime during the origi-

Alexander promoted in Fruehauf shakeup

DETROIT.—Leon Alexander has been named executive vice-president-Trailer Operations and president of Fruehauf Division, replacing George F. Malley who resigned.

Joseph Silk, vice president of operations—Fruehauf Division, also resigned, with no successor named.

Although there were no specific reasons for the shakeup, some major truck firms reported scaling back their Fruehauf orders because of quality problems or high prices. Alexander is a 36-year management veteran with Fruehauf's liquid and bulk division. Most recently, he was its vice president and general manager.

Industry working hard to improve its record, MVMA executive says

Study documents big-truck deaths

Nearly 4,500 people die each year in crashes with tractor-trailer rigs, but the industry is working hard to reduce that number, according to an MVMA vice president.

All too often, the big trucks barrel down the highways with inadequate brakes, bald tires and drivers who are tired and/or not necessarily qualified, the Insurance Institute for Highway Safety's report, Big Trucks, charged.

The report said that:

1. In a fatal crash involving a big truck and a passenger car, the car occupant is 35 times more likely to be killed than the trucker.

2. Trucks take a much greater distance to stop than cars. From 55 MPH, most cars stop in 140 to 150 feet. But a loaded rig typically takes 250 to 300 feet to stop. An empty rig takes 300 to 400 feet. And a bobtail can take 500 feet.

3. Many big trucks don't have front brakes. They are required on new rigs, but regulations allow them to be removed from three-axle tractors. They also are often disconnected on two-axle tractors.

4. Nineteen states do not issue classified licenses to handle big trucks. Drivers can go out with general commercial licenses and try to handle 18-wheelers.

5. Truck safety inspections (still relatively rare) turn up these kinds of violations: Only 5 percent of trucks and drivers inspected in Colorado in 1985 were in compliance with all regulations. Two-thirds of the 10,000 trucks recently inspected in Missouri were ordered out of service. Even in states like Washington, where all trucks carrying hazardous cargo are required to be inspected, half of the trucks and drivers have been found to be in violation of truck safety rules, the insurance institute reported.

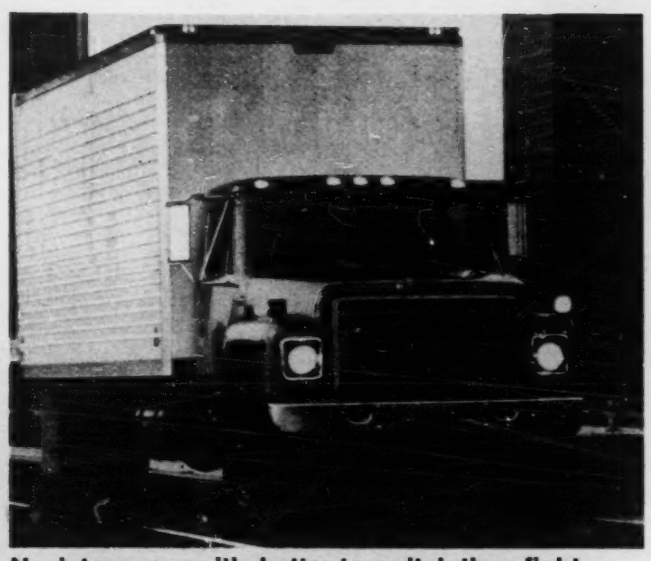
Peter Griskivich, MVMA vice president, also pointed out that a growing fear of big trucks is the Number One problem in the trucking industry, but much was being done to improve it.

Public fear, he added, is at the root of the industry's image problem and poses a real threat to its ability to introduce more productive equipment or get the productivity gains promised truckers by the 1982 highway bill.

The industry has taken positive steps, some in cooperation with government, to make highways safer, Griskivich pointed out.

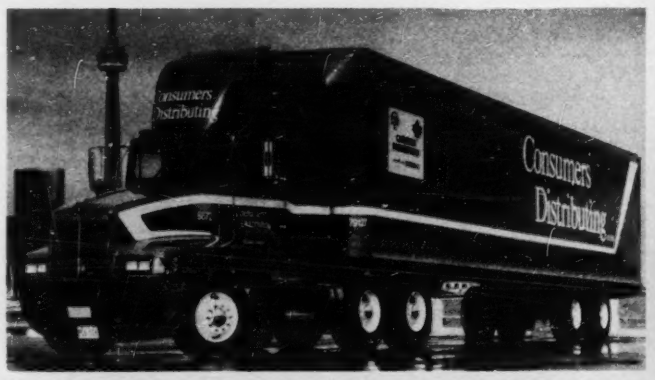
Along with past studies, the Department of Transportation is financing an analysis of mileage traveled by heavy trucks. It will provide, for the first time, accurate information on heavy-truck accident rates by kind of vehicle and road, time of day, cargo carried, etc.

Please turn to Page 13, Col. 1



Navistar proves it's better to switch than fight

Operators of medium-duty trucks and school buses who switched to Navistar International's 6.9-liter diesel V-8 averaged 60 percent better fuel economy than with similar-sized V-8 gasoline engines in 2½-year, 50-vehicle, 2.5-million-mile customer tests. Navistar furnished the oil and all filters for test-drivers and agreed to trade back gas engines for diesels for those who wanted to switch.



Kenworth wins Canadian economy contest

A Kenworth T600A, operated by Eastern Rentals, Ltd., Kingston, Ont., won Canada's "Trucksave" contest, taking first and second places in the 75,000-to-86,000-pound Gross Combined Weight category. Its best average was was 12.09 MPG at a GVW of 84,413 pounds. Another T600A, shown above, won third place, giving Kenworth a clean sweep.

Industry working hard to improve its record, MVMA executive says

Study documents big-truck deaths

Continued from Page 12

The industry recognizes the driver's crucial role in truck accidents, and that is why it created the Professional Truck Driver Institute of America, the MVMA executive added.

The institute is a historic first step in getting bad drivers off the road.

It will accredit truck-driver training programs by establishing uniform, nationwide standards for judging curricula, facilities and quality of instructors. Accreditation will be voluntary.

Certification of truck drivers as professionals is the long-range objective of the Institute since the immediate need is to address the turnover of drivers, estimated to be well over 50 percent in the next decade.

Allaying public fears about sharing the road with larger, more productive trucks led a coalition of industry organizations, labor and government to finance a pair of films on the dynamic behavior of tractor-trailer combinations.

Another safety initiative is the Image and Safety program of the American Trucking Assns. It is directed at the driver, fleet management and legislators.

It includes driver training, better safety information for carriers, support for increased roadside inspections of trucks, the expansion of the Commercial Vehicle Safety Alliance to all states and a more effective National Driver Register than presently exists.

ATA's program reflects the industry's recognition that safety and image are really the same thing, Griskivich said.

He noted that Transportation Secretary Elizabeth Dole has made truck safety her top priority in 1986 and has called on the industry to work with the government on:

1. Increasing the number of roadside truck inspections in states.
2. Requiring a single, classified license for drivers.
3. Strengthening the National Driver Register and extending it to all 50 states within the next three to five years.
4. Reducing the incidence of hazardous-materials accidents.
5. Launching an inspection program for the nation's bus fleet.

Cat, Isuzu boost warranties on truck engines

Continued from Page 12

nal warranty or selected coverage period.

The in-chassis engine evaluation is conducted under full-load test conditions. The test produces a comparison that will tell if an engine fails to conform to original specifications and will identify most necessary repairs. Repairs can be made under the terms and conditions of the extended service coverage program.

Isuzu Truck, South El Monte, Calif., has adopted a new vehicle warranty policy that greatly expands coverage of the Isuzu NPR Class 3 truck.

The expanded warranty, which retroactively covers all NPR trucks sold in the U.S. since their introduction last spring, expands coverage of the entire vehicle (except tires).

It also provides protection from perforation caused by corrosion.

Previously, the entire vehicle (except tires) had 12-month, 24,000-mile protection. Now, there is no mileage limitation.

The engine and crossmembers in the powertrain also get 24-months, unlimited mileage coverage which includes 100 percent of the cost of parts and labor on the engine and 50 percent of the cost on crossmembers.

Frame (side rails) are covered for 12 to 60 months, unlimited mileage, with 50 percent of the cost of parts and labor paid for by Isuzu.

Perforation from rust is covered for 36 months, with the company absorbing 100 percent of the cost.

SELL YOUR CUSTOMERS ACCESSORIES FROM JUST ANYBODY AND NEXT TIME THEY MIGHT GO TO JUST ANYBODY.

Cutting corners may cost you and your customer more than you bargained for.

You see, genuine Subaru accessories are designed exclusively for a Subaru. The others have to be modified, and never seem to work or fit exactly right.

And with ours, there's never a problem getting service from Subaru dealers in or out of state.

Remember, if your customers feel they've been short changed, it could cost you a customer.

Don't get hung up looking for keys.

If you're losing sales while your sales staff is hunting for keys, let Supra get you off the hook with Supra MAX.™ It keeps your sales staff on the lot selling, and it keeps your vehicles secure.

With the Supra MAX, your key remains safely with the vehicle. Only our Title® key can open the Supra MAX. And locksmiths are not equipped to duplicate Title keys. This one-key system eliminates losses, duplications, and confusing key boards. It's also the toughest and most durable automotive key box on the market.

So if you want the best key boxes made, give us a call about the Supra MAX and our other styles of auto key boxes. They'll keep your sales staff on the lot selling.

Detroit dealer faces trial on energy charges

DETROIT.—Auto dealer Robert Mechigian, of Bob Saks Oldsmobile in Farmington Hills, Mich., must stand trial on charges that he incited other auto dealers to have their utility meters altered illegally, a judge ruled.

Mechigian, free on personal bond pending the trial, could be sentenced to up to five years in jail if convicted of solicitation of energy fraud and four years if convicted of energy fraud.

Both charges are felonies, and he could face the loss of his franchise if convicted. General Motors' franchise agreements force a dealer convicted of a felony to give up the franchise.

Mechigian, according to court testimony, referred a local contractor to three Detroit-area auto dealerships, saying the contractor could reduce their power consumption by altering their electric meters. The contractor, who is on probation for other utility tamperings, testified that Mechigian introduced him to at least a dozen auto dealers.

Marvin Tamaroff, of Tamaroff Buick, and Robert Vermeulen, owner of Page Toyota, both in Southfield, Mich., testified they paid the contractor to alter meters at their dealerships.

Tamaroff repaid more than $14,000 to the utilities, and Vermeulen pleaded guilty last year to energy fraud.

Mazda Central begins work on new HQ building

IRVINE, Calif.—Mazda Motors of America (Central), Inc., has broken ground for its new $15-million corporate headquarters building.

Toru Ogawa, president, called the site dedication an important step in Mazda's growth in the U.S.

"The announcement of this exciting new facility is further evidence of our long-term commitment to the U.S. and its economic growth," Ogawa said.

The new headquarters will be built on an eight-acre site in the Irvine Spectrum business and industrial complex. Construction of the five-story, 118,712-square-foot building is expected to be completed in early 1987. The new facility will house an estimated 250 Mazda Motors employes.

Mazda Central is the importer of Mazda cars and trucks sold in 31 Western and Midwest states through four distributors and more than 500 dealers. It is currently headquartered in Rancho Dominguez, Calif. The company joins two other Mazda organizations, Mazda (North America), Inc., and Mazda Distributors Pacific, in establishing headquarters in Irvine.

GM's CAFE-rescue plan is approved by NHTSA

WASHINGTON.—NHTSA has approved General Motors' plan to generate enough CAFE credits in the 1986 model year to wipe out its 1984 shortfall, which made GM liable for $46,315,695 in fines.

GM's plan—apparently helped by its current 7.9-percent financing on cars with 4-cylinder engines, but not mentioned by NHTSA in its letter to GM—is to reach 26.3 MPG for 1986 models. If achieved, that would result in 14,820,000 credits ($74.1 million) which would more than offset the 1984-model-year shortfall.

China taxes cars owned by foreign firms

BEIJING, China.—As if things weren't tough enough, foreign firms doing business in China—already chafing from foreign exchange and housing problems—were dealt another blow: A tax on cars retroactive to last May.

The Peking Highway Tax Collection Center delivered its New Year greeting by announcing that the new tax of $12.50 a month per car applies to all foreign companies. Diplomats, however, are exempt from the tax.

A tax official said the Ministry of Communications decided to impose the tax last year, but failed to notify the foreign companies.

The tax notice is said to coincide with government demands that embassies and news organizations sign new contracts for the employment of Chinese staffs, with pay hikes of about 50 percent. Businesses faced similar pay increases last year for their staffs.

It is estimated that 1,000 firms from more than 30 countries have opened offices in Beijing since 1979.

Fredlund's 50th

Nationwide hikes discounts on passive-restraint cars

COLUMBUS, O.—Nationwide Mutual Insurance Co. will provide new and increased insurance-premium discounts to policyholders whose cars have air bags and/or automatic seat belts.

The discounts apply to all 1986 Mercedes-Benz models and some 1986 Volvo, BMW and Toyota Cressida models.

The discounts will apply to "first-party" auto coverages and will include medical payments, family compensation and personal injury protection for policyholders whose cars have safety equipment that operates automatically.

Insurance-premium discounts for those coverages will include 40 percent on cars with air bags that protect both the driver and front-seat passengers. That is 10 percentage points higher than current discounts.

The new discounts will be 25 percent on cars with air bags on the driver side only and 10 percent on cars with other automatic safety systems.

President Paul A. Donald said Nationwide's range of auto safety discounts, recognizing different levels of crash protection, is the first of its kind in the insurance industry.

The discount package, introduced by Nationwide in New York State last year, will be filed in all appropriate states with a projected effective date of April 1.

Nationwide's new program expands a 30-percent discount on first-party coverages that the company has provided since 1973 to car owners having air bags protecting all front-seat occupants.

EPA may place metal degreaser on hazard list

WASHINGTON.—The EPA is proposing to list trichloroethylene, a widely use metal degreaser, as a hazardous pollutant.

The decision means the agency will study what risk the chemical poses to public health and how best to control it. It could also result in the EPA proposing standards to limit ambient emission of the pollutant.

Trichloroethylene is considered by the EPA to be a probable human carcinogen. When inhaled, it can also impair the central nervous system, cardiovascular system, the liver and kidneys. The agency estimated that emissions of the substance result in about 4.1 cancer deaths each year across the country. For those who work with the solvent, the risk of getting cancer is about 9.4 in 100,000 when exposed for 70 years, the EPA said.

About 65,000 metric tons of trichloroethylene were produced in 1983 and about 57,000 metric tons of it evaporated in the shops, factories and industrial facilities that use it, EPA said. Ninety percent of 1983's production was used for metal degreasing and the remainder as a secondary solvent in producing adhesives, paint, pesticides and pharmaceuticals, the agency said.

EPA's studies of the chemical are expected to take about two years.

Potamkin brothers lecture on success

PHILADELPHIA.—Robert and Alan Potamkin, brothers who are leading auto dealers, lectured on their successes in the automobile industry before the Wharton Entrepreneurial Club at the Wharton School of Business Administration at the University of Pennsylvania here.

Both are graduates of Wharton. The brothers were characterized by Arthur Bobrow, club president, as two of the university's most successful graduates.

Stock of unsold imported cars highest in 3 years at 338,315

By Kathy Boyer
Detroit Reporter

The stockpile of unsold imported cars in the U.S. was the highest in three years as 1986 opened.

The Jan. 1 inventory count was 338,315 cars, according to Automotive News estimates. Not since the 355,603 in stock on Feb. 1, 1983, had the total been so high.

The figures may surprise some import-car dealers, who generally have been complaining of inventory shortages. They were, perhaps, reflecting the market trend.

For despite the upward bulge in actual numbers, the selling supply was skinned back to 28 days as opposed to the figure of 49 days represented by that peak inventory of 35 months ago.

The comparative size of the Jan. 1 inventory can best be measured against the fact that stocks have reached 300,000 only four times since February, 1983.

The import-car stock of 338,315, compares with the month-earlier total of 304,079, and a year-earlier figure of 259,933. The latest days-supply figure for cars, 28, compared with 31 days a month earlier and 32 a year earlier.

Import trucks were a bit of a different story. Inventories Jan. 1 dipped slightly to 102,664 from 103,138 a month earlier, which had been the highest in 10 months. On Jan. 1 a year ago, the count had been 114,485.

Truck inventories represented a 38-day supply on Jan. 1, compared with 41 days a month earlier and 45 days a year earlier.

The Jan. 1 combined imported car and truck inventory rose to 440,979—the highest count since Feb. 1, 1983, when 448,308 units were reported. In the 35 months since then, the combined stockpile has topped 400,000 only two other times.

The combined Jan. 1 inventory represented a 30-day supply, compared with 33 days a month earlier and 36 days a year earlier.

Several makes ran counter to the downward trend. Although Volvo's daily selling rate stayed nearly the same, it had much more stock than it had the previous month. A spokesperson said, "This was a kind of planned buildup to accommodate sales for January and February, which are anticipated at about 10,000 per month."

Yugo's increase was due to all but 142 vehicles arriving late at its dealerships.

Alfa Romeo's increase was a combination of slower sales and and late shipments. Jaguar reported lower inventories resulting from shipments that did not arrive.

On Jan. 1, import-car inventories were divided this way: Japan, 62.79 percent; Germany, 25.18 percent, and other countries, 12.03 percent.

One month earlier, the shares were: Japan, 63.59 percent; Germany, 26.06 percent and other countries, 10.35 percent.

All inventory figures in this story include dealer and port inventories and everything in transit in between. Days' supplies are figured on the basis of selling days, excluding Sundays and holidays.

These are the import cars by country of origin and their days' supplies (the rule of thumb is that any make with less than a 15-day supply is hard to find in a showroom):

Japan—Honda, 8; Toyota, 11; Mazda, 13; Subaru, 25; Mitsubishi, 31; Nissan, 35; Isuzu, 107, and Chevrolet imports, 138, (including 89 for the Suzuki-built Sprint and 191 for the Isuzu-built Spectrum).

Germany—Mercedes-Benz, 19; Porsche, 56; BMW, 62; Audi, 64, VW, 83, and Merkur, 108.

Other countries—Jaguar, 3; Yugo, 24; Saab, 47; Alfa Romeo, 57; Peugeot, 103, and Renault, 263.

Trucks and their days' supplies: Isuzu, 65; Chrysler, 61, Nissan, 58; Mitsubishi, 54; Toyota, 23, and Mazda, 21.

All import truck figures include Nissan's domestic models.

Calvert elected in Houston

HOUSTON.—Mike Calvert, Mike Calvert Toyota, has been elected chairman of the Houston Automobile Dealers Assn.

Monte Carlo LS joins Chevy lineup

The Monte Carlo LS joins the Chevrolet lineup for 1986. The Luxury Sport features a new aerodynamic front fascia and flush-mounted composite headlamps. Engine choices are a 4.3-liter fuel-injected V-6 or a 5.0-liter V-8.

Volvo scales back plans for new Uddevalla plant

By Stig Bjorklund
Staff Correspondent

GOTHENBURG, Sweden.—Volvo has scaled back its ambitions for its future plant in Uddevalla, about 30 miles north of here.

Instead of a complete manufacturing plant on the site of the present shipyard, there will be only a final assembly plant—at least initially.

The product will be Volvo 740 cars with painted bodies coming from the main Gothenburg plant. The original plan had been to use the Uddevalla plant to increase production capacity for the 240.

The decision eliminates the need for a body and paint shop which had been a stumbling block because of emissions (Automotive News, Jan. 13). Volvo President Pehr G. Gyllenhammar, in an official statement, described the change in plans as the only way to break the deadlock with the government board and get anything started in Uddevalla.

Volvo could wait no longer for the necessary permits regarding emissions from the future plant's paint shop, he said.

Since several parties have been arguing about which maximum level could be acceptable, and since the bids have been so far apart, any official figure would inevitably have resulted in an appeal from some of the parties involved. The risk, therefore, was that the matter would drag on for months.

Apart from taking a load off the Volvo Torslanda plant here, which after more than 20 years is due for a modernization anyhow, the change of plans for Uddevalla means the Volvo production roof is going to stay at some 300,000 cars a year for some time to come.

Nothing is promised about a future expansion of the Uddevalla plant, which is now going to need a maximum of 1,000 persons instead of 1,200 as was planned.

When full production of 80,000 cars a year is going to be reached also remains an open question. Production start in Uddevalla is now scheduled for April, 1988, instead of summer, 1987, as was originally planned. Recruiting will start this spring.

Mid-January count is best since 1979

Sales spurt to a seven-year peak

By Jenny L. King
Detroit Reporter

New-car sales in mid-January soared to the highest level recorded in seven years.

Nudged by special interest rates on several domestic models, new-car buyers returned to the showrooms Jan. 11-20 and did enough buying to push sales 30,000 above the year-earlier period, making this year's tally the strongest since the pre-recession year of 1979.

The mid-January count of 199,246 was up 18.13 percent from 168,668 in 1985. It also was an increase of 13.88 percent over the 174,954 sales reported Jan. 1-10. Year-to-date sales were up 4.08 percent, to 374,200 from 359,537.

American Motors was the only domestic maker that failed to match or surpass its 1985 level. In fact, AMC's sales estimate of 1,550 was the lowest of any company's total for the period and was off 50.40 percent from 3,125 a year earlier. AMC earned just 0.78 percent of the period market, down from 1.85 percent in 1985.

General Motors reported domestic sales of 117,014, an increase of 18.18 percent from 99,016. Ford Motor Co. was up 20.98 percent, to 49,616 from 41,012. Chrysler's 24,577 sales were up 13.25 percent from 21,702.

Volkswagen, up 24.68 percent to 1,637 from 1,313, had the best year-to-year sales gain of any of the domestics in terms of percentage of increase. Honda was up 13.72 percent, to 2,843 from 2,500, and Nissan reported first-year sales of 2,009.

GM's share of the market for the period crept up to 58.73 percent from 58.70 percent. Ford claimed 24.90 percent compared with 24.32 percent in 1985. Chrysler was off to 12.34 percent from 12.87 percent.

Honda slipped to 1.42 percent from 1.48 percent while VW was up to 0.82 percent from 0.78 percent. Nissan earned 1.01 percent of the mid-January market, and AMC dropped to 0.78 percent from 1.85 percent.

Year-to-year make sales were up for 12 of the 15 makes on the charts a year ago.

Three showed losses: AMC was down an estimated 41.67 percent; Renault, 51.67 percent, and Buick, 7.16 percent.

Plymouth was up 22.18 percent; Chrysler, 10.44 percent, and Dodge, 8.09 percent. Ford climbed 24.63 percent; Mercury, 16.32 percent, and Lincoln, 5.46 percent.

Pontiac, up 86.30 percent, nearly doubled its year-ago total. Oldsmobile was up 28.62 percent; Chevrolet, 6.27 percent, and Cadillac, 2.91 percent. VW was up 24.68 percent, and Honda was up 13.72 percent.

There were eight selling days in the period both years. This year's daily rate of 24,906 was up 18.13 percent from 21,084 in 1985.

Top nameplates for Jan. 11-20 were: Cavalier, 12,820; Celebrity, 10,556; Cutlass Ciera, 10,317; Escort, 9,797, and Tempo, 8,444.

General Tire offers life-of-car warranty

By David Nypaver
Crain News Service

MARCO ISLAND, Fla.—General Tire has introduced a premium all-season radial for the aftermarket with a lifetime guarantee.

The Ameri-Classic steel-belted radial is guaranteed as long as the purchaser owns the vehicle, with a free replacement for road hazard damage during the first 30,000 miles. It will go on sale in April.

General Tire said the tire features a dual-compound tread formula. It said the center compound allows for better traction and smoother ride, while a harder compound in the shoulder improves handling and resists abrasion during cornering.

The tire also has belt-edge overlays that prevent the buildup of damaging internal heat, an inner liner to reduce rapid wear from underinflation and an internal coating of puncture sealant.

General Tire originally advertised the new radial with a 60,000-mile guarantee but after further testing decided to make the guarantee last the life of the vehicle.

The new tire will be available in 12 sizes. Ray Evans, senior vice president of sales and marketing, expects that 25 percent of its sales will come from customers who buy a new car and have the tires switched to the Ameri-Classic.

General Tire has also introduced a V-rated version of its XP-2000 high-performance tire and a medium truck-tire line, the Ameri-Steel IV.

Big brake fluid reservoirs to stay

WASHINGTON.—NHTSA has abandoned a rule that would have allowed smaller brake fluid reservoirs in trucks over 10,000 pounds GVW.

The agency had proposed use of the smaller reservoirs if the vehicles were equipped with self-adjusting brakes and a brake indicator lamp that is activated by low brake fluid.

NHTSA said, however, that after analyzing comments and available data, it concluded that "smaller brake fluid reservoirs would unnecessarily result in an added safety risk without any compensating safety benefits."

Nissan first to move cars on U.S. ship

Nissan Motor Co. will become the first Japanese auto maker to use U.S.-registered vessels to ship vehicles to North America.

The auto maker announced it will charter ships owned by Marine Transport Lines, Inc. (MTL), Secaucus, N.J.

Nissan Motor Car Carrier, a Nissan subsidiary which operates seven carrying vessels, will sign a three-year contract with MTL to transport 30,000 to 40,000 cars annually to the U.S. and Canada beginning next year, a Nissan spokesman said.

MTL will build a freighter capable of carrying 4,000 vehicles. MTL will start the service in the second half of 1987, said company Chairman James Rand.

The carrier will be built by Sumitomo Ship Builders in Japan for an estimated $20 million, he said.

It will carry the U.S. flag and be crewed by U.S. citizens.

Rand said MTL had been negotiating with Nissan for almost two years and that its contract with the company calls for it to transport vehicles around the world.

Toyota Motor Corp. uses U.S. vessels to ship automotive components to the U.S.

Three American carrier lines transport parts destined for New United Motor Mfg., Inc. (NUMMI), in Fremont, Calif.

Toyota announced it is studying the possibility of using U.S. ships to carry about 10 percent of its exports—or 60,000 units—to the U.S.

The U.S. has been dissatisfied with Japanese auto manufacturers' use of Japanese ships rather than American vessels in exporting their vehicles to the U.S. The Japanese are said to prefer their own ships because of their lower rates.

While MTL is the immediate beneficiary of increased U.S. pressure on the Japanese to open up the car-carrier business, U.S. Congressional sources say they will not slacken their efforts to open the market further.

The sources said hearings on the matter will likely be held in early March in the House Merchant Marine and Fisheries Committee. Its chairman, Rep. Walter B. Jones, North Carolina Democrat, has a bill pending that would require that at least half of all Japanese cars exported to the U.S. be transported by U.S. vessels.

In the Senate, Frank Murkowski, Alaska Republican, is expected to try to attach a resolution calling for negotiated opening of the market to trade reciprocity legislation sponsored by Senator John Danforth, Missouri Republican.

Danforth has led the Senate's efforts to open up Japanese markets to U.S. competition.

Many in the shipping industry believe that Korean auto makers will also ship vehicles on their national carriers. Hyundai currently has orders in place for two car carriers to handle its exports.

In a reversal of the situation, General Motors recently signed a contract with a non-U.S. car carrier to handle its imports from Daewoo Motors in Korea. GM said that it "preferred to work with people already in the business."

Japanese auto makers have given the same reason to explain their preference for Japanese carriers.

Car production rises; week hits 1986 high

By Kathy Boyer
Detroit Reporter

U.S. auto makers estimated last week's production at 176,433 cars, the highest total since the week ended Dec. 14, when 182,811 were assembled.

Last week target was 3.95 percent more than the previous week's 169,728 and 14.17 percent more than the year-ago week's 154,539.

Companies shared last week's estimated production as follows: General Motors, 56.16 percent; Ford Motor Co., 19.94 percent; Chrysler Corp., 16.78 percent; Honda of America Mfg. Co., 2.13 percent; American Motors, 1.56 percent; Volkswagen of America, 1.33 percent; New United Motor Mfg. Co., U.S.A., 1.08 percent, and Nissan Motor Mfg. Co., 1.02 percent.

GM announced it will cut production and lay off some 350 employes at its Arlington (Tex.) plant on Feb. 10. A company spokesman said the reason for the cutback was softening demand for the Oldsmobile Cutlass Supreme and Chevrolet Monte Carlo.

GM notified workers that there are no current plans to replace the plant's aging rear-wheel-drive product line with a front-wheel-drive (GM10) product.

GM also announced plans to cut production 18.8 percent on Feb. 10 at its Bowling Green (Ky.) plant, which assembles the Chevrolet Corvette.

American Motors' Kenosha plant assembled its first cars of the year last week. The plant had been down for several weeks for inventory adjustment.

But the plant is closed again for the next two weeks because of slow sales.

When the plant reopens on Feb. 10, the daily production rate will be reduced from 550 units to 430, idling 875 people.

Ford slated Saturday (Jan. 25) overtime at its Kansas City and Atlanta plants.

Chrysler scheduled Saturday overtime at the following plants: Newark, Del.; St. Louis (No. 2), and Jefferson (Detroit).

Chrysler's Belvidere (Ill.), Newark and St. Louis plants are also scheduled to operate two nine-hour daily shifts this week (Jan. 27).

Canadian output highest of year

Last week, Canadian car and truck makers scheduled their highest production of any week this year.

The estimated build of 20,800 cars was 1.49 percent more than the previous week's 20,494 and 18.95 percent above the year-ago week's 17,487.

Last week's estimated output of 18,826 trucks—the highest of any week this year—was 1.43 percent more than the previous week's 18,561 and 22.25 percent more than the year-ago week's 15,399.

Trucks extend 1986 lead

Truck production is extending its year-to-date lead over 1985.

So far this year, 238,275 units have been assembled, 2.05 percent more than the 233,483 completed last year at this time.

The gain during the previous week was 0.89 percent.

Last week, the makers estimated production of 69,609 trucks, 2.81 percent below the previous week's 71,619, but 17.62 percent more than the year-ago week's 59,183.

General Motors' medium- and heavy-duty truck plant in Pontiac resumes production today (Jan. 27) after being idle for one week due to changes in market demand.

GM slated overtime Saturday (Jan. 25) at the following plants: Lorain, Ohio; Lordstown, Ohio, and Baltimore.

Ford scheduled Saturday (Jan. 25) overtime at its Twin Cities and Lorain, Ohio, plants.

Group will take fight to consumers

FDA says subsidies cost public $240 a car

By John A. Russell
New York Staff Writer

NEW YORK.—Preliminary figures released last week by the Ford Dealers Alliance show that incentives given to large fleets cost the consumer $240 to $280 per car.

FDA said that counters the argument by manufacturers that the incentives do not affect the public.

In addition, while manufacturers have claimed that sales to fleets are necessary to maintain volume, the study shows that overall sales of new cars would increase between 30,000 and 80,000 units per year if there were no incentives.

Ed Mullane, FDA president, termed the study new ammunition in the battle his organization has long waged against fleet subsidies centives. For the FDA, it provides the impetus to wage that war on the state level and bring the consumer into the fray.

Mullane made it apparent that FDA is changing its tactics slightly when he stressed that this is a consumer issue as well as a dealer issue. While the thrust will be to obtain legislation barring subsidies, FDA will be moving to increase public awareness of such incentives and raise public ire against them.

"The political pressure has to come from the consumer, not the dealer," Mullane said, "and when we make that happen, the legislators will see that this is no special-interest cause or single-industry bill."

The study was commissioned by the FDA last year. It hired Mathtech, a research arm of Martin Marietta Corp. based in Princeton, N.J. Mullane said the company was asked to study the effects of fleet incentives on all segments of the market.

The complete study, which Mullane said is being printed, will be ready for distribution this month.

Mullane made the information public last week in a speech before the Indiana Automobile Dealers Assn. In an interview with Automotive News, he said his fight has shifted to the state level. That is a tactic Mullane has advocated since it became apparent there would be little action at the national level.

"Our new direction is to throw our entire resources, our entire dealer body, our entire spirit into key state battles," Mullane said.

As for the reason the dealers have failed in stopping the incentives, Mullane said, "We have failed to convince our legislators that this is a consumer issue."

The study by the FDA is continuing since manufacturers' fleet programs change, but Mullane believes the dealers now have the weapons they need.

Another tactic which Mullane has been advocating will be introduced shortly—display stands with anti-subsidy postcards in dealership showrooms and service departments. Customers will be invited to sign the cards and send them to their legislators.

Mullane said that approach has been used successfully in the past and he drew the example of senior citizens putting pressure on legislators not to deduct withholding tax from interest-bearing accounts.

Advertising also is being prepared for dealers to run in local newspapers. The ad campaign will be geared to getting consumer support for the fight.

"The consumer will act in his own behalf," Mullane said, "and the legislator will be responsive to his only boss—the voter."

Trade deficit in autos is $31 billion for '85

By Geoff Sundstrom
Washington Reporter

WASHINGTON.—Trade in passenger cars made up $31 billion of the nation's $148 billion trade deficit for 1985, according to the Commerce Department.

The 1984 U.S. trade deficit of $123.3 billion included $25 billion for passenger cars.

The Commerce Department report does not include good overall measures of trade in trucks and in auto parts. Data on those sectors is spread among several merchandise categories in the report.

The Commerce Department said passenger-car imports to the U.S. totaled $37.617 billion for 1985. It estimated exports of passenger vehicles at $6.020 billion.

In 1984, imports of passenger cars were $30.207 billion; exports were $4.868 billion.

In 1985, Japan was once again the largest exporter of cars to the U.S. with $17.126 billion worth of vehicles. In 1984, Japan sent $13.099 billion worth to the U.S.

Canada had the second largest value of import shipments to the U.S. in 1985, estimated at $11.323 billion. In 1984, Canadian shipments totaled $10.095 billion.

Car shipments on a country-by-country basis from nations other than Japan and Canada are not available in the Commerce Department report.

Overall car shipments to the U.S. from nations other than Japan and Canada totaled $9.328 billion in 1985, Commerce said. In 1984, those countries accounted for $7.013 billion in shipments (numbers do not add due to rounding).

On the export side, the biggest customer for U.S. auto shipments continues to be Canada. It $5.724 billion worth in 1985, after receiving $4.560 billion in 1984.

Shipments to Canada represent the majority of U.S. automobile exports, but the value of those shipments was only half as large as Canada's auto exports to the U.S. for 1985.

All other nations combined took $2.960 billion worth of U.S. passenger cars last year, the Commerce Department said, down from $3.07 billion in 1984.

The 1985 U.S. trade deficit with Japan was estimated at $49.7 billion, largest of any nation.

UAW President Owen Bieber, commenting on the trade deficit figures, said that during the year ending March 31, Japan will have increased its shipments of vehicles to the U.S. by 450,000 units at a cost of about 90,000 U.S. jobs.

Bieber said the Commerce Department figures "show that the erosion of this country's trade position now amounts to a national emergency."

Passive restraints returning to court

By Helen Kahn
Washington Bureau Chief

WASHINGTON.—Furthur oral argument along with supplemental briefs in State Farm's challenge to the Transportation Department's passive-restraint rule has been set by the federal appellate court for the District of Columbia.

Supplemental briefs dealing with developments in the states and mandatory-use laws are expected from both sides by Feb. 28, and additional oral argument is set for March 11.

The central issue in the State Farm challenge to the passive-restraint standard is whether it is legal to couple rescission of a vehicle regulation mandating a phase-in of automatic belts or air bags to passage of belt-use laws in states having two-thirds of the nation's population.

A secondary issue is whether DOT acted in accord with proper procedures when the standard was remanded to it by the U.S. Supreme Court. Earlier, the Supreme had overruled an attempted rescission of the standard by former NHTSA chief Raymond A. Peck. The court was responding to an earlier challenge by State Farm.

Attorney James Fitzpatrick, representing State Farm and others, said he welcomed the upcoming oral arguments as a way to make clear to the court that states want both passive restraints and belt use-laws and to get action from Transportation Secretary Elizabeth H. Dole. So far, Dole has refused to rule whether state laws meet the minimum federal criteria set forth in the standard she announced in July, 1984.

That standard—208—requires auto makers to phase-in passive protection: 10 percent for 1987 models, 25 percent for 1988 models, 40 percent by 1989 models and 100 percent by 1990 models. But rescission of the federal regulation is automatic if by April 1, 1989, states with two-thirds of the nation's population have passed appropriate belt-use laws.

In several letters, Fitzpatrick has urged Dole to rule on whether state laws meet federal criteria. Meanwhile, Rep. John Dingell, Michigan Democrat, who has petitioned for changes in almost all the federal criteria, has been urging Dole not to make any such ruling and, in fact, to give only the most careful advice to states lest she restrict her options for changing the criteria.

Said Dingell in his latest epistle: "Giving advice that assumes that the criteria are permanent may be misleading to the states. Just as importantly, DOT should learn from the actions of the states . . . Again, Washington is not all knowing."

Dole—although promising a decision "shortly" on a December TV show—has carefully avoided doing anything. DOT's official position is not to certify any state laws until the D.C. circuit court has ruled since the major focus of the legal challenge concerns state belt-use laws.

Now, with the issue due for briefing by all parties and queries by appellate judges, Fitzpatrick hopes Dole will be forced to make some ruling lest the government be accused of changing the rules in the middle of the game.

State Farm's position is that DOT failed to show that state laws which do not have to be enforced and, indeed, may be revoked are an effective substitute for passive restraints in vehicles and that DOT could have used state laws to supplement passive protection rather than replace it.

So far, the states that have passed laws speak for about 50 percent of the population. Sixteen states and the District of Columbia have passed mandatory-belt-use laws.

New York—whose belt use law was passed before Standard 208 was made final—has joined State Farm in the pending litigation. Gov. Mario Cuomo has petitioned NHTSA for exemption from the standard and for a ruling on the status of the New York law which the state is reluctant to strengthen lest it endanger the future of passive restraints.

New Mexico also has come in on the side of State Farm and others who are challenging DOT.

State Farm and others challenging the standard insist that none of the 17 state laws meet federal criteria. For example, California's law becomes inoperative if DOT rescinds the passive-restraint mandate because of state laws; Hawaii says its law must not be used to rescind passive restraints.

Massachusetts' law requires that all 1990 vehicles have an "an occupant crash protection device" and that its law not be interpreted as rescinding automatic protection. On the other hand, Michigan's law will self-destruct if DOT requires passive protection systems.

Missouri declares its law null and void if enough laws meeting federal criteria are not enacted by April 1, 1989. North Carolina's law becomes ineffective if it is found not to meet the federal criteria needed to be counted to wipe out passive restraints.

The 11 other states with mandatory-use laws are Connecticut, Illinois, Indiana, Louisiana, Nebraska, New Jersey, New Mexico, New York, Oklahoma, Texas and the District of Columbia. There may well be problems with the final federal criteria in some of those states, too.

Cadillac dealer buys 51 pct. of Excalibur

By Richard Johnson
Detroit Reporter

Excalibur Automobile Corp., the cash-strapped Milwaukee-area neo-classic maker, has reached an agreement to sell a majority interest in the firm pending approval of U.S. Bankruptcy Court.

R.V. Robinson, an Atlanta Cadillac dealer, signed an agreement last week to acquire 51 percent of the company as an equity stock purchase. The remaining 49 percent will be retained by current owners and co-founders David and William Stevens, who will continue to operate the 21-year-old business.

William Stevens late last week declined to reveal the purchase price before reviewing the matter with his attorney.

He said the various stages of creditor review mean the deal won't be completed until at least May.

Citing cash-flow problems, Excalibur filed for reorganization under Chapter 11 of federal bankruptcy laws last fall. Excalibur has maintained production since petitioning for protection from creditors.

However, Stevens said, operations have "slowed" in recent weeks because of a cash shortage and model changeover.

Stevens said one of the first orders of business for the restructured company will be expansion of its product line.

Excalibur now builds the Series V Phaeton and Roadster models and plans to unveil a two-door sedan at this week's Chicago Auto Show. A four-door sedan version and a limousine are reportedly coming later this year.

Mini-computers for Pontiac field sales personnel

And now—the paperless briefcase

PONTIAC.—At General Motors, one currently hears a lot about the coming of the paperless office—the day when computer data bases in every GM division will make dinosaurs out of the filing cabinets.

While that day may be fast approaching, Pontiac has already pioneered what will be of more immediate benefit to its people who spend more of their time on the road than in the offices. For its sales force, Pontiac is introducing what might be called the paperless briefcase.

That high-tech briefcase is actually a small computer which forms the basis of the Pontiac Field Communication System.

Designed to make district sales, service and fleet managers more effective in the field, the system's ultimate objective is service and complete customer satisfaction.

"As far as receiving information," said Joe Thompson, manager of Pontiac's sales communication section, "district managers are always relying either on telephone conversations or, worse yet, letters—which of course put them two to three days behind the facts.

"Using a terminal, printer and telephone hookup (all of which can fit into a small suitcase under a plane seat), the sales person on the road can have access to information that is updated nightly," Thompson said.

The new system was the result of brainstorming between the sales communication staff and GM's newly acquired subsidiary, Electronic Data Systems late in 1984.

Pontiac sales people decided what kinds of information would make field personnel more effective, and the EDS people came up with the right software programs to make those ideas reality.

Already available are daily sales reports and current distribution and owner-relations information. On-line access to vehicle production, history and car locator files makes it convenient to retrieve specific pieces of data.

The district managers have also created internal programs for searching through files as well as spreadsheet and telecommunications programs.

Thompson said this is the sort of information that Pontiac personnel must have to help customers and dealerships resolve concerns quickly and effectively. By hooking up the computer to a telephone, a Pontiac representative can, for instance, pull up the warranty history for any Pontiac sold between 1982 and the previous day.

For a district manager, that information is essential in order to make objective decisions for customer assistance.

Customer problems at particular dealerships are going to be easier to resolve, Thompson predicted, when a district manager can pull up a history of customer comments on his computer and look for a pattern of buyer dissatisfaction or poor dealer performance.

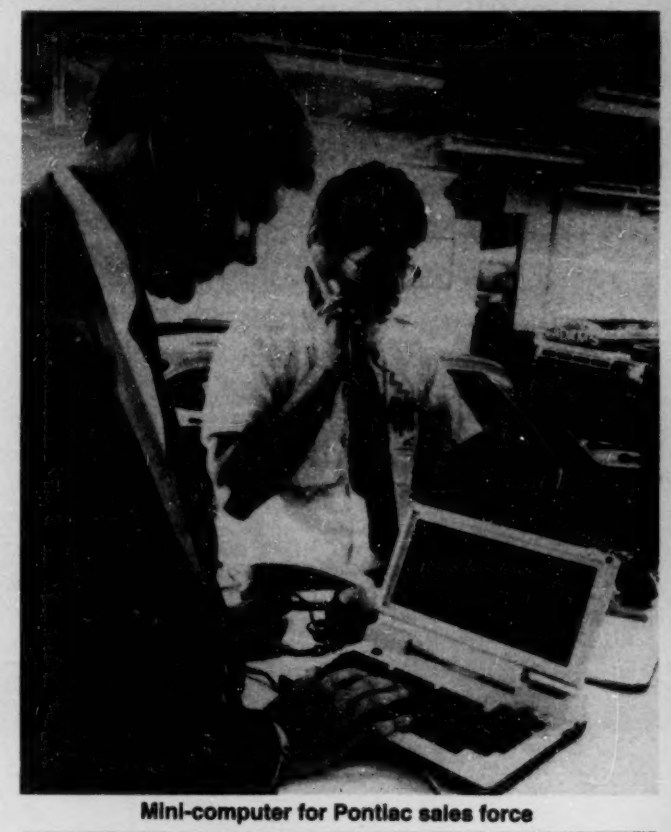
Having Pontiac zone representatives use the mini-computers to provide local sales trends and up-to-date distribution information are obvious benefits as well, said Thompson.

The portable computers are also helping the 15 regional fleet managers in their dealings with corporate fleet customers, he said.

"During a meeting with a prospective customer, it's quite an advantage to take out the computer and produce price comparisons between a Pontiac 6000 and seven other competitive models."

Thompson and his colleagues from Pontiac's headquarters in Michigan will be visiting all of the division's 26 sales zones around the country until March.

By then, he hopes, Pontiac district managers would sooner leave home without their credit cards than without their paperless briefcases.



Mini-computer for Pontiac sales force

Here's A Proven Way To
RAISE YOUR CSI

The Gift Connection has been called *The most effective follow-up program in the automotive industry.* Let us show you how to:

- lower your cost of sale
- generate referrals
- create positive word of mouth advertising
- raise your CSI

"Thanks to The Gift Connection, our CSI sales points went from 70 to 90."

Even if you currently use a follow-up program, you owe it to yourself and your dealership to use The Gift Connection at NADA Booth 316 or Call Toll Free

Environmentalists sue EPA; seek curbs on 8 pollutants

NEW YORK.—In a suit filed in Federal District Court here, the Natural Resources Defense Council has charged EPA with failing to curb eight cancer-causing air pollutants.

The environmental group, which has been notably successful in litigation, wants a court-ordered schedule to require EPA to list eight pollutants as "hazardous," thus forcing EPA to set emission-control regulations.

Inciuded among the eight are two metals—cadmium and chromium, small amounts of which are used in the manufacture of cars—and six organic chemicals including butadiene (used in synthetic rubber), acrylonitrile (used in plastics and acrylic fibers) and ethylene dichloride (used as an additive to leaded gasoline and as a feedstock for vinyl chloride).

Last year, EPA labeled each of those compounds as either a "known" or "probable" human carcinogen. Emission-limiting regulations are estimated to be at least four years in the future.

David Doniger, a senior attorney for NRDC, said that under the law, EPA must list them as "hazardous air pollutants" and then issue emission standards with an ample safety margin within one year.

Except for acrylonitrile, EPA has merely said it "intends" to limit emissions but does not when or how.

As for acrylonitrile, EPA said emissions should be limited but would leave it to the states and even remove itself if the states decide not to take action. State pollution officials have criticized EPA's acrylonitrile decision.

NRDC said that toxic pollution is a national problem and leaving such hazardous pollutants to state control "was rejected 15 years ago."

Doniger added: "EPA's approach will revive destructive competitive pressures between states. Citizens should never be forced to sacrifice their health for fear of hurting their state's business climate."

November registrations dip 5 pct. as domestics fade

By Jenny L. King
Detroit Reporter

New-car registrations for November were down 5.31 percent from the same month a year earlier. They plummeted 20.54 percent from October, 1985.

Table on Page 168

November domestic registrations were off 16.06 percent, to 510,303 from 607,933.

Imports claimed an additional 8.44 percentage points in November, compared with a year ago, as they climbed to 33.98 percent from 25.54 percent. The total of 262,739 was up 26.03 percent from 208,481.

According to registration numbers gathered by R.L. Polk & Co., the November tally of imports plus domestics was 773,042. The preceding year, it was 816,414. The total for October, 1985, was 972,928. Except for 1984, the November sum was the best since 1978 when registrations numbered 825,525.

Eleven-month registrations reached 9,984,971, up 7.42 percent from 9,295,510 in 1984. Domestics were up 4.17 percent, to 7,288,901 from 6,997,389. Imports were up 17.32 percent, to 2,696,070 from 2,298,121. Their share of the market expanded to 27.00 percent from 24.72 percent.

By market classes, the November market was divided in this fashion: Imports, 33.98 percent; intermediates, 25.38 percent; compacts, 14.83 percent; subcompacts, 10.25 percent; luxury models, 8.42 percent, and standards at 7.14 percent.

A year earlier, it was imports, 25.54 percent; intermediates, 25.06 percent; compacts, 17.92 percent; subcompacts, 12.22 percent; standards, 10.30 percent, and luxury cars, 8.96 percent.

Excluding imports, the November market was dominated by intermediates which cornered 38.44 percent of the total. They were followed by compacts at 22.47 percent, subcompacts at 15.52 percent, standards at 10.81 percent and luxuries at 12.76 percent.

Bigler retires

HARRISBURG, Pa.—Robert Bigler, vice president on the executive staff of the Pennsylvania Automotive Assn. and an employe of PAA for 38 years, has retired. He was director of the PAA title and tag service.

Automotive News analysis of new-car registrations based on R.L. Polk & Co. statistical report. New York, Oklahoma for 1984 and Oklahoma for 1985 from manufacturers' sales records.

One began in 1913

Delaware deals top 60 years

WILMINGTON, Del.—Three new-car dealerships in Delaware—each family oriented—have been in business for 60 years or more.

Among the oldest auto dealerships in the state are Stapleford's Chevrolet-Oldsmobile, St. Georges; Frank W. Diver, Inc., a General Motors dealership here, and Porter Chevrolet, Newark.

Stapleford's Chevrolet-Oldsmobile is probably the oldest auto dealership in Delaware. Started by Norman B. Stapleford in 1913 in Delaware City and moved to St. Georges in the 1920s, the dealership changed locations several times within that area. It has been at its present location since 1948.

Charles E. Stapleford Sr., son of the founder, operates Stapleford's with his wife, Alice, and two sons, Charles Jr. and Richard.

For the 72 years Stapleford's has been in business, it's been a family deal, and it will continue to operate as a family-run business for another generation.

Another family-run dealership, in operation since 1915, is Frank W. Diver, Inc. Frank W. Diver Sr. started his dealership, selling Franklins. Clifford P. Diver, his son and the current owner, then began selling Packards and Studebakers after World War I.

Diver's moved to its present location here in 1937, and since 1952, the dealership has been selling GM cars.

Today, the firm is operated by three Diver brothers—Clifford, Frank Jr. and Richard—and the next generation of sons is ready to take over.

Porter Chevrolet has been in operation since 1925. It is the last of three dealerships that were originally operated by John F. Porter Sr. He established his first dealership, Wilmington Auto Sales, in that city, and then moved to two other locations there. The Newark dealership was opened in the 1940s as Newark Auto Sales.

Richard C. Porter II is the current owner of Porter Chevrolet and president of William H. Porter, Inc. When John F. Porter Sr. died in 1952, his two sons, John Jr. and William H., took over the business.

John Jr. operated the two Wilmington dealerships, which have since been sold, while William H. took over the Newark dealership.

The first dealer law in Delaware went into effect on April 14, 1907. That law created a "dealer's class," in which the owner had to pay a $3 registration fee for a license. In 1907, only seven car dealerships were registered in Delaware.

According to C. Russell McCabe, archivist at the State Bureau of Archives and Records Management, many of the earlier car dealers were hardware-store owners or other businessmen who sold cars on the side. Auto dealers were not listed by the state in a separate category until Jan. 1, 1916.

Mazda unit to supply computer software

HIROSHIMA, Japan.—Mazda Motor Corp. has established a subsidiary here, Mazda C & T Co., to develop and sell computer software in response to the growing needs of companies associated with the auto firm.

Mazda owns 60 percent of the new company, and three other firms in the Mazda Group own the other 40 percent. The subsidiary also will market computers and other information-processing equipment supplied by NEC Corp., of Tokyo.

Armstrong's 25th

Dan H. Armstrong, right, Armstrong Buick, Inc., Gladstone, Ore., receives his 25-year-dealer award from W.E.L. Powell, Buick's Portland zone manager.

Bumper-damage cost studied in laboratory, real world

WASHINGTON.—NHTSA said that when it compared the levels of damage repair costs from laboratory bumper tests with the costs of insurance accident repairs, it found a general relationship to exist for only two of the four groups of test models studied.

NHTSA used 23 1983 and 1984 models to compare real-world accident-repair data from low-speed bumper-involved front and rear accidents.

The agency found noteworthy two aspects of the paper which was presented in Detroit in December at a meeting sponsored by the Insurance Institute for Highway Safety and the MVMA.

Those were that sometimes cars that had the most damage in the lab test also had the most damage in the real world; the other was that the inconsistencies in the real-world data are of such magnitude as to offset the variation seen between the real-world and the laboratory data.

NHTSA wants written comments on its technical paper no later than Feb. 24. It also wants advice on how to go about setting up a bumper rating system—first mandated by Congress in a 1972 law.

The agency also wants information about:

1. How the marketplace has affected the types of current bumpers available.

2. Whether a real-world data base could be developed to determine accurately the correlation between lab data and real life.

The queen, her court, the pace car

The 1986 Tournament of Roses Queen and her court try out the pace car used in the New Year's Day parade in Pasadena, Calif. The car is a 1986 Oldsmobile Cutlass Ciera custom convertible by Car Craft Co., Lima, O. Queen Aimee Lynn Richelieu is at the wheel.

Toyota selects Giffels to design U.S. factory

SOUTHFIELD, Mich.—Giffels Associates, Inc., Michigan's largest architectural/engineering firm, has been selected by Toyota Motor Corp. to design the Japanese auto maker's first independently owned and operated auto-assembly plant in the U.S.

The $800-million plant will be built near Georgetown, Ky.

Peugeot faces a full overhaul of image and products in U.S.

By John A. Russell
New York Staff Writer

LYNDHURST, N.J.—Peugeot is on the move again in the U.S and Pascal Hanault, its new executive vice president and chief operating officer, made it clear there will be sweeping changes in the image of the products and the attitudes in the organization.

This revamping will culminate at the end of the decade or slightly sooner with a new model to be added to the 505 lineup, giving Peugeot two model lines in the U.S.

Another problem surfaced for Hanault last week: He must find a new advertising agency. Ogilvy & Mather resigned the account by mutual consent.

In his first interview since he took the helm of Peugeot Motors of America in November, Hanault outlined his strategy. It will focus on image, attitudes, dealers and product.

First and foremost, in light of recent events, Hanault stressed: "Dealers are our first customers" and "I want the dealers to be our strength."

Hanault will be visiting dealers in major markets during the next few months. Then, he will expand his travels to all dealers. It is apparent that the 38-year-old executive is moving quickly to mend fences with his dealers.

Last year, many Peugeot dealers revolted and demanded the resignations of the top executives of PMA. Their anger centered on marketing and distribution of the product.

In November, PMA President Pierre Lemaire announced he would retire in June of this year and he would no longer be the chief operating officer. The reins were handed over to Hanault, who had been assistant director for parts of Automobiles Peugeot in France.

Hanault acted quickly. By mid-January, he had accepted the resignations of James Fitzhenry, general manager for sales and marketing, and Edward Blunt, marketing manager. Fitzhenry's position had been in doubt from the time Lemaire announced his retirement.

Hanault appointed Jean-Phillippe Fournier national marketing manager and John Kubernat, of PMA, interim national sales manager. With that move, he split sales and marketing into two departments. Fournier had been head of the commercial (sales) department of Automobiles Peugeot in Paris.

Now, Hanault wants the company to "move forward" and quickly. He has already changed the advertising and wants Peugeot to have a performance-competition image in the U.S.

"The image of Peugeot is not established in the U.S.," he said. "We are unknown to some extent."

Advertising now will highlight Peugeot's rally tradition throughout the world. Hanault wants a "dynamic image" for his product. Also in the works are television commercials that will air in the spring in 14 major markets. Hanault said the focus will be similar to that of the print advertising.

He said he wants to bring Peugeot's expertise in competition and technology to the public. The competition pitch will draw attention to Peugeot, and he said the company had to use something to get that public attention quickly.

Peugeot is developing a "performance image" in the U.S. Hanault stressed that he was not talking about being the "top performance car" in the sense of top speed; rather, a product that has speed with ride and handling. His main targets are BMW, Volvo and Audi.

He believes he has a product on which to hang the corporate image—the 505 Turbo with intercooler and 150 HP. For the 1986 model year, he is planning two spring introductions of special edition 505s. There will be a Turbo GL model to be sold "below $16,500" and, toward the end of the spring, another special edition of the sedan and wagon which he declined to describe in detail.

"Our dealers should understand we are committed to the market and have long-range product forecasts to 1990," he said.

Those product plans include the second model line to be positioned as an "up-middle-range car." He stressed that it is not a replacement for the 505. The 505 will be retained.

Hanault did not go into great detail about the new model except to say it will be introduced before the end of the decade. He said it will be priced so that the "low-range 505 and the high-range new model would compete."

Before the end of the decade, the company will introduce anti-lock braking systems, a new V-6 gas engine and a new 2.2-liter engine. More than likely, they will be introduced for the 1987 model year.

Speaking of a projected 20-percent sales gain this year, he said, "We should change the dealer attitude toward PMA and the PMA attitude toward dealers." He said he wants to develop a person-to-person relationship with the dealers.

Visiting dealers will be nothing new for Hanault. In Europe, he spent one or two days each month visiting dealers. He said that each month, he wants to know how dealers perceive the market. He has established guidelines inside PMA. He has made it plain that he is setting the direction and expects those at the company to follow that direction.

In another move, Hanault said the expanded warranty the company announced last May has been extended to all 1985 models. The warranty is three years/36,000 miles and five years/50,000 miles on the powertrain.

It has been a bone of contention among some dealers because customers who purchased earlier were annoyed. Hanault moved fast to change that.

Asked what image Puegeot will have, Hanault said "family-sports sedan" is the identity he wants to carve.

Why family? "Because ours is a four-door with large seats."

But the operative words are sports sedan and performance.

NIADA chooses Tupper for post of executive VP

DALLAS.—Charles F. Tupper, 43, is the new executive vice president of the National Independent Automobile Dealers Assn.

The Dallas attorney, who specializes in the automotive field, assumed the chief paid position with the association Feb. 1.

Tupper succeeds Philip Smith who resigned last June.

Charles F. Tupper

NIADA is headquartered in Raleigh, N.C., but will move to the Dallas area this spring. The association was organized in 1946.

Tupper has as executive vice president of the New Car Dealers Assn. of Metropolitan Dallas and also has been a dealership executive.

Said Tupper, "This position with NIADA provides the opportunity to work with these leaders of the automotive industry on a national scale, to influence the way the industry and the public view the used-car dealer and to work directly with professional state association executives throughout the country."

Officers appointed in Philadelphia

The Automotive Trade Assn. of Greater Philadelphia has elected Jay Dunphy 1986 president. Seated are Joseph Faulkner, left, vice president, and Dunphy. Standing, from left, are: Darrell Gordon, secretary; Bert Parrish, executive director, and John Lindsay, treasurer.

Chrysler Jefferson workers authorize concessions pact

By Mary Connelly
Detroit Reporter

UAW workers at Chrysler Corp.'s Jefferson Avenue assembly plant have authorized the union to negotiate a concessionary local agreement in attempt to save jobs after the 1987 model year.

The UAW said last Thursday (Jan. 30) Chrysler had not yet indicated what it would require from the union if the company decided to renovate or replace the aging plant. Jefferson assembles compact Plymouth Reliant and Dodge Aries models, and Chrysler has said it has no product plan for the plant after the 1987 model year.

Members of UAW Local 7 unanimously agreed Jan. 26 to try to negotiate a contract that would preserve jobs at Jefferson, the UAW said. Any such agreement would have to be voted on by the local membership.

Union and Chrysler officials have been meeting to reach a local agreement following ratification of a three-year national contract in October.

Concessions would not include items such as wages and benefits covered in the national agreement, the UAW said.

Instead, any negotiations are likely to center on changes in work rules and job classifications.

Chrysler is currently seeking streamlined labor agreements with fewer job classifications and simplified work rules at its plants, including Jefferson. The company maintains the changes will increase flexibility and productivity.

The City of Detroit has also been involved in talks with Chrysler regarding possible economic incentives and has reportedly offered to make available more than $200 million in city, state and federal assistance as part of a massive plant redevelopment.

"Chrysler may be waiting to see what the state is going to do since they have input already from the union and the city," said one UAW representative.

Chrysler Motors President Harold K. Sperlich said recently that discussions are continuing with union, city and state officials.

"The UAW has been able to save those jobs in the past," a union spokesman said. "In the 1970s, they were talking about closing Jefferson."

"A closing would have a great impact on the Detroit area if those jobs go down the drain."

There are 4,800 persons employed at the Jefferson plant.

More Yugos slated for U.S.

By John A. Russell
New York Staff Writer

NEW YORK.—Yugo America announced that Zastava, the Yugoslavian manufacturer, has added a new assembly line to produce additional Yugo cars for the U.S. market.

William Prior, president of Yugo America, said the manufacturer has discontinued its 750 model and that production capacity is being used to produce cars for the U.S. Zastava expects that production to begin in April.

In addition, he said, the Zastava body plant has been reorganized for Yugo GV production. That includes new robotic systems for door assembly.

Prior also announced that Srba Vasovic, general manager of the Zastava factory, has been elected to the Yugo America board of directors.

Yugo America, Prior said, now has 160 dealers and expects to have 240 by late summer. He announced the appointment of 18 dealers in the West. Fifteen of those are in California, two in Arizona and one in Oregon.

The California dealerships are:

Almaden Toyota, San Jose; Bob Stall Chevrolet, San Diego; Burgess Honda, Dale City; Cerritos Ford, Cerritos; Clippinger Chevrolet, Covina; Cormier Chevrolet, Long Beach; Crossroads Chrysler-Mazda, North Hollywood, and Freeway Ford, Los Angeles.

Also in California: Hawthorne Mazda, Hawthorne; Humphrey Motors, Hayward; Irvine Toyota, Irvine; Key Chevrolet, Cupertino; McAllister Cadillac, Whittier; Ogner Porsche-Audi, Woodland Hills, and Quaid Imports, Riverdale.

The Arizona dealerships are Sands Chevrolet, Glendale, and Bob Lewis Porsche-Audi, Tucson.

In Oregon the company appointed Ron Tonkin Chevrolet in Portland.

Japan builds 12.2 million; world's best

TOKYO.—Production of vehicles by Japanese auto makers reached record highs for both 1985 and the month of December, according to the Japan Automobile Manufacturers Assn. (JAMA).

JAMA said the auto companies produced a record 12,271,083 vehicles in 1985, an increase of 7.0 percent, to surpass second-place U.S. for the sixth consecutive year.

Preliminary figures showed 11,487,481 cars and trucks produced in the U.S. in 1985.

According to JAMA, Japanese car output in 1985 climbed 8.1 percent to 7,646,816 units, while trucks totaled 4,544,698, up 5.2 percent, and buses increased 10.2 percent to 79,569 units over the year-ago total.

Preliminary U.S. figures showed that the U.S. topped Japan in car production with 8,182,084, but trailed in trucks with 3,305,397.

JAMA attributed the 1985 production gains to higher exports, especially those to the U.S. and China. Although exports to China are declining now, the levels were high early in the year, the association said. Shipments to the U.S. began spiraling last April, when the Japanese Government relaxed export restrictions.

December's production, JAMA said, totaled 1,016,186 units, up 11.4 percent from a year ago to mark the 15th consecutive monthly year-to-year rise. December production included 647,233 cars, up 14.9 percent; 365,488 trucks, up 7.4 percent, and 3,465 buses, up 59.1 percent over the year-ago volume.

Jama said record exports for 1985 totaled an estimated 6.73 million units, an increase of 10 percent, while domestic shipments amounted to 5.5 million, up 2.2 percent, also a new high.

Domestic shipments included 3.10 million cars, up 0.3 percent, while trucks totaled 2.43 million, an increase of 4.7 percent, and buses totaled 21,500 units, an increase of 6.4 percent over the same period the year before.

Export totals for December, to be released later, are expected to show an increase of 12 percent from a year earlier.

Chrysler at work on V-6 engine for use in 1990s

DETROIT.—Chrysler Corp. reportedly is developing a new V-6 engine with plans for introduction in the early 1990s.

The V-6 will power a number of yet-to-be-introduced Chrysler products and will be built in the U.S. A production site is yet to be announced.

No details on the new V-6 have been released. It is likely that it would replace Chrysler's 2.2-liter and 2.5-liter 4-cylinder engines in some upscale applications.

Chrysler recently introduced a V-6 based on its own V-8 for the Dakota pickup. It also has an agreement with Mitsubishi Motors Corp. to buy as many as 450,000 or 500,000 3.0-liter V-6 engines per year from the Japanese firm, starting in mid-model-year 1987 or 1988.

Chrysler is also studying the feasibility of building a wind tunnel at its new Auburn Hills (Mich.) Technical Center.

AMC, VWoA down; car production slips

By Kathy Boyer
Detroit Reporter

With production halted at American Motors and Volkswagen of America last week, domestic auto output fell slightly from the previous week's build.

The makers' estimated output of 173,354 cars last week was down 2.35 percent from the previous week's 177,528.

The prior week's total was the highest of any week since the week ended Dec. 14, when 182,811 cars were assembled.

Last week's estimate was about even with (0.23 percent below) the year-ago week's 173,757.

Companies shared last week's estimated output as follows: General Motors, 57.86 percent; Ford Motor Co., 20.44 percent; Chrysler Corp., 17.42 percent; Honda of America Mfg. Co., 2.16 percent; New United Motor Mfg. Co., 1.10 percent, and Nissan Motor Mfg. Co., U.S.A., 1.02 percent.

As reported earlier, AMC's Kenosha plant was idle last week (Jan. 27) and will also be down this week (Feb. 3) for inventory adjustment.

VWoA's Westmoreland (Pa.) plant was down last week to prepare for slower production-line speeds for the Golf and GTI models.

GM's Bowling Green (Ohio) plant resumes production today (Feb. 3).

The plant had been down since the beginning of the year to prepare for production of the Corvette convertible.

On Jan. 30, Ford resumed production of the EXP at its Wayne (Mich.) plant as the Escort EXP. The EXP had been out of production since February, 1985.

Ford slated Saturday (Feb. 1) overtime at its Atlanta plant.

Chrysler scheduled overtime Saturday at its Newark (Del.) and St. Louis (No. 2) plants.

The same Chrysler plants are slated for daily overtime this week (Feb. 3), along with the Belvidere (Ill.) facility.

'86 Truck output passes 300,000

Year-to-date truck production in the U.S. moved above 300,000 last week and lengthened its lead over the 1985 total for the third consecutive week.

So far this year, 310,973 trucks have been assembled, 4.43 percent more than the 297,791 completed last year at this time.

The estimated output of 71,442 trucks last week was 0.81 percent above the previous week's 70,865 and 1.89 percent more than the year-ago week's 70,120.

Three General Motors plants were scheduled for overtime last Saturday (Feb. 1). They were Janesville, Wis.; St. Louis, and Lordstown, O.

Ford slated overtime Saturday at its Norfolk and St. Louis plants.

Canadian output drops for week

Canadian car makers scheduled production of 20,350 units last week, 2.80 percent below the previous week's 20,937, which was the highest output so far this year.

Last week's build was almost the same as the year-ago week's 20,353.

Truck manufacturers pegged production of 18,716 trucks last week, 1.24 percent below the previous week's 18,951 and 1.69 percent below the year-ago week's 19,038.

American Motors' Brampton (Ont.) plant has been down since Jan. 27 to prepare for Jeep Wrangler production. When the plant resumes production March 3, it will continue to build the AMC Eagle along with the Wrangler, which is also produced in Toledo.

GM shakeup spurs wave of speculation

By Michelle Krebs and John K. Teahen Jr.
Automotive News Staff

The health of a General Motors executive brought major changes in the corporation's hierarchy last week. The changes opened up several new avenues of speculation about who will be the next GM president.

Alexander A. Cunningham, 60, was placed on a disability leave of absence, after which he will retire. No date was given for his retirement. He also has given up his seat on the board of directors.

Cunningham, executive vice president in charge of North American Automotive Operations, suffered a second heart attack in November. He underwent bypass surgery seven years ago following a heart attack. As a result of the heart condition, Cunningham has decided to relinquish his GM duties.

Lloyd E. Reuss

The 38-year GM veteran had been thought to be the heir apparent to the GM presidency, succeeding F. James McDonald, who will be 65 in August, 1987.

Last summer, Cunningham was put in charge of everything on wheels in North America. Truck and bus operations were added to his responsibilities for North American car operations.

Robert C. Stempel

The race for the presidency now seems to have narrowed to Robert C. Stempel and Lloyd E. Reuss, though other executives are not necessarily out of the running.

New jobs for Reuss and Stempel represent a split-up of Cunningham's responsibilities with some additions.

Reuss, 49, becomes a board member and executive vice president in charge of North American Passenger Car Groups. He had been vice president in charge of the Chevrolet-Pontiac-GM of Canada Group (CPC). Before that, he had been Buick general manager.

Stempel, 52, also was appointed to the board and was named executive vice president in charge of the Truck and Bus Group and Overseas Group. Stempel was vice president in charge of the Buick-Oldsmobile-Cadillac Group. He had been general manager of Pontiac and Chevrolet as well as managing director of Adam Opel AG

Buick's NADA reception—a splash with GM dealers and brass

Woulfe, Morsani chart dealer path for future

By John A. Russell
New York Staff Writer

NEW ORLEANS.—Speakers at the closing session of the NADA convention last week—James B. Woulfe, NADA's new president, and Frank Morsani, chairman of the U.S. Chamber of Commerce—addressed ways to ensure the continued strength of the auto industry and the nation's business.

As expected, Woulfe announced that NADA will form a blue-ribbon committee, called Project 2000. He took up the theme sounded by former NADA President William J. Symes at the opening session of the convention—that NADA's mission "is to protect and strengthen the franchise system." (Automotive News, Feb. 3.)

Morsani, an auto dealer from Florida, called auto dealers "America's truest, purest entrepreneurs." He said there are warning signs that the economic recovery in which vigorous enterprise is possible may be interrupted.

He outlined what he termed the 10 imperatives—five for government and five for the private sector—which would "ensure prosperity into the next decade."

Woulfe said that Project 2000's findings will help form NADA strategies in the future and will be "our way to reinforce the franchised dealer role" and remind manufacturers "who their true friends are."

"What Project 2000 is all about is looking at every proposed change to the franchise system and making sure we who represent franchised dealers have a say in it," Woulfe explained.

He promised dealers that NADA will continue to fight fleet subsidies, odometer fraud and the gray market. He termed those "destructive to the franchise system."

He added that the committee

$500 cost saving goal of simpler Omni/Horizon

By Mary Connelly
Detroit Reporter

Chrysler Corp., in a move that could boost sales through productivity gains rather than financial incentives, is trying to reduce manufacturing costs by $500 per car on its Omni and Horizon subcompacts.

The effect of the program would limit the choice of equipment options for Omni and Horizon buyers—and provide manufacturing cost savings that would be passed on to consumers.

An announcement of the changes could come as early as Thursday. In the last month, the changes have been outlined for union officials and some major dealers.

One union official who participated in talks in mid-January said tentative plans then called for Chrysler to begin offering simplified option packages.

William Campbell, financial secretary and treasurer of UAW Local 1268, said that limiting the number of buyer choices would allow Chrysler to reduce the manufacturing cost of Omni and Horizon. Campbell's local represents workers at Chrysler's Belvidere (Ill.) assembly plant, where the subcompacts are produced.

Chrysler would not comment on Campbell's report. But sources inside Chrysler said the company was working hard to bring the price of Omni and Horizon into the $5,700-range, a drop of about $500 from the current sticker price.

Omni and Horizon currently have a base price of $6,209. Chrysler's $500 cost-saving target is comparable in value to current financing incentives, which expire later this month. If the manufacturing cost savings could be achieved, they would allow Chrysler to give consumers the same value as today after the incentives expire, or a greater savings if the incentives are renewed.

In a statement last week, Chrysler acknowledged it was "evaluating ways to reduce costs, especially on subcompact models, which face growing competition. We are generally trying to achieve with manufacturing cost reductions what we are now doing with incentives."

Chrysler's move comes at a time when competition in the subcompact market is intensifying. The South Korean Hyundai Excel is

Car sales set record in Europe

By Richard Feast
European Editor

LONDON.—New-car sales in Western Europe last year almost certainly reached a new high.

At just under 10.6 million units, the total was up 4.3 percent from the previous year and very slightly above the previous peak of around 10.55 million in 1979.

Those early indications, from country associations and company sources, confirm that the Volkswagen-Audi group was the market leader for the first time with 12.9 percent.

The West German maker held the lead for most of the year and finished comfortably ahead—in European terms—of Fiat Auto (12.3 percent), Ford (11.9 percent), Peugeot SA (11.5 percent), General Motors (11.4 percent) and Renault (10.7 percent).

The definitive figures will not be known for several weeks, but year-end statistics from three of the four major markets (West Germany, the U.K. and France) and several others have been confirmed. There may be some minor changes when the counting finally stops, but the record year and VW's No. 1 position seem set to stand.

The high general demand for

Late News

GM's Smith sees 15 million sales

CHICAGO.—General Motors Chairman Roger B. Smith, calling the 1985 alltime sales record of 15.7 million vehicles "a very tough act to follow," predicted that in 1986 the "industry could sell more than 15 million vehicles—especially with the right actions in Washington on CAFE and effective follow-through on the budget and trade deficits." Smith spoke at a luncheon marking the opening of the Chicago Auto Show.

Spelling lesson

CHICAGO.—Chevrolet General Manager Robert Burger held a brief spelling session during the division's press conference at the Chicago Auto Show last week. Speaking in the elegant Drake Hotel, Burger said the new two-door sport coupe is the Beretta (not Baretta), and the companion four-door is the Corsica. "They are even more exciting in the flesh than they are in the spy photos I keep seeing," he quipped.

NEWSPAPER

Air-bag use seems near at Porsche

WASHINGTON.—Porsche is tilting toward including passenger-side air bags along with driver-only air bags on the Porsche 944.

Although Porsche has not set a date to install the air bags, it wants a quick answer from NHTSA on whether doing so will be worth two vehicle credits to count as part of the phase-in requirement of the passive-restraint standard.

The company is being supported by the Insurance Institute for Highway Safety, which considers it a way to encourage use of air bags instead of automatic belts. IIHS also supported Ford's earlier and successful petition to gain 1.5 vehicle credit for its driver-only air-bagged cars.

In its petitions, Porsche said passenger-side air bags offer greater protection than passive belts "especially in light of the general discomfort, inconvenience and obstructions created by automatic belts." Porsche asked NHTSA for expedited consideration in view of the "extensive" leadtime needed.

Porsche said that granting extra credit will encourage development since there could be three years of practical experience with air bags before passive restraints are mandated across the board—or at least until they are automatically rescinded because of passage of state belt-use laws covering two-thirds of the nation's population.

Chevy, Pontiac offer incentives on big rwd cars

Chevrolet and Pontiac began a round of incentives Feb. 1 on their big, rear-drive cars.

At Pontiac, dealers are reimbursed their wholesale cost of $615 for free air conditioning on each Parisienne delivered during February, March and April. Demos will not be included, but the cash incentive does apply to units already in stock as well as those ordered.

At Chevrolet, Caprice and Impala get incentives, divided $125 to the salesman, $25 to the sales manager and $100 to the dealer.

Both models have been overstocked since November. They were not included in the low-interest rate incentives launched by GM Dec. 26. GM said those incentives, which expire Feb. 22, would emphasize its four-cylinder models to improve its Corporate Average Fuel Economy rating.

Pontiac plans to end Parisienne sedan production in mid-year; the wagon will remain in production along with the full-size Chevrolet sedans and wagons.

Hatchback Corsica for '88

Jim Dunne/Popular Mechanics

Chevrolet is slated to get the mid-sized L-bodied Corsica late this year as a 1987 model, but it will wait until 1988 to introduce the hatchback version, snapped here.

Political furor quashes Ford-Austin Rover deal

By Richard Feast
European Editor

LONDON.—Political furor erupted last week when the U.K. Government suggested selling BL's Austin Rover Group (ARG) to Ford and confirmed that a General Motors' takeover of the state-owned company's Leyland Trucks and Land Rover divisions is close.

The revelations caused such a terrific backlash from the politicians—and not just from opposition Members of Parliament—that the government executed a rare U-turn.

Ford is not to buy ARG after all, although it looks as though the GM purchase will go through.

The one concrete aspect to emerge from a very confusing and politically heated few days is that For Sale notices have been pasted on all assets of the BL organization.

The philosophy is not new, but the Conservative government under Prime Minister Margaret Thatcher has added a new urgency to the job. It wants it done before the next election, either next year or in early 1988.

That was underlined when Trade and Industry Secretary Paul Channon confirmed that talks about the sale of Leyland/Land Rover are at an advanced stage (Automotive News, Jan. 27).

Channon also said separate discussions are taking place for the sale of Leyland Bus operations to the Laird Group, the U.K.-based owner of bus maker Metro-Cammell-Weymann.

Those moves will leave ARG as the only constituent of BL. The government naturally turned to Ford, the country's market leader and a substantial vehicle producer here. Even before the political jingoism prompted cancellation of the talks, it was difficult to see just what Ford would have gained from a purchase of ARG.

Ford already outsells ARG in the U.K.—485,000 to 328,000 last year—and has always complained that inefficiencies at its Dagenham and Halewood plants in the country mean under-utilized capacity. In the rest of Europe, Ford outsells ARG by more than eight to one, and in the U.S., ARG is only just putting together a distribution system to sell the Sterling sedan beginning early next year.

For more than two years Ford has steadily been reducing its head count and lowering its European breakeven to provide the parent with a better return on investment. To have taken on Austin Rover at this stage would have been to move in the opposite direction of recent events.

The American multinationals, GM and Ford, were being portrayed as the bogeymen of the piece here last week.

The apparent willingness of Honda to buy 10 percent of Austin Rover, with whom it has product development and production links, was not widely known in the U.K. last week. But if companies which have been major vehicle makers in the U.K. for 50 years (GM) and 75 years (Ford) are being given a hard time, a Japanese company's interest in ARG is likely to be greeted with even greater animosity.

Given the government's determination to rid itself of ARG and recent events, it is difficult to understand the company's longterm future. Self-interested parties do not want it sold to an overseas group; it is too big to be taken over by a local component supplier, even a Lucas or GKN; its financial record prevents management raising money to buy it and, for the same reason, it is unlikely to prove attractive enough to institutional investors if launched on the stock market.

Honda eying stake in Austin Rover

TOKYO.—Honda Motor Co. reportedly will acquire a 10-percent interest in Austin Rover, the car division of BL, the British-Government-owned auto manufacturer.

According to reports published here, negotiations between the two firms are expected to be completed by the end of April. Honda already is developing cars with Austin Rover.

Domestic sales up; imports set record

By Jenny L. King
Detroit Reporter

Retail deliveries of new domestic cars in January inched up one percent above a year ago to the best total for the month since 1979.

Sales of imported cars were a record, making January the ninth consecutive month in a series of "bests" which began last May. Imports claimed 27.18 percent of a relatively strong market, up from the last few years but well below record penetration of 31.08 percent in 1982.

Domestic sales in January numbered 635,904, up 1.25 percent from 628,037 a year earlier, but short of the 644,536 reported back in 1979. The tiny increase over 1985 indicated that the current financing incentives helped—but not much.

Imports numbered 237,351, up 14.60 percent from 207,115.

Combined sales of 873,255 were up 4.56 percent from 835,152 in January, 1985.

The domestic sales gain was achieved on the strength of General Motors' 3.74-percent increase. Ford Motor Co. narrowly missed its year-ago mark and Chrysler Motors was down 8.29 percent.

GM reported sales of 376,353 units, up some 13,000 from 362,780 in 1985. Ford sales added to 149,380, down 0.92 percent from 150,762. Chrysler dropped 8.29 percent, to 78,195 domestics from 85,260 the preceding year.

Honda was off 0.77 percent, to 13,263 from 13,366.

The other three makers were all in the 6,000 range. American Motors, at 6,389, was down 36.03 percent from 9,987. Volkswagen, at 6,321, was up 7.46 percent from

GM seeks more Japan cars

TOKYO.-General Motors has asked the Ministry of International Trade and Industry (MITI) to increase car export quotas to the U.S. for both Isuzu Motors, Ltd., and Suzuki Motor Co.

According to Henry V. Leonard, GM's top official here, GM asked MITI to raise Isuzu's quota of car shipments to the U.S. to 200,000 units and Suzuki's to 100,000 for fiscal 1986, which begins April 1. The limits for fiscal 1985 are 120,000 for Isuzu and 60,000 for Suzuki.

Chevrolet dealers in the U.S. sell the Isuzu Spectrum and the Suzuki Sprint.

The request to the Japanese Government came amid a growing public clamor by labor leaders and members of Congress for Japan to extend its voluntary export quota of 2.3 million cars to the U.S. beyond the March 31 expiration date so that the U.S. trade deficit with Japan will not exceed last year's $49.5 billion.

Leonard said the request was made when a GM executive attended a meeting of Isuzu shareholders here in late January. He said it was pointed out to MITI that GM's original contract with Isuzu called for 200,000 units a year, but restraints have held the number below that level.

Leonard said Chevrolet dealers have a low inventory of cars exported by Isuzu and are in dire need of more cars. However, Automotive News reported that Chevrolet dealers had an 89-day supply of the Suzuki Sprint and a 191-day supply of the Isuzu Spectrum on Jan. 1.

GM owns 34.2 percent of Isuzu and about 5 percent of Suzuki. Isuzu also markets cars in the U.S. though its subsidiary, American Isuzu Motors.

According to reports, GM made the request because it believes it needs to obtain more Isuzu cars in order to compete with other Japanese auto makers' subcompacts in the American market.

Blake bails out of Avanti

By Edward Lapham
Marketing Editor

Stephen H. Blake, Avanti Motor Corp. president and chief executive, resigned last week following the breakdown of refinancing negotiations.

He was replaced by Robert E. Smith, who had been executive vice president. Terry Arman will remain as chief financial officer.

"I found my Achilles heel," Blake told Automotive News after the company issued a statement. "I decided it was time to get out.

"I resigned because I didn't feel there was anything more I could do."

The company, in Chapter 11 bankruptcy proceedings, had been negotiating with an investor group trying to finalize a reorganization plan.

The failure of those negotiations could well mean the death knell for the South Bend auto maker.

"The failure of this refinancing effort will probably result in Avanti's secured creditor, 1st Source Bank, exercising the remedies available to it under the latest Chapter 11 court order," the company's statement said.

Beleagured Blake

Sources close to the matter said the bank, which is owed between $2.5 million and $3.1 million, could seek to liquidate the assets in order to satisfy its claim.

Avanti said "remaining management has instructed its attorneys to seek a temporary injunction against the bank's efforts in order to assess what has happened as well as explore alternative financing for the company."

Blake told Automotive News last week that there had been "outside interference" in the reorganization negotiations, but he refused to identify the party he believes "interfered."

The company, acquired by an investor group headed by Blake in October, 1982, filed for protection from its creditors under Chapter 11 last June.

As part of the refinancing, Blake had hoped to leave the century-old Indiana plant in favor of a Detroit-area facility, but that fell through.

The company said it was concerned about the position of its unsecured creditors and the State of Indiana loan guarantee, "given the bank's probable intent."

Although Avanti management will continue to seek to refinance the operation, the plant is idle. Employment, in the office and service and parts operation only, is down to fewer than 20 people.

The limited-volume manufacturer has operated as an independent maker for more than two decades, since it was spun off from defunct auto maker Studebaker.

Shakeup at GM spurs speculation

Continued from Page 1

in West Germany.

Cunningham had not been in charge of the Overseas Group. However, it is a growing area with the recent restructuring of European operations and the purchase of a majority interest in Group Lotus, the British engineering and performance-car manufacturing company. In addition, GM is negotiating the purchase of Leyland Vehicles, the truck and bus division of the British Government-owned BL.

Stempel's Opel experience undoubtedly was a factor in his getting the overseas responsibilities. Previously, overseas operations had reported to the GM president.

In other moves, William E. Hoglund, 51, a vice president, was appointed group executive in charge of the BOC Group. Most recently, he had been president of Saturn Corp. Before that, he had been Pontiac general manager, after rising through the Financial Staff ranks.

Robert J. Schultz, 55, a vice president, replaced Reuss at the helm of CPC. He was in charge of the Electrical Components Group and earlier was CPC director of engineering.

Richard G. LeFauve, 51, a vice president, replaced Hoglund at Saturn. He was group director of operations at BOC.

LeFauve becomes the third Saturn president since the corporation's formation a year ago. Hoglund was named president after the death of Joseph J. Sanchez. Sanchez suffered a heart attack three weeks after he was appointed to the Saturn job.

Schultz and LeFauve are two fast-rising executives. Schultz has had three major promotions in the past year; LeFauve has had two.

E. Michael Mutchler, 50, was elected a GM vice president and was placed in charge of the Electrical Components Group, replacing Schultz. Mutchler was general manager of Rochester Products Division.

Malcolm R. Currie, 59, was elected president of Delco Electronics Corp., a subsidiary of GM Hughes Electronics Corp., the new company formed by the combination of Hughes Aircraft Corp. and GM's Delco Electronics. He is not a GM vice president but remains an executive vice president of Hughes.

GM also named executives to its European coordinating organization.

John F. Smith Jr., 47, a GM vice president, was appointed executive vice president of GM Europe-Passenger Cars in charge of operations and engineering of that newly formed entity. He reports to Ferdinand P. Beickler, newly appointed president of GM Europe. Smith formerly was president and general manager of GM of Canada.

George A. Peapples, 45, was elected a GM vice president and appointed general manager of GM of Canada, replacing Smith. Peapples was group director of strategic business planning at CPC.

Though the race for the GM presidency appears to be between Reuss and Stempel, other names and other factors may come into play before a decision is made.

Reuss and Stempel are young by top-executive standards. Appointing either of them to the presidency in two years would mean GM could have the same president for a decade or more. GM hasn't had a 10-year president since Charles E. Wilson (1941-1953).

GM may well decide to choose a president for an interim period. That's why Cunningham was such a strong candidate before his decision to retire.

Donald J. Atwood, GM executive vice president and president of GM Hughes Electronics Corp., retires two years after McDonald and could be a contender if GM goes the interim route.

Before his GMHE job, Atwood was in charge of GM's Truck and Bus Group, Power Products and Defense Operations and Electrical and Mechanical Components Operations. He gave up Truck and Bus, but still has the other duties. Atwood, however has held no car jobs and no overseas posts.

There also is the job of vice chairman to consider. The present vice chairman, Howard Kehrl, retires in 1988, a year after McDonald. Whoever is not chosen as president (Stempel or Reuss) could be named vice chairman.

A race between two strong contenders for the president's job is not unprecedented at GM.

On at least one such occasion, the competition had an unexpected aftermath. In 1967, Edward N. Cole and Semon E. (Bunkie) Knudsen were vying for the job. Cole won and Knudsen quit. He went to Ford Motor Co. as president and was fired 20 months later by Henry Ford II because "things just didn't work out." But that's another story.

In 1974, the candidates were Elliott M. (Pete) Estes and Richard L. Terrell. Estes was chosen, and Terrell became vice chairman. Terrell stayed with GM.

And GM doesn't always pick the media-anointed president. In 1958, there was little doubt that Louis Clifford Goad would succeed Harlow H. Curtice. Little doubt, that is, except in the GM boardroom. John F. Gordon, a relatively unknown vice president, got the job and served with distinction for seven years.

Maybe Hoglund is today's Jack Gordon. He has financial and operating experience. As president, he'd be skipping over two current superiors, Reuss and Stempel, but it does happen.

And John Smith is a name to place in the future book. His 'lineage' is excellent—Chairman Roger and Executive Vice President F. Alan, although he is not related to either of those Smiths. He'll be moving up, although he's probably one generation away from the very top.

With his finance and operations background, John Smith is a strong candidate for either president or chairman some day. He'd be an interesting choice as chairman—three Smiths in a row. F. Alan is the odds-on favorite to succeed Roger in 1990.

A. A. Cunningham

scheduled to go on sale in the U.S. for $4,995 this month, and Hyundai has said it expects to sell 100,000 cars this year.

Campbell said the Omni-Horizon changes were designed to allow increased production volumes and permit higher turnover rates in dealer showrooms.

"They're planning a high-velocity vehicle," Campbell said. He added, however, that the plans outlined at the meeting were tentative.

The company stressed last week that it would not "resort to a no-frills car" to compete with low-cost imports such as the Excel.

"Chrysler is committed to offering well-equipped models and will not resort to a no-frills car to gain a price advantage," the company said.

For several months, Chrysler has been studying methods of simplifying manufacturing and reducing production costs.

Chrysler may make an announcement regarding its competitive plans in the subcompact market Thursday when Chairman Lee A. Iacocca reports 1985 earnings.

The program was detailed to union officials during meetings regarding the future of the Belvidere assembly plant.

On Jan. 14, the company and UAW Local 1268 reached agreement on a local contract at the plant which "resolved open issues presented by the union and management," Chrysler said.

As part of that agreement, Chrysler Motors President Harold K. Sperlich said the company would produce its planned C-body models at the plant if the union agreed within 90 days to a progressive labor agreement patterned after the contract at its Sterling Heights (Mich.) plant.

The C-body is a full-size, front-wheel-drive luxury car. Chrysler has not said when the C-body will go into production. Nor has it announced when it will end production of the L-body Omni and Horizon models at Belvidere.

The future of the Belvidere plant, which employes 4,000, has been uncertain. Chrysler has sought financial help from state government and a new agreement from workers to keep the plant operating.

Car sales in Europe crack record in '85

Continued from Page 1

cars across the continent was an unexpected bonus for the industry. Economic factors did not point to a record. Low wage settlements, expensive financing and high unemployment are not the background to a boom in consumer spending.

The fact that it happened in the auto industry can be attributed in large part to the incentive marketing undertaken to counter overcapacity, generally acknowledged to be in excess of 2 million units annually.

Part of that surplus capacity is due to imports from Japan—a factor best illustrated by Japan's 1985 market share of 10.7 percent (a record) compared with the 7.3 percent it had in the similar volume year of 1979. Japan's extra 350,000 sales over the period were at the expense of local producers.

The 1986 outlook is for a total of around 10.9 million, another record. But while on the surface that seems to augur well for the industry, one very senior source pointed out that it was below the market projections being made a few years ago. Then, the long-range forecasts were talking of annual sales in excess of 11 million by the mid-1980s.

Last year, all but two of the continent's 16 reporting nations had sales increases. They ranged from the fiscal-induced boom of nearly 50 percent in Norway to the steady climb back from slump in France, where the improvement was just 0.5 percent. In unit terms, the main increases were in Italy, 111,900; the U.K., 73,800; Norway and Spain, with around 50,000 extra each, and the Netherlands, which was up more than 30,000.

The two deficits were in West Germany (the largest national market) and Switzerland (which echoed many of Germany's environment-induced problems).

But after whopping monthly deficits early in the year, the German market came back steadily as European exhaust emission differences were settled. On a monthly basis, German sales were increasing by the end of the year.

Indeed, the comeback of the German market this year is expected to provide most of Europe's impetus. France and Spain have been slack for some time and could also bolster the anticipated upward swing. However, Italy and the U.K. cannot be expected to contribute much after recent years of high numbers.

It is this German stimulation that should help VW-Audi retain its European lead.

Last year, the company held its own in a German market that was flat, and it rose to the top in Europe on the strength of a dramatic export drive. For the first time, it made more deliveries in Europe outside Germany than within it. Thus, as German market leader, it stands to gain most from any resurgence in the country.

The company's leadership could be strengthened by the pending agreement to take over Spain's Seat. Final agreement on that is expected at VW's supervisory board meeting Feb. 21. If Seat's sales results—1.4 percent of Europe last year—are consolidated into VW's, it will put VW well ahead of any opposition.

Fiat Auto sales went up 0.8 percent to just under 1.3 million last year, or about 70,000 behind VW's 1.37 million.

Third place last year went to Ford of Europe, the market leader in 1984. At first glance the 3.3-percent slip (to 1.26 million) looks poor, but the company reports that profitability has gone in the opposite direction.

Peugeot SA—the Peugeot and Citroen duo—went up 4.5 percent to 1.22 million. It finished marginally ahead of GM (Opel/Vauxhall), which rose 7.5 percent to just over 1.2 million. It was the best result in terms of sales ever achieved by GM in Europe.

Renault volume went up 1.9 percent to a little over 1.13 million. That meant it still lost overall market share, although the slow recovery of the French market and the launch of the new R21 sedan are indicators that the sales decline has bottomed out.

Of the smaller-volume makers, Mercedes-Benz was up more than 20 percent to 398,000 (3.7 percent of the market)—arguably the most impressive performance of any maker in Europe last year.

Austin Rover rose 6.5 percent to 420,000 (3.9-percent market share) and Volvo went up 6.8 percent to 255,000 (2.7-percent share). Two specialist makers lost ground: BMW, down 4.1 percent to 292,000 (2.7-percent share) and Alfa Romeo, off 11.5 percent to 162,000 (1.5-percent share).

Belgium sales peak

BRUSSELS.—New-car sales in Belgium last year were the highest in five years. Registration statistics published by FEBIAC put the total at 359,831, an increase of 2.2 percent over the previous year.

SALES BY COUNTRY

Country	1985	Change from '84
Austria	233,800	+12.7
Belgium/Lux	359,800	+ 2.2
Denmark	157,500	+17.3
Finland	137,400	+ 9.9

Import sales soar to new high

Continued from Page 3

5,882, and Nissan reported sales of 6,003 new U.S.-built Sentras.

GM earned 59.18 percent of the January domestic market, up from 57.76 percent in 1985. Ford had 23.49 percent, down from 24.01 percent. Chrysler slipped to 12.30 percent from 13.57 percent.

AMC earned an even 1.00 percent, down from 1.59 percent; Honda held 2.09 percent compared with 2.13 percent in 1985; VW sales accounted for 0.99 percent, up from 0.94 percent, and Nissan cornered 0.95 percent of this year's market.

The few sales gains among the U.S. makes included January records posted by Oldsmobile and Pontiac. Oldsmobile was up 2.32 percent, to 90,185 from 88,143, while Pontiac dealers went allout with a sales increase of 38.46 percent, to 73,940 from 53,401. Cadillac was up 6.01 percent, Chevrolet dipped 0.45 percent and Buick was down 13.91 percent.

Ford sales were up 1.08 percent only to be offset by a 3.53-percent decline for Mercury and a 9.02-percent drop for Lincoln.

Plymouth was off 1.39 percent, Chrysler dropped 7.55 percent and Dodge was down 14.65 percent.

The record import total included January records for BMW, Honda, Isuzu, Mazda, Mercedes-Benz, Mitsubishi, Saab, Subaru and Volvo.

BMW was up 12.41 percent from last year, Honda was up 3.01 percent, Mazda was up 57.24 percent, Mercedes was up 28.51 percent and Mitsubishi was up 26.55 percent.

Saab sales were up 9.48 percent, Subaru was up 46.83 percent, Toyota was up 5.43 percent and Volvo was up 21.68 percent.

Sales of the Chevrolet Spectrum were up 73.33 percent while Sprint sales were almost triple their year-ago figure. Dodge Colt was up 58.77 percent, and the Plymouth version was up 47.00 percent.

The market-class breakdown included U.S. intermediates at 28.22 percent, imports at 27.18 percent, compacts at 17.05 percent, subcompacts at 13.54 percent, luxuries at 7.61 percent and standard-size models at 6.40 percent.

Without the imports factor, the market was comprised of 38.75 percent intermediates, 23.42 percent compacts, 18.60 percent subcompacts, 10.44 percent luxuries and 8.79 percent standards.

Domestic sales were down 2.53 percent the final 10 days of the month, to 261,702 from 268,500. GM, VW and Honda reported increases while AMC, Chrysler and Ford were down.

GM's gain was just 0.31 percent, VW was up 2.26 percent and Honda was up 13.54 percent. Chrysler dropped 15.36 percent, Ford was down 7.27 percent and AMC was off 8.44 percent.

The Jan. 21-31 market was divided in this manner: GM had 58.21 percent, Ford had 22.81 percent, Chrysler had 12.57 percent, AMC had 1.26 percent, VW had 1.33 percent, Honda had 2.77 percent and Nissan had 1.05 percent.

There were 26 selling days in the month both years, producing daily averages of 24,458 in 1986 and 24,155 in 1985. With 10 days in the final period each year, the averages were 26,170 in 1986 vs. 26,850 in 1985.

Sales in Japan rise 3.3 pct. for January

TOKYO.-January new-vehicle sales in Japan, excluding mini-vehicles, increased 3.3 percent from the year before to 212,885 units.

Of the total, according to the Japan Automobile Dealers Assn., automobile sales rose 3.3 percent to 148,339, the highest for any January, while trucks increased 3.2 percent to 63,667 units and buses climbed 3.7 percent to 879 units.

Toyota's sales set a monthly record of 89,296 units, up 4.0 percent, to account for 42.9 percent of the market, according to the association.

Nissan, the second largest maker, sold 52,937, down 0.7 percent, for 24.9 percent of the market.

The Japan Mini Vehicle Assn. reported that January sales jumped 10.5 percent to 94,651 units, a record for the month.

Nissan to help Daewoo produce vans in Korea

TOKYO.—Nissan Motor Co. announced it has finalized an agreement to provide technical assistance for the production of small commercial vehicles by Daewoo Motor Co., of South Korea, (Automotive News, Jan. 27). Daewoo is 50 percent owned by General Motors.

Under the agreement, Daewoo will start producing vans with its own nameplate based on the Nissan Vanette in the latter half of 1987. Planned rate is 17,000 units per year initially and 30,000 annually after the fourth year.

A Nissan spokesman said eventually some vehicles will be exported, "but we have not worked out the details as to destination, time and volume." Nissan will supply transmissions and brake components for the project and Isuzu Motors, Ltd., in which GM also has a stake, will source the engines.

Because of government regulations, Nissan said, the vehicle will have 90 percent local content.

Nissan said the agreement was "conceived and worked out" in response to a South Korean Government policy—announced in January, 1985—that abolished restrictions on the types of vehicles that may be produced by individual South Korean auto makers.

According to Nissan, the agreement not only enables Daewoo to expand its product lineup, but also provides Nissan with a foothold in the "fast-growing South Korean automotive industry."

Nissan and Daewoo will proceed with the implementation of the pact pending official approval from the South Korean Government.

Where auto market was, January, 1986

Mazda starts first staffing at Flat Rock

Mazda Motor Mfg. USA has announced the start of hiring procedures at its new plant under construction in Flat Rock, Mich.

Initial staffing will include production and maintenance team members and supervisors, the company said.

The procedure is being conducted by mail only. Mazda set a Feb. 15 deadline for application form requests from those who want to be considered for employment during the initial staffing period. Applicants will be subsequently contacted for a series of tests and interviews.

Full-scale hiring will begin this summer and will continue through the plant's scheduled start of production in the fall of 1987, Mazda said. The company anticipates a 3,500-member workforce.

Mazda is building a $450-million, 2.1-million-square-foot assembly facility at the site of the old Ford Michigan Casting center in Flat Rock. At full production, it will produce 240,000 vehicles annually.

Mazda said it will test prospective employes on reading, verbal and mechanical skills because the "working environment will entail learning and performing many job functions, participating in problem-solving activities and actively contributing to the quality and productivity goals of the plant."

Applicants will also be assessed for performance and team membership abilities, the company said.

The Mazda workforce will be represented by the UAW.

Mazda has signed a letter of intent with the UAW defining an interim relationship and providing for union recognition and negotiation of a labor contract. The letter of intent specifies that bargaining will begin within three months of commercial production startup and be completed within six months.

Mazda is expected to build a "626-class" vehicle at the plant. It is pegged by company officials as an "international-sized" car, about the same size as the Honda Accord and slightly smaller than the General Motors A-cars (Automotive News, Nov. 25, 1985).

The plant is expected to reach full capacity by late 1986. Ford Motor Co. will buy about half the output.

GM to lease research space in Detroit area

STERLING HEIGHTS, Mich.—General Motors will be leasing space in a new building in this Detroit suburb to house a research program. The company is releasing no details about the project.

A GM spokesperson said it is a project of the Chevrolet-Pontiac-GM of Canada Group (CPC), but it has yet to be approved by the corporation. No timetable is being given for corporate approval.

Despite rumors to the contrary, the program is not primarily related to the Saturn project.

City officials here have said that the building would be used for light industry and would involve plastic parts. GM would not comment on that subject.

January production highest since October

By Kathy Boyer
Detroit Reporter

U.S. auto production for January—758,107 units—was the highest monthly total since 763,740 last October.

January's build was 35.03 percent more than December's 561,439 but 0.84 percent below the 764,551 units turned out during the year-ago month.

Last week's estimated output of 176,400 cars was up 2.13 percent from the previous week's 172,719 and 0.06 percent below the year-ago week's 176,504.

Companies accounted for last week's scheduled production as follows: General Motors, 55.54 percent; Ford Motor Co., 22.07 percent; Chrysler Corp., 16.78 percent; Honda of America Mfg. Co., 2.13 percent; New United Motor Mfg. Co., 1.68 percent; Nissan Motor Mfg. Co., U.S.A., 1.01 percent, and Volkswagen of America, 0.79 percent.

As reported earlier, American Motors' Kenosha plant was down last week for inventory adjustment. It is scheduled to resume production today (Feb. 10).

GM's Pontiac G assembly plant was closed last week. It produces the Buick Regal and Oldsmobile Cutlass Supreme and is scheduled to resume production today.

GM scheduled overtime Saturday (Feb. 8) at its Oklahoma City and Tarrytown, N.Y., plants.

Ford slated overtime Saturday (Feb. 8) at Wixom, Mich.; Wayne, Mich.; Kansas City, and Atlanta.

Chrysler has slated daily overtime this week (Feb. 10) at its plants in Belvidere, Ill.; St. Louis (No. 2), and Newark, Del.

Truck production best since 1979

U.S. truck makers produced 312,358 trucks in January, the highest for that month since January, 1979, when 336,734 were assembled.

Last month's output, which was 29.44 percent more than December's 241,322, was the best since October, 1985, when 341,249 trucks were built.

January's production was 7.53 percent more than the year-ago month's 290,492.

Last week's scheduled production of 72,413 trucks was slightly (0.42 percent) above the previous week's 72,113.

GM scheduled overtime Saturday (Feb. 8) at its plants in Janesville, Wis., and Moraine, Ohio.

Ford slated Saturday overtime at its Twin Cities and St. Louis assembly plants.

January record for Canadian trucks

January's truck production in Canada was the best ever for that month.

The makers produced 80,269 units, the highest total for any month since the 80,594 assembled in May, 1985.

January's output was 43.88 percent more than the 55,789 assembled in December and 2.19 percent better than the year-ago month's 78,546.

Scheduled production of 19,167 trucks last week was the highest since the week ended Dec. 7, 1985, when 19,256 trucks were built.

Last week's scheduled production was 3.59 percent more than the previous week's 18,503 and 2.31 percent above the year-ago week's 18,735.

Both Canadian truck and car makers passed the 100,000 mark last Friday (Feb. 7).

Car makers built 87,204 units in January, 17.21 percent more than December's 74,402 and 2.75 percent more than the year-ago month's 84,871.

The estimated production of 21,460 cars last week was the best output of any week since the 21,808 assembled the week ended Dec. 21, 1985.

Last week's scheduled output was 4.08 percent more than the previous week's 20,619 and 9.69 percent more than the year-ago week's 19,564.

GM, Ford bet on 'human' machines

By Michelle Krebs
Financial Editor

General Motors and Ford Motor Co. are betting that machines capable of mimicking human beings will give them a competitive edge in automobile manufacturing of the future.

The auto makers are further betting that the way to move rapidly growing artificial intelligence technology onto factory floors quickly is by having small, entrepreneurial companies put it there.

This update on artificial intelligence begins a two-part prelude to the Society of Automotive Engineers' Detroit convention, which opens Feb. 24. Next week's focus is individual machine companies and their inventions—part of a broader SAE show preview.

In the past year and a half, GM has invested about $100 million in buying minority interests in small, relatively new companies with artificial intelligence technology—technology that emulates a human function.

Ford has invested $63 million in companies specializing in artificial intelligence and computer integrated manufacturing.

Included in the artificial intelligence family are: Machine vision, technology which emulates human sight; robotics, technology that imitates human movement; and expert systems, also known as

Japan to extend restraints

But it hints this year will be last of quota

By Francis J. Gawronski
Tokyo Bureau Chief

TOKYO.—The Japanese Government announced last week that it will continue voluntary restraints on automobile exports to the U.S. at the current level for another year starting April 1, but it hinted strongly that this would be the last year for the quotas. The export limit will continue to be 2.3 million cars.

Michio Watanabe, Minister of International Trade and Industry, told a hastily called press meeting that the restraints were being extended for another year primarily in consideration of the Japan-U.S. trade deficit. Watanabe made the announcement here after the decision was leaked several hours earlier in Washington, following the Japanese Government's notification of its intention to the U.S. Government through diplomatic channels.

Watanabe said he will inform each of the of the Japanese auto makers of the decision in writing. The method of allocating export quotas to each manufacturer and their industrial volume will remain the same as in 1985, he said.

Meanwhile, Naoki Kuroda, director of the MITI Automobile Division's machinery and information industries bureau, strongly hinted that this may be the last year for the restraints. When asked during a briefing for the foreign press if the restraints would extend beyond the next fiscal year, Kuroda called attention to the published announcement and noted that it just referred to the 1986 fiscal year. He said Japan feels the ideal situation would be free automotive trade because it would be good for both the industry the consumer. He said quotas are not a right and "we hope the American people feel the same way."

Watanabe said Japan will hold auto shipments to 2.3 million units in the next fiscal year, the same as in the current year.

Before the decision was made, MITI officials sounded out the U.S. Government, Congress and U.S. auto makers as well as Japanese auto makers' export prospects. Indications were that if the

Omni-Horizon price cut may spread at Chrysler

By Mary Connelly
Detroit Reporter

Chrysler Corp.'s bold move last week to offer 1987 "America" versions of its Omni and Horizon subcompacts for $710 less than current prices is an experiment which could lead to applications in additional lines.

On May 15, Chrysler will introduce the $5,499 America model which will be available with only two equipment packages and only three free-standing options.

Automotive News reported Chrysler's new program in its Feb. 10 issue.

Chrysler Chairman Lee Iacocca called the introduction of the America models "an experiment" and "the first step on the road to Liberty," a reference to Chrysler's effort to cut $2,000 out of the cost of a car to better compete with imports.

"It's a test of our ability to profitably produce a subcompact in

Dealer total down 229 for year

By John K. Teahen Jr.
Senior Editor

After two years of gains, the domestic dealer total nosedived in 1985.

The annual Automotive News census found 20,673 dealerships handling domestic makes of passenger cars on Jan. 1, a decline of 229 from the 20,902 in operation a year earlier.

In 1984, the total rose by 61 outlets, and in 1983 there was an increase of 42. But those two years were exceptions to a long-term trend. After a rise in 1955, the domestic dealer total dropped for 27 consecutive years before the 1983 upturn.

Four of the five manufacturers in the domestic category saw their dealer totals decline in 1985. Chrysler Corp., with a gain of 15, was the sole exception.

There were dips of 135 outlets for General Motors, 47 for Ford Motor Co., 44 for American Motors-Renault and 22 for Volkswagen. The combined loss of 233 was reduced to 229 by a change in the number of intercorporate duals.

All figures in this article and in the accompanying tables refer to the net change in the dealer population, both for the individual manufacturers and car lines and

Bandit gang raids Chrysler

MEXICO CITY.—The wave of armed assaults sweeping Mexico has finally reached the automotive sector.

A band of 15 robbers, armed with machine guns and heavy automatics, attacked the Chrysler de Mexico Lago Alberto plant and made off with a $253,000 payroll for plant workers.

Five armed bandits kidnapped a cashier, Fernando Maldonado Gonzales, on his way to an evening of work. They took their hostage to the Chrysler plant, where 10 other armed men joined them.

Maldonado Gonzalez was forced to approach gate guards and request entry. This was not unusual since a skeleton night staff frequently was on duty.

Once inside, the bandits disarmed a half-dozen guards and forced Maldonado Gonzalez to open the safe. The assailants then locked the cashier and the guards in the payroll office and made off with the money in three cars.

How GM fares in ad-rate blitz

By Edward Lapham
and Jesse Snyder

General Motors' Media Council is wringing bigger ad discounts from many magazines while locking itself into multi-year contracts and promising more pages over the long haul.

But the GM media juggernaut, designed to pare costs for the auto maker, is meeting resistance from some quarters—most notably The Wall Street Journal.

In no case has GM achieved all, or even most, of the highly publicized "14 points," although it has gained some ground, particularly in the area of long-term contracts and discounts based on dollar volume instead of page count.

In addition, Ford, Chrysler and Toyota already have signaled publishers that they expect the same breaks GM wrangles.

Despite contentions from most publications that they did not knuckle under, there is evidence that many did just that, sacrificing pontifications about the sanctity of the rate card in exchange for assurances of continued business.

GM's list of 14 negotiating points is an expansion of an earlier Ford Motor Co. effort.

Two senior Ford advertising agency executives said GM is still playing catch-up. "They're running about six years behind us on this one," said one. "Ford already has multi-year deals with some magazines where it makes sense to do so." He characterized the GM effort as abrasive and a bit clumsy, without the informal give-and-take that comes with experience.

One top GM agency executive also believes Ford and Chrysler Corp. have a head start on innovative media bargaining. "It wasn't on GM's list of priorities before," he said.

GM is still negotiating with several consumer book publishers and won't begin talks with trade publications for up to six months because GM's 30-person Strategic Business Unit overseeing bargain-

80,000 seek 3,500 jobs at Mazda U.S.

By Francis J. Gawronski
Tokyo Bureau Chief

An estimated 80,000 persons sought applications for 3,500 jobs at the new Mazda Motor Mfg. U.S.A. plant under construction in Flat Rock, Mich.

All the requests poured in during the 12-day period beginning Feb. 4, when the company initiated hiring procedures.

Hiring preference is expected to be given to about 14,000 laid-off Ford Motor Co. employes who meet Mazda's qualifications. Ford owns 25 percent of the Japanese automaker. Mazda and the UAW signed a letter of agreement in 1984 to give the laid-off workers preference in hiring.

The provisional agreement also states that starting pay will be 85 percent of Ford's hourly rates.

Mazda set a Feb. 15 deadline for requests for employment applications and stipulated the requests be in writing.

Mazda Motor Corp. said it plans to bring about 400 of the initial employes to Japan for training starting in June.

The initial staffing at Flat Rock will include production and maintenance team members and supervisors. Full-scale hiring will begin this summer and will continue through the plant's scheduled start of production in the fall of 1987.

Although Mazda plans to provide orientation and instructions to its newly hired team members in Flat Rock, small groups of 30 to 50 supervisors, including team and unit leaders, will be selected to "train in Mazda production techniques and also to learn about Japanese culture."

Mazda said team members chosen for training will first visit the company's headquarters and plants in Hiroshima.

They then will visit Mazda's modern plant in Hofu, Japan, which served as the model for the Flat Rock facility, to learn about Mazda's production and management systems, the firm said.

"The primary purpose of this visit is to instill in the new employes Mazda's dedication to high quality products," Osamu Nobuto, Mazda Manufacturing president, said.

"The trip also is meant to provide the American employes with an understanding of Mazda's corporate commitments and management philosophy, thereby strengthening the bond of confidence and cooperation between team members and the company," Nobuto said.

Learning about Japanese culture is a significant aspect of the program, Nobuto said.

The $450-million plant will produce 240,000 vehicles annually at full capacity.

Coin Financial Systems in the NADA computer wave

It was a computer show for dealers

By Jake Kelderman
Washington Reporter

NEW ORLEANS.—"Is this a computer show or is this an auto show?" some dealers were heard to ask at this year's NADA convention. And well they might ask, for computers and computer companies were by far the dominant exhibitors this year.

There were major displays by industry leaders ADP, Reynolds & Reynolds, Oakleaf and Applied Data Systems, Inc., as well as the first showing of the General Motors/EDS alliance's Dealer Information Systems Division (DISD), GM's highly touted effort to link its entire operation through the wonders of computer technology.

Systems simple ehough for the smallest dealer and those sophisticated enough for the largest were on display as well as software ranging in function from one to "relax" a potential buyer who is in the showroom to one to track down any that might have left without a purchase.

ADP showed off a new "super computer" dubbed MAX 25000 for large dealerships, high-volume dealerships and multiple-location dealerships with eight megabytes of main memory, one gigabyte of disk storage and the ability to handle data from 205 terminals at one time. Reynolds & Reynolds

Saab follows Volvo on plant site

NYKOPING, Sweden.—Saab-Scania has confirmed that—like Volvo—it will set up a new passenger-car assembly plant in a large shipyard that is being closed down by the government. Saab also said it has entered into a deal with the government similar to Volvo's.

Saab will move a local assembly operation into the Kochum shipyard in Malmo when production is halted there in 1988. The car maker will expand its existing operation, and new jobs will be offered to the former shipyard workers.

Saab's compensation from the government will be exactly the same as for Volvo's Uddevalla facility—12.5 billion Swedish kronor (about $1.7 million) released from otherwise frozen investment funds. The government will also give Saab a fixed training cost contribution of 200,000 kronor (about $26,800) for each new employe taken on.

The agreement is part of a government package designed to provide new jobs for 2,300 of 2,700 shipyard workers in the Malmo area.

By deciding to expand in Malmo, Saab has moved beyond its recently set goal of producing 150,000 cars a year in 1988. The company may reach 200,000 cars a year by 1994.

The Saab-Scania group of companies' investments for the Malmo plant and other projects in Sweden from 1986-92 will amount to 31 billion Swedish kronor or some $4.2 billion.

The company plans to begin production at its new Malmo plant at the end of 1989. The facility will assemble cars from painted bodies produced in the Trollhattan plant. Initial production capacity will be 60,000 cars a year.

That total would be a substantial increase over production at the existing local facility, even if capacity there is boosted as planned from the current 23,000 cars a year to 35,000 in 1988.

By that time, Saab will begin transferring operations to the new premises in Malmo, four miles to the south. The work force will subsequently grow from 1,200 people (versus 630 currently) to 1,600 in 1989.

In a second stage of expansion, projected capacity after 1992 could increase from 60,000 a year to 90,000—with only one-third of that production based on painted bodies supplied by the Trollhattan plant.

"This wil help reduce the shortage of cars," said Bengt Odmann, Saab Car Division vice president of sales and marketing. "We will be in a better position to respond to market fluctuations."

According to plans, a new body shop and paint shop will be constructed in Malmo, increasing the work force from 1,600 to 2,700 people.

Since it is not actually buying the shipbuilding company, Saab cannot duplicate Volvo's coup of using a shipbuilder's losses to reduce taxes on its auto-making profits.

One plant may replace AMC Toledo, Kenosha

By Richard Johnson
Detroit Reporter

CHICAGO.—American Motors is considering replacing both its Kenosha and Toledo assembly plants with a single facility that would turn out both Jeeps and passenger cars, according to Joseph Cappy, AMC executive vice president and chief operating officer.

Cappy's comments at the Chicago Auto Show were the first indication AMC was considering replacing the Toledo Jeep plant, where AMC assembles all Jeep models except the new Wrangler. The Wrangler is built in Brampton, Ont.

He said AMC could consolidate Jeep and car operations in a new plant that is expected to house a 1989 replacement for Alliance/Encore. The company is currently negotiating with five Midwest states, although Cappy said the Alliance/Encore replacement could also be sourced in a foreign country.

AMC is expected to set its plans this spring after receiving responses to detailed questionnaires submitted to the competing states.

"The important thing is that the two facilities we have today, Kenosha and Toledo, are not cost-efficient," Cappy said, noting that both operations are more than 70 years old, with numerous buildings and antiquated layouts.

Several states approached AMC last year after company officials let it be known they would not build the 1989 Alliance/Encore replacement in the aging, multi-story Kenosha facility.

AMC has acknowledged discussions with Wisconsin officials on ways to improve its competitiveness in the state, but has declined to identify other finalists competing for the industrial prize. However, company spokesman have said the contending states are "generally in the Midwest."

In response to a question about the possible closure of Toledo, UAW President Owen Beiber last week said Cappy may be opening a can of worms.

"I would certainly hope that doesn't become the final word there," said Beiber. "I'm sure more will be said about that subject before that comes to pass, and I certainly hope it doesn't."

The Jeep plant has been a source of labor headaches for AMC.

Construction of a new assembly plant will cost $300 million to $400 million, according to Cappy, who said the additional cost of developing new product for the plant would depend on the number of vehicles manufactured there.

During a meeting with reporters at the show, Cappy also said AMC is continuing its pursuit of Asian sources for products and components. It has been widely speculated that AMC will import a low-cost entry-level car from Asia or perhaps a small van from a Far Eastern producer.

Valentines for AMC from Kenosha hopefuls

KENOSHA.—Employes and townspeople hoping to keep the American Motors plant here sent the auto maker about 9,000 valentines last Friday (Feb. 14) along with a red satin heart-shaped pillow embroidered with the words "AMC, don't break our hearts."

The cards, provided by the Kenosha News, were flown to AMC's Southfield (Mich.) headquarters.

AMC cuts back Cherokee output at China plant

CHICAGO.—Citing a shortage of foreign exchange currency in China, American Motors has cut in half its 1986 production plans for the Beijing-built Cherokee launched last fall.

Beijing Jeep Corp., AMC's joint venture with the Chinese, originally set a 1986 production goal of at least 6,000 units for the Cherokee. But at the Chicago Auto Show last week, Joseph Cappy, AMC executive vice president and chief operating officer, said lack of hard currency in the country has forced the company to scale down the original target to 3,000-4,000 units.

"Our venture is extremely good, but there is a currency problem in China," said Cappy. "Our company has shared that problem, but it's a Chinese problem."

However, he saw no threat to the history-making, three-year-old venture, which he said Chinese officials are anxious to see succeed because of its high visibility.

Chinese content on the Cherokee has been put at about 12 percent, although Beijing Jeep has approved an aggressive investment program aimed at quickly increasing that percentage.

Besides the Cherokee, Beijing Jeep assembles 18,000-20,000 BJ212 models annually, although the old, Russian-designed vehicle is expected to eventually give way to the Cherokee.

Later this year, AMC will begin assembling the Jeep Comanche pickup truck in Beijing, with annual volume pegged at 7,000-8,000.

Stock soars to 6½-year high

By Kathy Boyer
Detroit Reporter

Sales incentives in January did not reduce the domestic-car inventory.

The stockpile of unsold new cars rose inexorably during the deep-winter month.

As of Feb. 1, the number of unsold new domestic cars was a 6½-year high and the days' supply was a 3½-year high.

Total domestic-car inventory of 1,767,086 for Feb. 1 was the largest tallied since Aug. 1, 1979, when 2,026,294 were counted. The unit count had been 1,629,649 a month earlier and 1,565,456 a year earlier.

Days' supply on Feb. 1 also jumped, reaching 82, the highest recorded since Sept. 1, 1982, when an 88-day supply was reported.

Days' supply had been 73 a month earlier and 65 a year ago.

Feb. 1 inventories were shared as follows: General Motors, 61.56 percent; Ford Motor Co., 19.00 percent; Chrysler Corp., 15.50 percent; American Motors, 2.17 percent; Volkswagen, 1.07 percent; Honda, 0.37 percent, and Nissan, 0.33 percent.

A month ago the standings were: General Motors, 63.22 percent; Ford Motor Co., 18.46 percent; Chrysler Corp., 14.16 percent; American Motors, 2.55 percent; Volkswagen, 1.18 percent; Nissan, 0.28 percent, and Honda, 0.15 percent. (All figures for VW, Nissan and Honda in this story are based on U.S. production only.)

By size class, the Feb. 1 inventory was divided this way: Subcompact, 16.61 percent; compact, 22.21 percent; intermediate, 37.99 percent; standard, 12.83 percent, and luxury, 10.36 percent.

A month earlier shares were: Subcompact, 16.50 percent; compact, 21.95 percent; intermediate, 39.78 percent; standard, 11.52 percent, and luxury, 10.25 percent.

Domestic models by size class and days' supply on Feb. 1:

Subcompact—Encore, 166; Fiero, 157; Laser, 138; Alliance, 121; Pontiac 1000, 113; Turismo, 110; Charger, 104; Nova, 99; Horizon, 93; Daytona, 91; Omni, 87; Volkswagen, 85; Chevette, 79; Lynx, 50; Escort, 34; Nissan, 27, and Honda, 19.

Compact—Capri, 168; Camaro, 135; LeBaron, 125; Eagle 111, Firebird, 109; Firenza, 102; Skyhawk, 98; Mustang, 94; Aries, 68; Topaz, 64; Reliant, 62; Tempo, 60; Cimarron, 59; Sunbird, 58, and Cavalier, 51.

Intermediate—Lancer, 163; Calais, 161; Regal, 161; Monte Carlo, 130; Dodge 600, 127; Somerset, 126; Grand Prix, 125; Caravelle, 118; LeBaron GTS, 117; Cutlass Supreme, 110; Century, 107; Bonneville, 90; New Yorker, 86; Cutlass Ciera, 84; Thunderbird, 84; Celebrity, 79; Cougar XR-7, 78; Taurus, 78; Pontiac 6000, 70; Marquis, 69; Citation, 66; LTD, 64; Sable, 61, and Grand Am, 43.

Standard—Parisienne, 158; Chevrolet, 130; Plymouth, 112; LeSabre, 96; Oldsmobile 88, 92; Crown Victoria, 83; Diplomat, 82, and Grand Marquis, 72.

Luxury—Electra, 124; Corvette, 93; Fifth Avenue, 85; Toronado, 83; Riviera, 71; Oldsmobile Ninety-Eight, 69; Seville, 63; Eldorado, 60; Cadillac, 58; Continental, 56; Mark VII, 55, and Lincoln, 41.

Import inventory dips

By Kathy Boyer
Detroit Reporter

Imported-car inventories on Feb. 1 showed a modest decline from the month-earlier total, but the days' supply was the highest in almost three years.

The Feb. 1 inventory count was 329,798 cars, according to Automotive News estimates. That total compares with 338,315 a month earlier and 262,990 a year earlier.

The days' supply—represented by unsold cars at dealerships, at dockside and in transit—on Feb. 1 was the highest for any month-opener since the 40-day stock recorded for May 1, 1983. Days' supply had been 28 a month earlier and 33 a year earlier.

Import trucks also carried a higher days' supply, reaching 48 on Feb. 1, the highest since Dec. 1, 1983.

A month earlier, the days' supply of trucks was 38, and a year earlier it was 36.

Unsold trucks numbered 124,781, compared with 102,664 on Jan. 1 and 101,619 on Feb. 1 a year ago.

The Feb. 1 combined imported car and truck inventory rose to 454,579—the highest since Jan. 1, 1983, when 487,851 units were in stock. This marks the fourth time in 36 months that the combined inventories have topped 400,000.

The car and truck inventory total represented a 39-day supply, the highest since May 1, 1983, when a 45½-day supply was reported.

On Feb. 1, import-car inventories were divided this way: Japan, 65.07 percent; Germany, 22.95 percent, and other countries, 11.98 percent.

A month earlier, the shares were: Japan, 62.79 percent; Germany, 25.18 percent, and other countries, 12.03 percent.

Cars by country of origin and their Feb. 1 days' supply were as follows:

Car sales decline, trucks gain in Canada

By Jenny L. King
Detroit Reporter

After five consecutive months of increases at the end of 1985, sales of new North American-built passenger cars in Canada were down 2.59 percent in January. But truck sales by the four major makers pushed 15.72 percent ahead of their year-ago total.

January car sales, with Ford showing the only increase, numbered 47,628, off some 1,200 units from 48,896 in 1985. The 2.59-percent decline followed a steady stream of improved sales beginning in August, 1985.

Ford reported sales of 11,227 domestic cars, up 8.34 percent from 10,363. General Motors was off 2.09 percent, to 25,673 from 26,221. Chrysler slipped 8.61 percent, to 9,206 from 10,073.

American Motors finished the month with sales of 940 units, down 40.54 percent from 1,581. The figures included 224 imported Renaults this year versus 442 in 1985. Volvo was down 11.55 percent, to 582 from 658.

GM's share of the new-car market in January was 53.87 percent, up from 53.63 percent. Ford earned 23.63 percent compared with 21.19 percent a year earlier. Chrysler slipped to 19.31 percent from 20.60 percent. AMC plunged to 1.97 percent from 3.23 percent, and Volvo had 1.22 percent, down from 1.35 percent.

In contrast, all four major North American truck makers posted sales gains in January. Total sales increased 15.72 percent, climbing to 23,727 from 20,503 last year. It was the 31st consecutive month of truck sales gains in Canada.

GM was up 16.51 percent, to 10,082. Ford climbed 17.11 percent, to 8,454. Chrysler reported a record January, with sales of 3,966 up 2.61 percent from 3,865. Jeep was up 59.92 percent, to 1,225 from 766.

The market shares shifted in favor of AMC and away from Chrysler. Ford and GM gained slightly.

AMC was up to 5.16 percent from 3.74 percent. Chrysler slipped to 16.72 percent from 18.85 percent. Ford had 35.63 percent, up from 35.21 percent and GM moved to 42.49 percent from 42.20 percent. Truck sales include captive imports.

†—Estimate

Car sales up 4 percent in Feb. period

By Jenny L. King
Detroit Reporter

Early February new-car sales rose 7,000 units, or 4.33 percent, from the equivalent 1985 period.

Low-interest-rate incentives were most probably the reason for the increase during a traditionally slow time of year.

Feb. 1-10, 1986, domestic sales of 172,373 included year-to-year increases for three of the six makers reporting a year ago.

With eight selling days in the period both years, the recent daily average of 21,547 was up 4.33 percent from 20,653 in 1985, when the total was 165,221. Two years ago, sales for the period reached 181,694. The record is 235,527 and dates back to 1965.

General Motors reported period sales of 99,621, up 7.03 percent from 93,077. Ford Motor Co. was up 6.08 percent, to 42,870 from 40,413. Chrysler Motors dropped 7.79 percent, to 22,113 from 23,980.

Volkswagen, on a roll with increased sales every period since Aug. 11-20, 1985, was up 27.56 percent to 1,148 from 900. Honda sales were off 20.27 percent, to 3,453 from 4,331. American Motors' sales estimate of 1,800 was down 28.57 percent from 2,520, and Nissan dealers delivered 1,368 U.S. Sentras in the period.

All figures in this story refer only to domestically produced autos.

GM's share of the market improved to 57.79 percent from 56.34 percent. Ford was up to 24.87 percent from 24.46 percent. Chrysler slipped to 12.83 percent from 14.51 percent. Honda's 2.00 percent was down from 2.62 percent a year earlier. AMC had 1.04 percent compared with 1.53 percent. VW edged up to 0.67 percent from 0.54 percent. Nissan earned 0.80 percent of the Feb. 1-10 domestic market.

Domestic makes reporting sales increases were Chrysler, up 16.95 percent; Ford, up 11.84 percent; Mercury, up 4.33 percent; Cadillac, up 8.16 percent; Chevrolet, up 22.05 percent; Oldsmobile, up 4.08 percent; Pontiac, up 5.49 percent, and VW, up 27.56 percent.

Minus signs stood before sales numbers from Plymouth, down 10.24 percent; Dodge, down 20.38 percent; Lincoln, down 23.37 percent; Buick, down 12.32 percent; AMC, down 21.88 percent; Renault, down 29.55 percent, and Honda, down 20.27 percent.

Year-to-date sales reached 808,277, up 1.89 percent from 793,258.

Kelley, commander, U.S. Army Training Center and Fort Dix.

LaFata steps down at Aptco

TAYLOR, Mich.—Sam LaFata, president of Aptco Auto Auction here, is leaving to make way for the Anglo American Auto Auctions, Inc., team.

When LaFata purchased Aptco 16 years ago, it was a two-lane, 140-car-per-week operation in nearby Melvindale. After a year, LaFata purchased 18 acres of land here and built a four-lane auction with automatic car wash, reconditioning center and quarter-mile test track. Today, Aptco stands on 50 acres of land and handles more than 100,000 cars a year, including executive fleets sold by the major manufacturers.

LaFata recalls his first Chrysler factory sale in 1979, when the auto maker had fallen on hard times.

"We sold over 986 cars and handed Chrysler a check for over $5 million—not bad for four hours' work," he said.

LaFata is a past president of the Michigan Independent Automobile Dealers Assn. and of the Midwest Auto Auction Assn. He also has served on the board of the National Auto Auction Assn.

Nissan in U.S. to get engines from Mexico

MEXICO CITY.—Nissan Mexicana has confirmed that starting in the second half of this year, it will export 1,600-cc engines to the Nissan plant in Smyrna, Tenn.

The engines will be used in a remodeled version of the Sentra.

Anglo offers fleet liquidation

NASHVILLE.—A new service to help control high corporate fleet overhead costs and ease the burden of fleet turnovers is offered by the second-largest auction operator in the U.S.

The Auction Managed Fleet Plan of Anglo American Auto Auctions, Inc., utilizes the company's 12 locations around the country to liquidate fleets of various sizes.

"It's really a customized operation," said Dennis Thee, Anglo's vice president for sales. "We design a fleet plan for each customer, depending upon their particular needs.

"By centralizing all accounting and reporting operations at our Nashville headquarters and then combining them with our auction network, we are able to streamline the disposal of a company's fleet, keeping its overhead low."

Based on fleet users' research, Anglo now provides several new fleet-management services through its auction network. For instance, Anglo will oversee the reconditioning of each unit before auction, will transport cars to auction, will provide weekly sales and will offer detailed documentation with full payment to fleet sellers.

Anglo also has joined its 12 auctions with a network of 20 independently owned auctions in the Allied Auctions Group to further extend services to customers nationwide, according to Anglo.

The company attempts to coordinate the turning of the old fleet with delivery of new vehicles so transportation is uninterrupted.

A potential customer of the fleet plan is a company with an inconsistent procedure for disposing of its used fleet, said Anglo. Those companies often find themselves losing money by not obtaining the best price available and by spending inordinate amounts of time on fleet management.

According to Anglo, its fleet plan assimilates many of the necessary fleet department functions, thus turning the fixed overheads of fleet operation into variable overheads which are controllable and incurred only when needed.

The company offers an extensive advertising campaign for each client, outlining what's being sold, when and where. This is supplemented by Anglo's market reports to dealers in each auction area.

The Auction Managed Fleet Plan concept was developed by Anglo's parent company, British Car Auction Group, Ltd., in England, where more than 70 percent of the automobiles purchased are corporate-owned.

Anglo American is a wholly owned subsidiary of Sandgate Corp., a part of British Car Auction Group plc.

Carter heads Canadian dealers

TORONTO.—Howard G. Carter, Vancouver, B.C., has been named president of the Federation of Automobile Dealer Assns. of Canada.

Howard G. Carter

Carter replaces Brent Logan, a General Motors dealer in Yorkton, Sask., as head of the association, which represents all franchised new-car and truck dealers, both domestic and import, in the country.

Carter heads Carter Pontiac-Buick, Ltd., Vancouver, the largest Pontiac-Buick dealership in Western Canada. He also is president of Carter Honda and Carter Motor Cars, (Rolls-Royce, Bitter, Ferrari, Alfa Romeo, Nissan).

Burger explains lure of mall dealerships

By Richard Johnson
Detroit Reporter

CHICAGO.—The dealer franchise system is not going away, but it will undergo changes in the coming years, according to Robert Burger, Chevrolet general manager.

Chevrolet has been studying alternatives to the traditional one-dealer/one-showroom means of selling and servicing cars and trucks.

Burger told reporters at the Chicago Auto Show that new marketing techniques, such as a pilot program for mall dealerships, do not portend a restructuring of the basic auto retailing system in the U.S.

"I see nothing that says the franchise system is going to change, but there will be innovations," Burger said.

He said innovation is needed because state franchising laws have frequently prohibited manufacturers from establishing dealer points in growth areas.

"In many cases, we have been denied access to a market because of the franchise laws," he said. "That's why you are going to see innovation in the distribution systems. But the same dealers who are there today will be there 25 years from now."

Chevrolet has been reviewing retailing alternatives, including mall satellites and upgraded electronic videotext centers. But Burger said that even if most major purchases are handled by a home computer in the future, as is widely predicted, heavily capitalized dealer sites will remain central to the auto business.

"You've got to remember that nobody ever offered you anything for that TV set that wore out," he said.

"The one thing about the system that holds it in place is that used vehicle. Because of its original cost, it retains a pretty high marketable value and, somehow, you've got to be able to market that vehicle. I say the franchise system will stay in place primarily because of that," Burger said.

Chevrolet mall satellite stores, the first for General Motors, have been opened in Moline, Ill., and Appleton, Wis. The outlets are basically scaled-down sales offices owned and operated by a nearby dealer designed to glean prospects from heavy shopping-mall traffic.

Burger said the two dealer-owned Chevy stores were developed in response to requests from the individual dealers.

"Both of the dealers are younger guys—very innovative, very aggressive—and both saw an opportunity in their marketplace," he said. "We said, 'OK, we'll modify the sales agreement to allow you to do it.'"

But Burger said the satellite stores, while part of the future, are not necessarily the "wave" of the future.

"If you look at the example of Appleton, Wis., John Bergstrom, the dealer, is a very aggressive guy," said Burger. "A mall goes up several miles from his dealership, he's the only dealer in town and the traffic flow through that mall is fantastic.

"He had an opportunity to rent a pretty sizeable space to display vehicles," Burger added. "But it isn't how many vehicles he is selling. What he is finding is that people, given the opportunity to really shop, become much more deeply engrossed in the purchasing process. They're a lot less uncomfortable dealing with people who are experts in the products, but perhaps less expert in closing the deal."

The need for satellite units may also arise from new community growth patterns, he said. A 10-year-old store may see rampant development several miles away, leaving the dealer no alternative to setting up a mall outlet.

"Say the growth goes the other way on me," Burger said. "Someone puts up a mall. Why not go there and display six or eight cars, put three or four people out there and let them talk about why it's worth their time to come across town?"

Robert Starr, Chevrolet general sales and service manager, said the division is studying its existing satellite stores "to see what it brings to us."

While other GM divisions have established mall stores, Starr said Chevrolet has no current plans to add more secondary outlets.

"Every division in GM has two," said Starr. "We may put a third one in. We're trying to do it in certain parts of the country. So we would not put one in, for instance, 100 miles from where we have one. We're really trying to see what the market is going to do with these kinds of mall stores. If the experience is good, we'll see what we can do."

"Basically what we're getting is the traffic," he said. "We're trying to get the female buyer and the under-35 buyer, and if you think about where those people go to shop, it's in the malls."

Ford Division has situated a good many satellite stores in geographic areas without sufficient population density to support full-line dealerships. Ford has also developed several secondary units in large shopping malls.

Dealer tally declines to 20,673

Continued from Page 1

for the domestic industry as a whole.

The increases of 1983 and 1984 followed severe declines during the recession—drops that peaked at a staggering 1,607 outlets in 1980.

There was no compelling reason for last year's dip. Domestic new-car sales rose in 1985, topping 8 million for the first time since 1979. The 1985 slip seems to be simply a continuation of the move toward fewer but larger dealerships that has been in evidence ever since the end of the rebuilding of dealer organizations that followed World War II.

In 1985, there was a drop of 38 domestic-car outlets in the first quarter. The loss climbed to 77 in the second quarter and totaled 73 for the third. The fourth quarter brought a lighter falloff of 41 establishments.

Here are the domestic dealer figures by quarter during the year:

Jan. 1, 1985	20,902
April 1, 1985	20,864
July 1, 1985	20,787
Oct. 1, 1985	20,714
Jan. 1, 1986	20,673

Despite the decline in dealerships, franchise totals increased for six domestic makes. Eight were down.

All three Chrysler Corp. makes added franchises during 1985. Dodge was up 34, Plymouth was up 29 and Chrysler was up 26. At Ford Motor Co., there were gains of 20 for Lincoln and 9 for Mercury. Cadillac's total was up 5 for the year.

Chevrolet and Ford, the two largest dealer organizations, suffered the greatest losses in 1985. Chevrolet's franchise total was off 70 and Ford's was off 50.

Elsewhere, there were dips of 30 for Pontiac, 29 for AMC (Eagle), 23 for Renault (Alliance and Encore), 22 for Volkswagen, 15 for Buick and 10 for Oldsmobile.

As noted, Chrysler Corp. was the only domestic maker to increase its dealer total during 1985. It added 15 for a year-end count of 4,003, and its total climbed above 4,000 for the first time since mid-1980.

Chrysler's count advanced by one in the first quarter, 5 in the second and 9 in the fourth. The corporation has boosted its total in 12 of the last 13 quarters; the other—the third quarter of 1985—showed no change.

Franchise figures on Jan. 1 were Chrysler, 3,049; Plymouth, 3,009, and Dodge car, 2,927.

In addition to its 4,003 car outlets, Chrysler Corp. has 4 that handle only Dodge trucks. They are not included in the corporate dealership total or the Dodge car-franchise total.

Ford Motor's dip of 47 establishments last year followed increases of 94 in 1983 and 56 in 1984. The current tally of 5,517 compares with 5,564 a year earlier. Quarterly dips last year were 11-9-13-14.

Franchise counts for its three makes on Jan. 1 were Ford car, 4,682; Mercury, 2,747, and Lincoln, 1,598.

There are 117 dealerships that handle only Ford heavy-duty trucks. They are not included in the corporate car-dealership total or in the Ford Division car-franchise total.

GM's count went down by 135 in 1985 for a year-end net of 9,830. The dip was steeper than 1984's 75 and was about the same as the decline of 120 in 1983. Quarterly slips last year 20-35-35-45.

Including GMC truck outlets, the General Motors dealership total was 10,400 as 1986 began.

Franchise totals on Jan. 1 were Chevrolet, 5,050; Oldsmobile, 3,190; Pontiac, 2,980; Buick, 2,960, and Cadillac, 1,615.

AMC-Renault had 1,421 car dealerships on Jan. 1, a dip of 44 from 1,465 at the beginning of 1985. The total receded by 3 in the first quarter, 23 in the second and 24 in the third. The fourth quarter brought an increase of six outlets.

The Jan. 1 franchise totals were 1,368 for AMC and 1,318 for Renault.

AMC has 738 duals with Big Three makes, and Renault is included in 90 percent of them. Half of AMC's 73 links with Volkswagen also handle Renault.

VW had 877 dealers on Jan. 1, down 22 from a year earlier. There were declines of 5, 10 and 7 outlets in the first three quarters and no change in the fourth.

VW has an estimated 150 duals with the Big Three and/or AMC.

Dealer total in Canada records a small increase

WILLOWDALE, Ont.—The number of new-car dealerships in Canada has increased slightly, according to the semi-annual survey conducted by the Federation of Automobile Dealer Assns. of Canada.

The count in the October survey was 3,597, compared with 3,488 a year earlier, FADA reported. The number of franchises also increased, to 4,064 from 3,955 the previous year. Some dealers hold more than one franchise.

Of the 19 makes monitored by FADA, eight showed an increase in dealer numbers, eight showed losses and three had no change.

Among domestics, Ford franchises rose 3.2 percent and Chrysler was up 2.8 percent. Smaller gains were reported for General Motors.

Among imports, the number of Hyundai franchises rose 69.6 percent. Skoda was up 4.2 percent and Suzuki 12.8 percent. Small gains also were notched by Jaguar and Saab.

Volvo franchises were down 1.1 percent and Volkswagen had 3.9 percent fewer franchises. Small setbacks were recorded for American Motors, BMW, Honda, Lada, Subaru and Nissan. No change was recorded for Mazda, Mercedes-Benz and Toyota.

Franchise counts by make (with year-earlier tallies in parentheses) were: General Motors, 962 (960); Ford, 667 (646); Chrysler, 548 (533); Toyota, 208 (208); AMC, 198 (204); Volkswagen, 195 (203); Nissan, 187 (192); Honda, 184 (186); Hyundai, 173 (102); Mazda, 133 (133); Suzuki, 88 (78); Subaru, 80 (82); Lada, 78 (80); Volvo, 72 (81); Skoda, 61 (42); Mercedes-Benz, 53 (53); BMW, 45 (46); Saab, 43 (41); Jaguar, 22 (20), and other, 67 (65).

Laws against chop shops requested in Pennsylvania

HARRISBURG, Pa.—State Atty. General LeRoy S. Zimmerman asked the Pennsylvania Legislature for tough laws to crack down on auto theft chop-shop businesses.

Zimmerman said car theft in the state in 1984 increased 7 percent over the previous year to about 40,000 vehicles valued at $160 million. Because professional operations disassembled them, only 12.9 percent of the cars were recovered, he said.

Chrysler V-6 for Trenton if union acts

By Mary Connelly
Detroit Reporter

Chrysler Corp. will build its new V-6 engine at its Trenton (Mich.) engine plant if it can reach a "progressive" labor agreement with the UAW local at the site.

On Feb. 9, members of UAW Local 372, which represents 2,200 workers at the plant, authorized the union to negotiate a streamlined labor pact that could result in changes in work rules and job classifications.

On Feb. 10, Chrysler said it would invest up to $280 million to produce the new engine if the new agreement is reached.

Talks are scheduled to begin immediately, Chrysler said.

"If the new labor agreement is reached, production of the new engine will provide 1,500 jobs that otherwise would have been lost," said Anthony P. St. John, Chrysler vice president—industrial relations. "In addition, more than 500 jobs will be created in other plants of the corporation that will produce parts and components for the V-6 engine."

Patricia Wolford, president of UAW Local 372, said that in a letter to the union, St. John warned that without a new "progressive" agreement, employment at the plant would drop to 700 by 1990 and that it was "doubtful the plant will remain viable." The plant currently produces 4-cylinder engines.

Wolford said 99 percent of the estimated 1,200 to 1,500 UAW members voting favored authorizing negotiation of a new-style agreement. A new local pact would also require ratification by the local membership.

Chrysler would begin producing the new 60-degree V-6 engine at the plant in the 1990s.

The V-6 will power a number of yet-to-be-introduced Chrysler products. No details have been released, but it is likely that the engine would replace Chrysler's 2.2-liter and 2.5-liter 4-cylinder engines in some upscale applications.

UAW President Owen Bieber said last week that the Trenton plant is one of five targeted for revitalization under a program outlined in the national UAW/Chrysler contract approved last fall.

The aim is to "ensure the long-time life of those plants," Bieber said.

Chrysler has maintained that so-called modern, progressive agreements will boost productivity and make its plants more competitive.

Wolford said Chrysler has not yet outlined its contract proposal but that the company has "alluded to classification changes and work rule changes." Wage and benefit rates established by national contract would not be affected, she said.

Chrysler Motors Chairman Gerald Greenwald said last week the national labor agreement negotiated in October "put in place a model plant arrangement."

"It was up to the international, each of the local unions and up to our management in each of our plants to decide which of our plants would be identified as model plants, which ones needed to consider more-modern agreements in order to preserve employment," Greenwald said. "Trenton is among them."

Year's millionth car arrives one day late

By Kathy Boyer
Detroit Reporter

U.S. auto makers assembled their millionth car Feb. 12, one day later than in 1985.

So far this year, 1,106,051 cars have been built, 4.16 percent behind the 1,154,111 completed last year at this point.

Last week's estimated output of 175,237 cars was 0.75 percent more than the previous week's 173,929 and 19.30 percent more than the year-ago week's 146,886, when bad weather slowed production at several plants.

Companies shared last week's estimated production as follows: General Motors, 55.51 percent; Ford Motor Co., 21.67 percent; Chrysler Corp., 17.09 percent; Honda of America Mfg. Co., 2.14 percent; Nissan Motor Mfg. Co., U.S.A., 1.02 percent; New United Motor Mfg., Inc., 1.69, and Volkswagen of America, 0.88 percent.

As reported earlier, AMC's Kenosha plant is closed for inventory adjustment. The plant is expected to resume production late this month.

GM reported no overtime last week.

Ford slated overtime Saturday (Feb. 15) at its Atlanta plant.

All Ford plants except Chicago are scheduled for daily overtime this week (Feb. 17).

Overtime is slated Saturday (Feb. 22) at Ford's Wixom (Mich.), Wayne (Mich.) and Kansas City plants.

Truck production rises to 72,493

Domestic truck makers' targeted output of 72,493 trucks last week was 0.71 percent more than the previous week's 71,983 and 9.55 percent more than the year-ago week's 66,172.

Year-to-date, 456,120 trucks have been assembled, 4.65 percent more than the 435,840 completed last year at this time.

General Motors scheduled Saturday (Feb. 15) overtime at its plants in St. Louis; Moraine, Ohio; Lordstown, Ohio, and Baltimore.

Saturday overtime was slated at Ford Motor Co.'s Norfolk plant.

Ford has scheduled daily overtime this week (Feb. 17) at all plants except Norfolk.

Saturday (Feb. 22) overtime is scheduled at Ford's Twin Cities and St. Louis plants.

Canadian car output highest of 1986

Canadian auto makers last week scheduled their highest production of the year: 21,481 cars—7.33 percent more than the previous week's 20,014 and 10.55 percent more than the year-ago week's 19,431.

So far this year, 128,699 cars have been assembled, 2.09 percent below the 131,446 completed last year at this point.

Canadian truck makers pegged production at 18,716 units last week, 1.04 percent below the previous week's 18,912.

Last week's output was 25.79 percent more than the year-ago week's 14,879, when Chrysler Corp.'s Windsor (Ont.) plant lost production because of bad weather.

Year-to-date, 119,447 trucks have been built, 1.46 percent below the 121,216 assembled last year at this time.

Makers say '85 output totaled 8,186,040 cars

DETROIT.—Revised calendar-year totals released by auto makers place 1985 U.S. auto output at 8,186,040 units, up 5.25 percent from 1984's 7,777,721.

General Motors reported 1985 production of 4,822,478 cars; Ford Motor Co., 1,636,150; Chrysler Corp., 1,266,068; Honda of America Mfg. Co., 145,337; American Motors, 111,138; Volkswagen of America, 96,458; New United Motor Mfg. Co., 64,601, and Nissan Motor Mfg. Co., U.S.A., 43,810.

60th year—$50.00 per year, $1.25 per copy

SAE turnout due to reach 32,000 peak

Keynoter heralds new supplier role

It's SAE Week in Detroit, and some 32,000 of the industry's unsung heroes have gathered for the organization's annual International Congress and Exposition. Attendance is expected to be the largest in the history of the event.

There's no shortage of industry leaders on hand, but this week is for the lesser-known automotive folks—the engineers, designers, researchers who play a vital but often unheralded role in the industry.

The theme of this week's gathering in Detroit's Cobo Hall is Excellence in Engineering, a topic that will pervade the technical sessions and special events.

As the proceedings opened, attendees were told that a new day is dawning for automotive original-equipment suppliers. The speaker was Martin D. (Skip) Walker, executive vice president, Rockwell International Corp.

In remarks prepared for his keynote address, Walker predicted that the auto manufacturers' practice of using suppliers as "an overflow valve," letting them make items the auto companies either can't or won't produce themselves, soon will become a thing of the past.

"The North American automotive industry can no longer afford it," he declared.

Walker advised the OEMs to "find a supplier who knows your business so well he can pull up a chair at your next long-range product planning session—a supplier who knows more about his specific piece of business than anyone else."

As for suppliers, Martin urged them to become "sharpshooters" and go "niche-picking."

He told them: "Find yourself a special niche in this business and concentrate your best engineering minds and efforts on developing those programs, products, components, subsystems or packaged assemblies where you have a technological edge."

Addressing the annual SAE banquet Thursday will be U.S. Transportation Secretary Elizabeth H. Dole. She is expected to touch on the Excellence in Engineering theme in her address.

"I think that by fully understanding what a customer needs, and by engineering a finished product that meets his need and both easy and cost-effective ... you to manufacture, you'll find ... the profitable future business you can handle."

More seek a piece of small-car pie

By Michelle Krebs
Financial Editor

The U.S. small-car market is heating up to a fever pitch that industry observers say will last through the decade.

The South Korean-built Hyundai Excel went on sale last week—the latest entry in the fiercely competitive small-car market.

Companies like Hyundai and others outside of the traditional auto-producing nations have added a new dimension to the U.S. auto industry.

More and more players, including those from South Korea, Taiwan and Yugoslavia, will be fighting—along with the U.S. and Japanese makers—for a piece of the small-car pie. And that pie is getting smaller.

At the same time, the Japanese Government has decided to extend quotas on car exports to the U.S. Observers view that decision as a signal to Japanese makers to produce more cars for the U.S. market right here in the U.S.

The universal sentiment is that there is no way for overall vehicle demand in the U.S. to absorb the supply of cars that will be coming from the traditional U.S. makers plus the new entries. The situation in the small-car segment is even more intense than in the general market.

A study by Data Resources, Inc. (DRI), shows that by 1988, retail car sales will be about 11.8 million units, while production capacity focused on the U.S. market will be 15.5 million units, an overcapacity of nearly 4 million units.

"Almost all of the 4 million is in small cars," said John Hammond, a DRI economist. "Small cars represent about half of the total market, or roughly 6 million units. There is 10 million units of small-car capacity. That means about 40 percent of the capacity will sit idle."

Like most analysts, William Pochiluk Jr., an auto analyst with Autofacts, Inc., sees the squeeze being put on the traditional U.S. producers. He predicts U.S. plant closings, with small-car plants being the most vulnerable.

In a recent report, he listed 10 vulnerable U.S. plants that may be closed (story on Page 30). The plants represent nearly 2 million units, or 18 percent of small-car capacity.

Industry observers envision intense price competition in all segments throughout the decade but even more in the subcompact and compact segments.

The first signs of price pressure came earlier this month when Chrysler Corp. announced that it was slashing the base price of its Omni/Horizon models by $710.

"That was the first crack in the wall," said Jean-Claude Gruet, auto analyst for Salomon Brothers, Inc. "The crack will become larger and the walls could come tumbling down."

Further complicating the issue now are financing incentives and lower gasoline prices.

While lower gas prices are good for the auto industry generally, they make the smaller, fuel-economical cars less desirable. Financ-

GM British bid runs into snag

By Richard Feast
European Editor

LONDON.—The sale of BL's Leyland Trucks and Land Rover Group (LRG) to General Motors is not the foregone conclusion it seemed to be only two weeks ago.

Several rival bids have been submitted, including one for an LRG management buyout led by David Andrews, BL's executive director in charge of the commercial vehicle division.

The numerous competing offers were announced against a growing chorus of anti-American sentiment, the like of which has already scuttled a proposed takeover by Ford of BL's Austin Rover Group.

Hill Samuel, the BL merchant bank, has set a March 4 closing date for all takeover proposals. Hill Samuel is the company that successfully floated Jaguar, a former BL company, on the London Stock Exchange in August, 1984.

The British Government, the only BL shareholder that matters, wants to make a decision by the end of March, though Prime Minister Margaret Thatcher has said she favors the GM-Leyland-Land Rover proposal.

The main interest seems to be in LRG. Other than GM and the group's own management, known bids are being submitted by Lonrhro, the U.K.-based trading concern with substantial vehicle distribution interests in the U.K. and Africa, and Aveling Barford, a manufacturer of heavy construction equipment which itself was once part of BL.

Leyland Bus has attracted the attention of Volvo—which has a truck and bus assembly plant in Scotland—and Aveling Barford in addition to the previously announced Laird Group.

Leyland Trucks is said to have been the subject of a proposal from another major truck maker whose identity has so far been kept secret. It was earlier thought that GM was the only likely purchaser.

The identities of those companies and other would-be purchasers have dribbled out during the past week. More are likely to

Renault tags new products for AMC

By Jean-Jacques Renaux
Staff Correspondent

NICE, France.—American Motors received two pieces of good news—a fresh endorsement from Renault Chairman Georges Besse and word that the long dryspell in bringing new products to the U.S. appears to be over.

Speaking to dealers here, Besse expressed continued support of Renault's partnership with AMC and the American auto maker's efforts to seal a deal with an Asian partner. Besse stressed that exports to the U.S. are crucial to adequate utilization of Renault manufacturing capacity in Europe.

"Our exports to AMC are very important," said Besse. "This year will again be difficult for AMC, but the increased success of our vehicles from the Jeep Division and the prospect of a new range of passenger cars which are better adapted to the U.S. market give us optimism."

Beginning next year, American Motors is counting on a substantial increase in Renault imports. AMC will begin bringing in R-21 compact models next spring and will follow a few months later

Edsel Ford gets a first-hand account

Black dealers recall barriers

By Matt DeLorenzo
and Jake Kelderman
Automotive News Staff

NEW ORLEANS.—Fred Rhoades started as a bird dog for a dealer in Alabama in the late 1940s. At about the same time, Todd Cochran, who couldn't join the car salesmen's union in San Francisco, became a top closer for one store.

In 1969, both men realized their shared dream of becoming dealers—in the kind of Horatio Alger story NADA boasts about. The story is even more impressive because Rhoades and Cochran are black.

The Big Three now have minority dealer programs of one sort or another, but when Rhoades and Cochran broke into the business, there was little—if any—concern for minorities obtaining dealerships. The only color the manufacturers were interested in was green. If you had the money, you were in.

Yet, there were roles for blacks in the auto busi-

Chrysler prepares product 'blizzard'

By Mary Connelly
Detroit Reporter

Chrysler Corp.'s upcoming preview of its Sundance and Shadow subcompacts will touch off a "blizzard" of product introductions planned in the next 15 months.

"Between March of this year and May of '87, Chrysler will have no less than nine new major product introductions," Chairman Lee A. Iacocca said recently. "We're going to put a lot of product out there."

Chrysler Motors President Harold K. Sperlich said the "blizzard of product" reflects Chrysler's competitive strategy.

"They're coming at us. We're going to be like the Chicago Bears and go straight at 'em with the blitz, and we're going to make them know we're around and the kind of fight they're in. We are not lying down," Sperlich told an Arizona audience recently.

Chrysler has not detailed all of the planned models.

The 1987 Plymouth Sundance and Dodge Shadow subcompacts will launch Chrysler's competitive assault, said Sperlich, who touted the cars' performance, economy and "pizzazz."

Chrysler will also begin building the Dakota truck, sized between its current full-sized pickup and imported Mitsubishi compact pickup, in April and will introduce it in midyear.

It will build about 100,000 of the medium-sized pickups.

The Dakota will be followed by the J-coupes, which Sperlich said will come out in late summer. He described the models as "intermediate, specialty, sexpot coupes."

"They're the kind of car we haven't really had," he said. "We're excited about that because it's going to open up new markets for us."

"And right behind that is our new Chrysler-Maserati which is the first child of a very proud marriage of the house of Maserati and the house of Chrysler," Sperich said.

The code-named Q-coupe will be Chrysler's first entry into the luxury coupe segment when it becomes available during the second quarter of 1987. The $25,000-$30,000 coupe is the first joint venture between Chrysler and the Italian manufacturer and an annual volume between 5,000 and 10,000 units is anticipated.

Sperlich said Chrysler's $12.5-billion five-year product and capital spending program will be used "to bring out a tremendous number of products to take on the competition." Chrysler in January increased that budget by $1 billion and said the record spending is "about double" what the corporation spent over the past five years.

New car eyed by Chrysler

By Mary Connelly
Detroit Reporter

Chrysler Corp. is negotiating to significantly increase its 3.5-percent equity stake in Maserati SpA and to develop a second car with the Italian manufacturer.

There are also plans to increase the production volume of the Chrysler-Maserati Q-coupe and for Maserati to develop additional, unspecified manufacturing programs for Chrysler.

Announcement of the plans could come within 30 to 60 days pending resolution of "a number of significant contract issues and other matters," said Howard E. Chase, secretary of De Tomaso Industries. Maserati is a 62.5-percent-owned subsidiary of De Tomaso Industries.

Initially, Chrysler had predicted annual sales of 5,000 for the luxury-sports coupe expected to be available during the second quarter of 1987. Recently, however, Chrysler officials have indicated that a production volume of up to 10,000 units was being contemplated.

Originally, De Tomaso anticipated about $500 million in revenues over a five-year period beginning in 1987 as a result of the Chrysler project.

De Tomaso Chairman in an interview with Automotive News said the production capacity exists to handle additional volume.

He said any subsequent model developed by Chrysler and Maserati would require design time and would follow the Q-coupe.

Chase declined to discuss what type of car may be under consideration for future development. The Maserati manufacturing programs for Chrysler being negotiated are in addition to Maserati's current plan to design and build a cylinder head for a Chrysler engine.

Chrysler Chairman Lee A. Iacocca and Maserati chief Alejandro De Tomaso at a January preview of the Q-coupe both indicated that additional cooperative ventures were likely.

Legend: New luxury touring sedan

Integra: The performance counterpart

Honda Legend enters high-dollar derby

By Matt DeLorenzo
Los Angeles Reporter

PALM SPRINGS.—The announcement that the Acura Legend will carry a base price just under $20,000 underscores American Honda's intention to go head-to-head with high-dollar European imports in the U.S. market.

The Legend four-door sedan is priced at $19,298 with manual transmission, $19,893 with automatic.

According to Tom Elliott, American Honda's senior vice president, two of the fastest growing segments in the market are luxury and sporty cars.Honda established its Acura Division to compete specifically in those two areas.

Initially, advertising will refer only obliquely to Honda.

The Integra, which is smaller than the Accord, represents the bottom of Acura's line. Elliott said new entries will be positioned above Integra and there may be entries above Legend in the line as well. Among projects reportedly under way are additional versions of the Legend, such as a two-door and a mid-engine two-seat sports car.

First-year sales projections put Legend and Integra at similar levels (28,000 and 30,000, respectively), but Elliott said, "The Integra will become our bread-and-butter car."

Integra prices start at $9,298.

The Japanese Government's recent extension of restraints on car exports to the U.S. for an additional year has not put a crimp in volume plans for either Honda or Acura, according to Cliff Schmillen, American Honda executive vice president.

He said output at the Marysville (Ohio) assembly plant will be increased by 70,000 units this year, from 150,00 to 220,000, with the expansion of three-door Accord production and the beginning of four-door Civic sedan output.

This will allow importation of 58,000 Japanese-produced Acuras, and also will enable the company to give several thousand more cars to Honda dealers. Schmillen said production in Ohio will exceed 350,000 units per year by 1988.

In entering the luxury-car battle, Elliott doesn't see Acura taking market share away from any particular make, but rather garnering sales from an expanding segment.

Operations are expected to begin March 27 through 60 dealers. That number will grow to 150 by the end of the year. Schmillen said the Acura dealer body will grow to 600 points by 1990 with an anticipated volume of 250,000 units per year.

In keeping with the separate identity of Acura, Honda dealers will not be allowed to dual with the new make. They will be allowed to have an Acura outlet about 10 miles from their Honda store. While the first Acura dealers hold Honda franchises, other dealers will be allowed to apply for the franchise in the future.

Honda's tag on Legend is $19,298

By Matt DeLorenzo
Los Angeles Reporter

PALM SPRINGS.—Acura's Legend, the premier car from American Honda's new division, will carry a base price of $19,298, company officials announced.

The price is $19,893 with automatic transmission. The four-door sedan is completely equipped and no options are offered.

Legend and Integra, which is Acura's second line, go on sale March 27.

Integra is offered in two body styles and trim levels—three-door and five-door hatchbacks and RS and LS trim.

Integra prices start at $9,298 for a RS three-door with manual transmission. The car is $9,788 with automatic. The RS five-door is $9,948 with manual and $10,438 with automatic.

In the LS trim level, the manual three-door is $10,593 and the automatic is $11,083. Five-door LS models are $11,343 with manual and $11,833 with automatic.

The two cars are intended to compete in the luxury and sporty-car segments of the U.S. market—two segments that Honda expects to see expand.

Legend is powered by a 151-HP, 24-valve, 90-degree V-6 engine. It rides on a 108.6-inch wheelbase and is 189.4 inches long 68.3 inches wide and 54.7 inches high. Curb weight is 3,077 pounds for the manual and 3,108 pounds for the automatic.

The Legend has an 18-gallon fuel tank.

Integra, which replaced the Quint in Honda's Japanese lineup, is between the Civic and Accord in size. The car is powered by a 1.6-liter, twin-cam, 16-valve 4-cylinder engine that produces 113 HP.

The three-door has a wheelbase of 96.5 inches. Overall length is 168.5 inches, width is 65.6 inches and height is 53 inches. Curb weight is 2,326 for manual-equipped models and 2,357 for the automatic.

The five-door is slightly bigger, with a wheelbase of 99.2 inches and an overall length of 171.3 inches. Height and width are the same as the three door. Curb weight is slightly higher at 2,390 pounds for the manual and 2,416 for automatic-equipped models.

EPA fuel economy ratings for Legend are 20 city/25 highway for the manual and 19 city/24 highway for the automatic. Integra manuals are rated at 26 city/30 highway and automatics are 25 city/31 highway.

DeLorean witnesses to be taped in Europe

By Michelle Krebs
Financial Editor

DETROIT.—John Z. DeLorean and an entourage of defense and government attorneys will travel to Europe to videotape testimony from witnesses who refuse to attend DeLorean's trial.

DeLorean was indicted by a federal grand jury here last fall on 15 counts, including various fraud charges. The indictment stems from financial transactions involving $17.65 million which disappeared from the defunct DeLorean Motor Co.

Federal Judge Julian Abele Cook Jr. last week granted the U.S. attorney's request to take depositions from witnesses in the U.K., the Netherlands and Switzerland.

Only one of the approximately 15 European witnesses agreed to testify at DeLorean's trial. Yet, the government attorneys argued, the case could not proceed without their testimony.

"If the government's position (as listed in the indictment) is correct," Cook ruled, "the inability of the government to take testimony of these witnesses who would tend to support the government's claims would result in a miscarriage of justice."

However, Cook ruled that the depositions must be videotaped.

DeLorean's attorney, Howard Weitzman, argued that the credibility of the witnesses is an issue and that jurors deserved to see the witnesses under fire.

"The jury has the right to watch the courtroom drama unfold," Weitzman said. "They deserve to see the witness break out into a cold sweat when I ask a few questions he wasn't expecting."

If DeLorean files a financial statement with the court showing he cannot afford the trip, the government will pay for transportation, food and lodging for DeLorean and his attorneys.

Weitzman said that DeLorean probably would file the necessary financial papers. Those papers will not be made public and will be placed under seal.

The judge will appoint a special master to travel with the group to settle legal disputes. The depositions, Cook ruled, must be taken at a U.S. embassy or consulate to guarantee DeLorean safe passage to those countries.

The trial is scheduled to begin April 7. However, it undoubtedly will be set back because of this latest development and subsequent problems that may arise.

GM critics praise air-bag decision

General Motors' harshest critics hailed the company's decision last week to offer air bags as a driver's-side option on some 1988 models.

GM did not disclose the price nor did it say on which models air bags would be available.

"It's about time," said Joan Claybrook, former head of NHTSA and now president of Ralph Nader's Public Citizen. "This is the breakthrough that we've been waiting for. GM was the biggest holdout."

Brien O'Neill, president of the Insurance Institute for Highway Safety, said, "When the world's largest auto maker makes this kind of commitment, it's obvious that air bag technology has arrived. This is very encouraging."

Clarence Ditlow, director of the Center for Auto Safety, had complained to NHTSA earlier this month that GM would use "cumbersome automatic belts with window shade retractors" as passive restraints.

Following GM's announcement, Ditlow said: "If GM genuinely gets into a competitive battle with the other manufacturers who are offering air bags, and if GM markets air bags the same way it markets air conditioning, stereos and automatic transmissions, the competitors had better watch out."

Federal law requires auto makers to have some form of passive restraint, either air bags, automatic belts or "friendly" interiors, in 10 percent of of their 1987 models. The percentage rises to 25 percent in 1988, 40 percent in 1989 and 100 percent in 1990.

That requirement can be rescinded if, by April 1, 1989, states accounting for two-thirds of the nation's population have enacted mandatory belt-use laws. The laws must be in effect by Sept. 1, 1989.

So far, Chrysler Corp. has not responded to GM's announcement. Chrysler has has indicated it may include driver-only air bags on some 1987 intermediate models.

Ford already offers air bags as an $815 option on its Tempo and Topaz models. Mercedes-Benz of North America has made them standard equipment on 1986 models.

GM Chairman Roger B. Smith made the announcement last week in a speech to the American Medical Assn.'s National Leadership Conference.

Smith said that GM was the first auto maker to design, build and sell an air-bag system. It offered the bags as an option on some full-sized and luxury cars in 1974-76.

GM had tooled to produce about 100,000 air-bag cars a year, but it sold only 10,000 in three years so it discontinued the option.

"We were the world leader in air-cushion technology," Smith said last week, "but we may have been ahead of our customers."

Smith said GM's new air-bag system "will be designed to work with—not in place of—the lap-shoulder belt, which will still be worn by the driver."

He urged the AMA to support passage of mandatory seat-belt-use laws, noting that even if new safety technologies eventually become standard equipment, it will take about 15 years for them to find their way into all cars on the road.

Smith told the doctors that GM "will continue to be in the forefront to improve and perfect" air-bag technology. He pledged that GM "will incorporate more built-in safety in each of our new automotive designs."

Correction

'85 GM fleet sales hit 1.1 million

By Jack Walsh
Staff Correspondent

BOCA RATON, Fla.—General Motors delivered a record 1.1 million cars and trucks to fleet customers in the 1985 model year, and auto-leasing firms were a major factor in the total, GM Chairman Roger B. Smith told the 31st annual convention of the American Automotive Leasing Assn. here.

The previous high for GM fleet sales was approximately 955,000 units in the 1979 model year, and Smith predicted that 1986 will be another good year "if the right things happen in Washington."

"We might be making all the right moves in our companies, but we can be stopped dead in our tracks if the wrong moves are made in Washington," Smith said.

"If our elected officials in the capital don't mount more serious efforts to address the budget and trade deficits, they can stifle economic growth and deal a serious setback to our industry," he added.

The GM chairman said he also is looking to Washington to enact an effective tax-reform bill.

"We think tax reform will improve the efficiency of our economic system and enhance the prospects of long-term growth," he added.

Auto-depreciation rules is one area that needs improvement, Smith told the convention.

"We understand the impact of this issue on automobile sales and leasing operations," he said. "We know your concerns about it, and we look forward to working closely with AALA and other groups to get this issue resolved satisfactorily."

Smith noted that GM is aware that "we complicate life for you with our new-car incentives. We know the effect of incentives on the used-car market, how they sometimes make late-model used cars seem less attractive."

"However," he explained, "sales incentives do help keep the economy rolling, and that's important to both of us. But we do hope to get away from them."

While the used-car market has been relatively strong, Smith noted at a press conference prior to his convention address that "we are watching it closely. Manufacturers may have to resort to incentives if sales weaken because of the new-car impact on the market."

He said Saturn, which he called GM's answer to foreign competition, "will be an ideal fleet car running through the year 2000."

Smith told the convention that the industry continues to produce more-fuel-efficient cars, and he defended GM's move to get the Federal Government to roll back fuel-economy requirements to 26 MPG for 1987 and beyond.

The standard is 26 MPG for 1986 models, but it will go back to 27.5 MPG for 1987 unless tha government changes the rule.

A 26-MPG standard, Smith said, "will not increase fuel consumption, but it will avoid plant disruption and job loss. And it will preserve not only consumer choice, but also your choice of available models for leasing."

The convention was the 31st for AALA, but it was the first for John H. Fitch Jr., who became executive director early last year when the association decided to switch its headquarters from Milwaukee to Washington.

Fitch, who has served with other trade groups in Washington and who is a former White House staffer, noted that AALA is the only organization providing full-time legislative representation to the leasing/rental business in the nation's capital.

"We're on a new path, taking new directions," he told the convention. "Some of our objectives are to improve communications with members, to express complex issues in laymen's terms and to seek greater participation by members in AALA activities."

The "new" AALA, Fitch said, is planning more and broader educational programs for members and will be holding seminars on industry issues periodically throughout the U.S.

At a board meeting during the convention, AALA President Arthur Wolpert said directors approved a one-time assessment of 75 percent of member dues.

"AALA is the most positive voice on leasing in Washington," he added, "and although it's a very expensive operation, the board has decided we must be represented" there full-time.

10 dealers win tuition for '86 World Congress

Ten auto dealers selected in a drawing at the NADA convention will receive free tuition and hotel accommodations at the Automotive News World Congress, which will be held July 27-30 at the Hyatt Regency Dearborn.

The winners are: Sherwood Smith, Sherwood Smith Motors (Chrysler-Plymouth), Johnstown, N.Y.; James A. Otwell III, Andean Motor Co. (Chevrolet), Cumming, Ga., and Ronnie Carter, Ronnie Carter Pontiac-Buick-GMC Truck, Rock Hill, S.C.

Also: Al Carney, Al Carney Chevrolet-Buick, Greencastle, Ind.; Val J. Feytek, Southland Motors (Mazda-Jaguar-Isuzu-Maserati) Covina, Calif.; Frank Mims, Century Lincoln-Mercury-Honda-Saab-BMW-Merkur, Greenville, S.C., and Bill Blesener, Blesener Olds-Datsun, Minot, N.D.

Also: J.P. Thibodeaux, J.P. Thibodeaux (Oldsmobile-Honda-Cadillac), New Iberia, La.; George Bumbu, Vermillion Ford Sales, Newton Falls, Ohio, and Bob LeMieux Jr., LeMieux & Sons (Toyota), Green Bay, Wis.

From Bhagwan to block

By Louise Kertesz
Detroit Reporter

Four Rolls-Royce automobiles formerly owned by Bhagwan Shree Rajneesh and subsequently purchased by European Auto Group, of Dallas, were sold at the ITT Kruse International Auction in Boca Raton, Fla., last week.

Bob Roethlisberger and Kenneth Wincorn, European Auto Group owners, had offered eight of the exotic Rolls-Royces at the auction, but four were not sold because the amounts bid for them "were not equitable," according to a spokesman for the firm.

The cars sold and their prices were: A 1981 Camargue, mid-$60,000s; a 1982 claret Silver Spur, mid-$70,000s; a 1984 two-tone blue metal flake Silver Spur, mid-$80,000s, and a 1984 Silver Spur painted with a silver peacock-patterned lace motif on a red base, high-$80,000s.

The cars sold from the Bhagwan's former collection were all specially painted by a former commune member, Deva Peter, who now works in Dallas for Precision Automotive—a firm that does restoration work and paint jobs for the local Rolls-Royce dealership.

European Auto Group has sold 24 of the 85 Rolls-Royces that disciples originally donated to the Rajneesh Modern Car Collection Trust for the Bhagwan's personal use.

Following the Bhagwan's departure from the U.S., the Dallas firm bought the cars in the single largest Rolls-Royce deal ever. Estimates have placed the purchase price as high as $8 million.

A spokesman for the Dallas group said that ITT Kruse wanted to auction the vehicles some time ago. Roethlisberger thought "it would be a fun thing to do and he decided to go for it. He was getting a lot of calls from Florida anyway."

Roethlisberger figured that the auction would be good publicity for the collection. The event had, in fact, an "extraordinary" turnout and media coverage, the spokesman said.

The unsold Rolls-Royces will be returned to the Dallas showroom, which has been attracting potential customers every day, the spokesman said.

Automotive News appoints Flax service editor

Arthur Flax has been promoted to service editor of Automotive News. He has been assistant truck editor since joining the staff in 1984.

Flax is a graduate of the University of Maryland where he studied journalism and mechanical engineering. He worked for Transport Topics, a trucking industry publication in Washington, for four years before joining Automotive News.

Arthur Flax

As service editor, Flax succeeds Jack Walsh, who retired Jan. 1 after 28 years with Automotive News.

"We have always had a strong service section," said Andrew R. McGill, editor of Automotive News, "and I'm sure Art will carry on the high standards set by Jack Weed, Ken Kelley, Frank Gawronski and Jack Walsh."

The Very Finest!

The 1986 Cadillac Seville and a SKY-TOP® Power Moonroof.

The style and elegance of the new Cadillac Seville demand only the finest, the SKY-TOP Power Moonroof.

SKY-TOP Power Moonroof's luxurious appearance and smooth, quiet operation offer exactly what Cadillac owners expect. And SKY-TOP's extra large opening and unique design guarantee the widest viewing area with the least headroom loss.

Offering a variety of features and options, including a push-button venting system, the SKY-TOP Power Moonroof is the most versatile moonroof available.

Over 90 SKY-TOP Installers nationwide offer excellent service, backed by a 12 month, unlimited mileage, parts and labor warranty. For our brochure and the name of your nearest installer, call SKY-TOP today.

One Day Auto Lease Sales Training Seminars

TOPICS

- New Profit Opportunities
- Developing a Business & Marketing Plan
- Lease Sales Management
- Lease Selling Skills
- Shopping Lease Sources
- Lease Rate Construction
- Prospecting, Networking, and Referrals
- Telephone "The Lease Life Line"
- Selling the Lease with the Numbers
- Lease Tracking & Lease
- The Art of Credit Management
- Showroom Conversion

PROGRAM DESCRIPTION

Leasetrack has developed and produced the first controlled selling skills training and management system that is integrated with today's sophisticated brokered leasing plans.

The Leasetrack Auto Lease Sales Training Seminar will help dealership and leasing company executives, managers and sales people attain lease selling proficiency and competence. You will learn nuts and bolts, "Do's" and "How To's" in a no-nonsense management systems approach that works!

SEMINAR DATES

Columbus	Mar. 25	Marriott	Buffalo	Apr. 22	Marriott
Wash.	Mar. 26	JW Marriott	Albany	Apr. 23	Marriott
Phila.	Mar. 27	Phila. Airport Marriott	NYC	Apr. 24	Marriott

Seminar fee: $295 per person, $245 each additional person
Enrollment is limited. Register immediately.

Volvo's product plans advance

Continued from Page 12

windshield and instrument panel. It can be built to one-person, as well as two-person operations.

The right side can be designed for sitting and standing. A partition is available in the middle of the cab to protect the driver from cold or rain. And there's an optional dual steering control.

The cab is 95.5 inches wide and is fully galvanized for extra corrosion protection.

Officials said they worked with leading refuse handlers to develop a vehicle that would reduce operator fatigue and labor costs.

The Xpeditor Low Entry trucks are being built in Ogden, Utah, and go into full production in April.

Officials also noted that a two-year effort to reduce the weight of Volvo's N-series trucks has resulted in a lighter chassis.

The chassis weight of the Volvo N1225 was reduced 1,660 pounds by using a higher-tensile steel, lightweight front springs, brakes and on/off road suspension, aluminum air and fuel tanks and a single fiberglass battery box.

Volvo also increased the axle capacities in its N Series. The capacity for the Volvo N1228 is now 20,000 pounds. The Volvo N10/12 axle-forward trucks now feature an 18,000-pound capacity.

Volvo N Series models are retailed through 117 dealers in the U.S. The company had wholesaled 1,479 N models by the end of 1985, and retailed 1,322 of them.

The N series was introduced in 1984 and accounted for 700 more orders than Autocar in its first year on the market, according to Gus Gustaffson, product marketing manager.

Volvo White also reduced the chassis weight of its Autocar DS64 to 14,400 pounds.

Weight reductions came from using a new frame and crossmember configuration, along with optional lightweight front frame extensions and rear suspension brackets.

Load capacity was maintained through new lightweight tapered front springs.

The Autocar is geared to mixer, dump and refuse applications.

Volvo also has a new gear-driven Flywheel Power Take-Off (PTO) to improve the efficiency and cost effectiveness of its concrete mixers, refuse collectors and other trucks using auxiliary equipment.

Designed for the Volvo N12 trucks, its Flywheel PTO is built to eliminate the need for a front-mounted PTO, which adds weight and length to the vehicle.

Volvo White chief expects major changes in Class 8

Continued from Page 12

dealers is the growth of leasing. More than one-third of full-service leasing is controlled by major lease companies, with finance leasing accounting for another 8 to 10 percent.

While dealers have the smallest portion of the leasing business, they are becoming more familiar with it and are gearing themselves more to it every day, Berggren said.

Although the U.S. is the forerunner and leader in full-service leasing, it is getting attention in other parts of the world, he added.

The company has benefited from the growth of conventional models at the expense of forward-control trucks.

The popularity of high cabovers has declined steadily since 1982 (the year Volvo introduced its conventional Integral Sleeper), while medium and long conventional sales have been increasing and are expected to continue to increase.

That helped push Integral Sleeper sales over 3,000 in 1985, a 60-percent increase. In total, Volvo White now has 11.7 percent of the medium and long conventional business.

Sales of its Autocar and Volvo construction vehicles profited from a strong resurgence in that market. They rose 60 percent last year, according to officials.

They added that the N12 model accounted for slightly more than 500 "true" construction sales in 1985, including some to the logging industry.

Volvo White's Class 7 market share is still a meager 1.6 percent, and represents a major challenge for the company. Officials said they were planning new products to increase their sales in that segment.

The company's parts sales were just under $100 million last year, an 8 percent increase over 1984.

Volvo's U.S. operation accounted for 32 percent of its worldwide truck sales last year, the U.S. being its largest and most successful truck market.

Rockwell International will supply single-reduction drive axles for Volvo Truck's new European FL614 medium/heavy 4x2 truck and tractor models.

The Rockwell P-140E axle, redesignated EV76 by Volvo for this application, will be offered as standard equipment on three models of the FL614. The axle is rated at 20,000 pounds capacity and handles the power produced by Volvo's TD61 6-cylinder turbocharged engine.

The axle will be offered initially only in Europe.

The axle features hypoid "Generoid" gearing; metric design; precision-forged differential gearing, and extended life seals.

Insurance group seeks ban on truck-brake disconnect

WASHINGTON.—All trucks should have operable front brakes, according to the Insurance Institute for Highway Safety. NHTSA requires them on new truck rigs, but its sister agency within the Department of Transportation—the Bureau of Motor Carrier Safety—allows front brakes to be removed from three-axle tractors.

In order to resolve this contradiction, IIHS has petitioned DOT to prohibit the removal of front brakes from any trucks and to require reinstalling them if they have been removed or disconnected.

IIHS also requested an education program for truckers, some of whom believe that having no front brakes helps maintain control in emergency situations.

IIHS cited its own tests along with those made by NHTSA to show that making front brakes inoperable not only adds to loss of control but increases emergency stopping distances.

For example, while passenger cars typically can make emergency stops from 55 MPH in about 135 feet, an empty tractor-trailer without front brakes can take twice as much distance, and a tractor alone without front brakes can take 2½ times as much.

As a further reason for requiring BMCS to change, IIHS cited the example of many European countries. Regulations of both the Economic Commission of Europe and the European Economic Community require not only front-axle brakes but also that front wheels lock before rear wheels.

Samara: It's a whole Lada car for the ruble

By Richard Feast

Never has one of the Soviet Union's Ladas attracted so much attention as at the recent international auto show in Brussels. The occasion marked the Western debut of a new generation front-wheel-drive model that's been talked about at least five years and was expected to go into production three years ago.

Called Samara, the model was developed under the label 2108. What emerges is a modern-looking three-door hatchback, indistinguishable in profile from a dozen others except for a peculiar slotted grille.

What attracted the attention of those attending the Belgian show was Samara's price: the equivalent of $4,180. To put that into perspective, the price of a base Ford Escort in Belgium is $5,750. Even the cheapest Seat Ibiza costs $4,385, and Spanish production costs are the lowest in Western Europe. A U.S.-style Yugo 55GLS carries a $4,100 sticker in Belgium.

It's known that Samara is the recipient of Porsche engineering expertise. What isn't known is the degree of input by the West German auto company. Soviet officials insist it is a domestic design that Porsche refined and helped to pass Western safety and emission regulations. However, some European importers believe the entire engine and transmission are the work of Porsche.

Whatever the German company's input, Samara promises better dynamic qualities and levels of refinement than the rather agricultural nature of the first-generation Ladas which were based on the design of the rear-wheel-drive Fiat 124. The newborn sophistication of Samara worries Western auto makers who now face a technically competent Soviet car with a throwaway price they can't match.

Samara is now going on sale in the Soviet Union, and will be launched in Western European markets starting in June.

Initial volume will be small; 20,000 were built for the domestic launch, and the factory in Togliatti is committed to dedicating only 20 percent of its total production to the new car during the next two years. This means Samara output through the end of 1987 should total no more than 190,000. The remaining 1.25 million cars turned out at Togliatti will be old-style models.

It's assumed, however, that over the longer term Samara will become Togliatti's staple model. A five-door hatchback and four-door sedan are a little over a year away from introduction.

Given its volumes and launch plans, Samara is unlikely to have much impact on Western markets until the end of this decade. The initial aim is to return to the 120,000 annual sales level in the West that Lada enjoyed but a few years ago.

Final 1985 Western sales figures for Lada are not yet in but are estimated at 85,000. Volume has been dropping steadily for some years, partly because of the car's increasing age. Political developments in Afghanistan and Poland have not helped Lada field representatives in the West, and increasing unemployment in Europe, particularly among blue-collar workers who are Lada's main customers, reduced spending power there.

AUTOCAR

Would you buy a Samara from this man? He's Vladimir Tcherkassov, president of Scaldia-Volga, Lada importer in Western Europe.

Samara is an important element in the plan to reverse the sales decline. Equally important are the Soviet Union's declared plans to update car factories in Moscow and the Ukraine, as well as the models they produce. To this end they are discussing engine factories with Volkswagen and Renault, and production equipment with Fiat.

Precise timing of future products is difficult to predict, but it's almost certain there will be a line of three basic models by the end of the decade: the Escort-size Samara; a baby Zaz similar in size to Fiat Uno; and a Moskvich about the size of General Motors' J-car.

Each will retail for about 30 percent less than an equivalent European or Japanese model, enabling the Soviet Union to compete, in the West at least, directly with South Korean-built products.

So far, Lada has been the only Soviet car to be showcased seriously in Western Europe. Its importers there are hoping for a broader range to offer their customers. The Soviet product plans, a thawing of East-West relations following the Geneva summit and a perennial Soviet desire to earn Western currencies seem to set the stage for a more serious assault on Western markets.

Whether that assault includes the U.S. is uncertain, although Satra Corp., New York, which holds the U.S. franchise, at least in name, has 40 acres of land at the port of Savannah, Ga.

Moreover, the Soviet export organization AvtoExport is well aware of the positive American public reaction to introduction of the Yugoslavian-made Yugo in the U.S. Vladimir Tcherkassov, former head of AvtoExport and now president of its wholly owned Scaldia-Volga operation in Brussels, says, "There is no real plan to sell in the U.S. at present, but the idea is always under review."

One successful Lada importer speculates that AvtoExport would like to press ahead with U.S. exports, but is held back by apprehension over American public opinion. However, Samara will reach North America through the recently restructured Lada importer in Canada.

Samara's main thrust at the start will be in Western Europe, where Lada's market share has been falling steadily the past few years, and was about 0.8 percent last year. While complete figures for 1985 are not yet available, leading importers of Ladas in the first half were France (10,300), Belgium/Luxembourg (8,000), United Kingdom (6,600), Finland (6,000), and Netherlands and West Germany (4,500 each).

These main export markets are now gearing up for Samara's arrival and the promise of other So-

Samara

Continued from page 37

viet models later this decade. This includes privately owned importers in France and the U.K., as well as those controlled by AvtoExport and Scaldia-Volga.

Scaldia-Volga is responsible for distribution in Belgium, Luxembourg, the Netherlands and West Germany. The arrival six months ago of Tcherkassov, who established the company in 1961 and ran it for 12 years, indicates the importance placed on the new model program by AvtoExport. So does the opening of a new administration center in Brussels last year, and a new parts and import center in Antwerp two years ago.

Engelbert Wichelhausen, commercial director for West Germany — Western Europe's largest market — predicts annual sales of 22,000 Ladas by 1988; this compares with an estimated 8,300 last year.

AvtoExport also has enormous potential in two other big European markets, Italy and Spain. Because of Lada's similarity to the Fiat 124 and Spanish-built Seat 124, there were grade restrictions on its availability in those countries. Spain also protected its domestic industry by limits on imports, a practice that must wind down as full membership in the Economic Community becomes effective.

Despite Lada's heritage, design of the new breed of passenger cars emerging from the Soviet Union owes nothing to Fiat or the Italian company's former partner, Seat.

Samara has an all-new 1.3-liter single overhead camshaft engine; a 1.5-liter version will follow soon. The transversely mounted engine has an aluminum cylinder head and an electronic ignition driven directly off the camshaft. The 1.3-liter develops 65 horsepower, enough for a top speed of 92 mph and acceleration from zero to 60 mph in 14.5 seconds.

Its official fuel consumption numbers are the equivalent of 42 mpg at 56 mph, 31 mpg at 75 mph and 20.4 mpg on the urban cycle.

The car is 157.7 inches long with a wheelbase of just under 97 inches. At 1,985 pounds, it is comparatively light for a car designed to withstand the rigors of Russian roads and winters.

Front suspension uses McPherson struts. The rear axle is suspended on coil springs and located by trailing arms. Brakes are front disc/rear drum. Steering is rack-and-pinion. The 1.3-liter version has a four-speed transmission, the 1.5-liter a five-speed.

Samara is sold in Belgium with a six-year anti-rust warranty. ■

Borg-Warner lists 3 moves in auto operations

TROY, Mich.—Three major management moves have been announced by Borg-Warner Automotive, Inc.

Golden E. Hullinger has been promoted to vice president—Borg-Warner Automotive, with responsibility for worldwide business development, marketing and advanced engineering.

Hullinger previously had been vice president—general manager, Climate Control Systems and president, Warner Ishi Corp., a joint venture.

Frederick E. Lueck, vice president—marketing/advanced engineering, announced his retirement, effective April 1.

Lee M. Gardner has been promoted to vice president—general manager, Borg-Warner Automotive Transmission Systems in Muncie, Ind.

He had been vice president—manufacturing operations at the Transmission & Engine Components Unit of Borg-Warner Automotive.

MVMA undertakes study of side-impact collisions

DETROIT.—An intensive study of side-impact collisions—the cause of one of every four traffic deaths—has been launched by the MVMA.

MVMA said that while the three-point safety belt is the best system to protect occupants from death or serious injury in a side-impact collision, manufacturers recognize that many people still do not wear their belts.

"These tests, at a cost of nearly $1 million, are in addition to the ongoing research work by our member companies and by the NHTSA," said MVMA President Thomas H. Hanna. MVMA's program involves two procedures:

1. A moving barrier test uses a barrier with a honeycombed aluminum front facing the side of an off-the-assembly-line standard sedan. The car is stationary. The barrier inflicts damage to the car, reflecting what occurs when one car is hit by the front end of another vehicle.

A special dummy, developed by NHTSA, is in the front seat. Instrument readouts of the dummy are analyzed to predict type and severity of injuries that would occur to a person.

2. A ram-like device strikes an interior component like a door or a window pillar. Mechanical readouts from the "ram" indicate the potential for injuries to an occupant.

A major benefit of this test is that it can be employed long before a complete vehicle prototype is available, MVMA said. That means designs can be tested, changed, retested and changed again during the development of a new car.

Hanna said the MVMA activity already has provided manufacturers with data that has been used for better side-impact protection.

"One example of the benefit of these procedures is a new door-hinge design one manufacturer has developed that reduces the likelihood of a door breaking loose in an accident," he said.

Hanna added that the tests also sparked changes in door welding spots.

Contractors performing the tests for MVMA are MGA, Inc., Akron, N.Y.; Calspan Corp., Buffalo, and the Transportation Research Center, East Liberty, Ohio.

"As this program continues, we expect to learn more and more about how passenger protection can be improved with energy-absorbing materials and body structural changes in the car," Hanna said.

"We believe the tests will help provide automotive designers with better tools to evaluate the safety performance of their products in the real world of side-impact accidents."

Potter named to EPA post

WASHINGTON.—J. Craig Potter, a former Interior Department official in charge of clean air programs within the nation's park system, has been confirmed by the Senate as EPA assistant administrator for air and radiation.

Potter's division has responsibility for setting and enforcing emission standards for cars and trucks as well as other mobile sources of emissions.

Potter left the government in July, 1985, to become acting executive secretary of the National Fish and Wildlife Foundation.

AMC Eagle up $117; tinted glass standard

SOUTHFIELD, Mich.—American Motors has made tinted glass standard on its four-wheel-drive Eagle models and has raised prices $117. That was the price of tinted glass as an option.

New prices effective March 3 are: Eagle four-door sedan, $10,836; Eagle 4-door wagon, $11,606; Eagle Limited 4-door wagon, $12,296.

Tips offered on marketing in California

LOS ANGELES.—California marketing has to be executed in California to be successful, a veteran of the state's marketing wars told a group of auto writers here.

Vic Olesen, of Vic Olesen & Partners, an agency handling Chevrolet's advertising here, told the West-Coast chapter of the International Motor Press Assn.:

"I stand before you as the 500th car representative from Detroit" in the California marketing campaigns. "People have been sent out here for 20 years because California wouldn't conform with the rest of the car-buying nation."

Oleson listed the key elements in the success of West-Coast programs: "You have to organize it from California. You have to have the proper organization. It has to be a well-coordinated effort with a methodology and you have to have an appropriate and flexible budget commitment."

Working with Chevrolet, Olesen said the California effort has to fold in between the national spillover and dealer association advertising. The most important element, according to Olesen, is to stress the individual nameplates.

"The perception out here is that Chevrolets are fairly dull, Midwest cars, the kind of things they (transplanted Californians) left behind," he said.

While the initial efforts have been on Camaro, Celebrity and Cavalier, Olesen said Chevrolet's program will begin focusing more on Sprint, Spectrum and Nova.

Unlike the national Nova campaign, which is moving away from the Best of Both Worlds theme, Olesen said the California program is highlighting the fact that the car is being built by the joint venture within the state.

In highlighting Sprint and Spectrum, Olesen said his agency has just completed an ad for the Sprint that underscores the fact that the car has the highest EPA rating.

—MATT DELORENZO

GM may build plastic minivan at Framingham

General Motors is eying its Framingham (Mass.) assembly plant as the likely assembly point for a new front-wheel-drive minivan, according to sources.

Although GM would not comment officially, reports indicate that Framingham is the top candidate to land the minivan for 1988.

Plans are to build the plastic-body van at a 60-per-hour rate, putting two-shift annual capacity at about 230,000 vehicles. Production could start in late 1987 or early 1988. Framingham would be the sole source of the new van.

A $240 million basecoat/clearcoat automated paint facility is under construction on a 450,000-square-foot site adjacent to the Framingham facility. Completion is expected by August, 1987.

Framingham presently produces two GM A-body cars, Chevrolet Celebrity and Oldsmobile Cutlass Ciera. The A-body platform will be used as the base for the new minivan. Both Chevrolet and Pontiac are expected to market versions of the vehicle.

Auto makers schedule best week this year

By Kathy Boyer
Detroit Reporter

Scheduled domestic auto production last week was the highest of any week this year.

The total of 177,621 cars topped the previous peak of 177,528 for the week ended Jan. 25.

Last week's estimate was 4.07 percent more than the previous week's 170,667 and 4.72 percent more than the year-ago week's 169,617.

So far this year, 1,279,102 cars have been assembled, 1.43 percent below the 1,297,682 completed last year at this point.

Companies shared last week's scheduled production as follows: General Motors, 54.69 percent; Ford Motor Co., 21.73 percent; Chrysler Corp., 16.55 percent; Honda of America Mfg. Co., 2.11 percent; New United Motor Mfg., Inc., 1.67 percent; American Motors, 1.27 percent; Nissan Motor Mfg. Co., U.S.A., 1.02 percent, and Volkswagen of America, 0.96 percent.

After being idle for several weeks for inventory adjustment, AMC's Kenosha plant resumed production Feb. 17.

Ford slated overtime Saturday (Feb. 22) at its plants in Wayne, Mich.; Wixom, Mich., and Kansas City.

Chrysler scheduled Saturday overtime at its St. Louis (No. 2) and Jefferson (Detroit) plants.

Daily overtime this week (Feb. 24) is slated at Chrysler's Belvidere (Ill.) and Newark (Del.) plants.

Canadian output moves past 1985

Year-to-date output by Canadian car and truck makers has surpassed last year's production for the first time.

So far this year, 151,658 cars have been built, 0.82 percent more than the 150,418 completed last year at this point.

The truck makers' year-to-date total of 138,871 is 2.04 percent more than the 136,095 assembled at this time last year.

Last week's scheduled build of 23,165 cars was the highest of any week since the 26,733 completed the week ended Dec. 14.

The targeted auto output last week was 8.88 percent more than the previous week's 21,275 and 18.12 percent more than the year-ago week's 19,611.

Estimated production of 19,197 trucks last week was the highest since the week ended Dec. 7 when 19,256 were produced.

Last week's truck build was 1.34 percent more than the previous week's 18,943 and 2.23 percent above the year-ago week's 18,778.

Truck output reaches 1986 peak

Scheduling their best weekly build so far this year, U.S. truck makers last week pulled farther ahead of 1985 production.

Last week's scheduled output of 73,419 trucks was the highest since the 74,162 completed the week ended Dec. 21, 1985.

Year-to-date, 528,734 trucks have been assembled, 5.93 percent more than the 499,121 built last year at this point. The lead 4.65 percent a week earlier.

Last week's targeted production was 2.41 percent more than the previous week's 71,688 and 5.05 percent better than the year-ago week's 69,890.

General Motors scheduled Saturday (Feb. 22) overtime at the following plants: Flint (Nos. 1 and 2); Janesville, Wis., and Lordstown, Ohio.

Ford slated overtime Saturday at its Twin Cities and St. Louis plants.

U.S. rights to Romanian car subject of 3-way squabble

By John A. Russell
New York Staff Writer

NEW YORK.—Even before the first Romanian-built Dacia cars arrive in the U.S., questions have surfaced. The biggest one is: Who has a contract, or agreement, with the Romanian factory, Auto Dacia, to be the official importer?

Two companies say they have the import rights and a third is still negotiating with the manufacturer under a protocol agreement.

And all three companies have documents supporting their claims, either in the form of a contract or protocol agreements.

Yet, high officials of the Romanian embassy here stated categorically last week that no contract exists. And that is the crucial element in the matter for only one company claims to have a valid contract—Auto Dacia of America.

Dacia hit the headlines last November when it was reported that a contract had been signed in Paris for the import rights to its products in the U.S. At that time the name of the company was not known.

However, at the NADA convention last month, Auto Dacia of America made its first public appearance. Ole Spaten is chairman of the company; Michael R. Conforti is president, and John Trotman is executive vice president. The company is based in Miami. It is the company that claims to have a contract signed in Paris.

Spaten told Automotive News that the master contract was signed and there are nine subcontracts which are still to be signed. The subcontracts cover three geographical areas—the U.S., Mexico and the Caribbean—for three vehicles. They are the Aro, a four-wheel drive vehicle; the Dacia and the Olcit, a car manufactured under a joint-venture agreement between Dacia and Citroen.

The signers of the contract were Spaten, as chairman of his Swiss company, Sveltec; Milton Garcia, director of the export department of Auto Dacia, and N. Georges Maritzia, head of the liaison office of Marimex, a firm own by Dr. Constantino Dragon, a Romanian industrialist.

Spaten said Dragon's firm was instrumental in setting up the agreement but its exact position in this agreement is unknown.

Both Spaten and Trotman said the nine annexes will be signed between March 11 and March 20.

At the NADA convention, the Auto Dacia of America staff was attempting to recruit dealers. The company also is trying to have the Aro certified for sale in the U.S. by September with the other cars following.

According to James O'Meara, another Auto Dacia of America executive, the company intends to ask dealers for $59,900 for parts, tools and signs which will cover all three lines, and there will be letters of credit involved since the firm expects dealers to maintain a 90-day supply of cars.

O'Meara said the company expects to sign 150 dealers nationwide by the end of 1986.

However, much of that planning could go up in smoke. Officials of

Floods catch 1,300 cars at Ford depot

By Matt DeLorenzo
Los Angeles Reporter

SAN FRANCISCO.—More than 1,300 Ford, Lincoln and Mercury cars were caught in a flood at a Benicia vehicle-processing facility during the torrential rains that swept Northern California.

Dealers in the Napa Valley also were socked by the storm, with several showrooms closed for atleast a week because of the flood.

Insurance adjustors are going over the Ford Motor vehicles at Benecia to determine the extent of the damage. The flooding occurred at Hadley Trucking, at a railhead terminal across the bay from San Francisco.

"We moved as many as we could away from the site to avoid flooding," said Richard Dewey, a Ford spokesman. The extent of the damage has yet to be determined, but Dewey added, "We're going to have some cars that are totaled."

Art Eichen, Hadley's terminal manager, said the water was three to four feet deep in some places on the lot, which is located next to a small stream. The 10 days of rain dumped as much as 23 inches on the area.

Eichen said the water has drained off and the facility is in operation, although repairs must be made to water-damaged buildings. He said they were able to move 400 to 500 cars from the lot

NHTSA funds won't be sliced, Dole declares

By Al Fleming
Industry Editor

NHTSA will not be affected by the Gramm-Rudmann law or other federal budget-trimming measures, Transportation Secretary Elizabeth H. Dole said last week.

At a Detroit press conference prior to her speech before more than 5,000 attendees at the annual banquet of the SAE International Congress and Exposition, Dole said, "All safety across the board has been protected."

She said two of DOT's "labor intensive" agencies—the Federal Aviation Administration and the U.S. Coast Guard—are likely to sustain "support personnel" cutbacks, but added, "We will be shifting funds between (DOT agency) accounts to make certain that safety" is not impacted.

Asked if NHTSA stood to lose any funds in the shifting, she replied that budget cuts might affect "one of the other modes, bu' not NHTSA."

In another area, Dole said she is looking "carefully" at a National Academy of Sciences study on the nation's 55-MPH speed-limit law.

Panelists participating in the two-year study were unanimous: 55-MPH should continue, but

GM's Mair prepares to retire from 'most favorite' job

By Michelle Krebs
Financial Editor

When General Motors Vice President Alex Mair was asked as a child what he wanted to be when he grew up, he answered without hesitation: Chief engineer of Chevrolet.

"I didn't know what that job was, but that was what I wanted to be," Mair recalled during an interview with Automotive News.

Born the son of a Chevrolet tool-and-die maker in Flint, Mair did in fact become Chevrolet chief engineer. He then became general manager of GMC Truck and Coach and Pontiac divisions and, finally, head of GM's Technical Staffs Group.

After 47 years with GM, Mair retires April 30 at GM's mandatory retirement age of 65.

Mair recalled that competition in the auto industry was intense during the 1920s. Out of that competition, Chevrolet rose from a very small company to the world's sales leader.

"Living in Flint," Mair said, "there was a great loyalty to General Motors and to Chevrolet and Buick. In our family, it was that way. There was an internal pride in working for this very great company."

Mair attended General Motors Institute and joined Chevrolet in 1939. His first job was working on the famous Chevrolet Blue Flame engine, introduced in the 1937 model year. Mair would place that engine—with only six others—in the engine Hall of Fame. He became Chevrolet chief engineer in 1965.

The energetic and affable Mair lists among his favorite GM jobs those as Chevrolet chief engineer, Truck and Coach general manager and Pontiac general manager.

However, his latest job has been his "most favorite." Since 1978, Mair has headed GM's Technical Staffs Group, which includes the Design Staff, Advanced Engineering Staff, Current Engineering and Manufacturing Services Staff, the GM Research Laboratories and the Patent Section.

Mair said his love for the job and the exciting, challenging times of today's auto industry make it difficult to leave. He has no current plans to do consulting for GM during his retirement.

Mair, who has worked in the auto industry for nearly half of the automobile's 100-year existence, said the industry is in the midst of an "incredible revolution."

"In this job," he said, "the work effort required to maintain GM's world leadership in automobile and truck production is unprecedented. It wasn't even like this during the Depression. The only time this kind of effort was put forth was during World War II.

"The need is just as high now, but not everybody seems to have felt that at GM," Mair said.

As a result of intense international competition, Mair sees GM and the auto industry on the threshold of some major technological breakthrougns.

Among them is GM's superpowerful magnet, Magnequench. The magnet reduces the size of small motors.

"The reason it's significant is that it has a large impact, not just on GM but on our country and the world," Mair said. "From the standpoint of use of energy resources in the world, it has a significant impact for the long term and forever."

Mair likens the impact of Magnequench, new machining methods and new materials—particularly plastics—to the impact of other technological innovations that changed the world. Among them, he includes the refrigerant Freon, quick-drying paints and leaded gasoline.

When many of those technological innovations come to fruition,

Makers notch record sales, 2nd-best profit

By Michelle Krebs
Financial Editor

U.S. auto makers collectively recorded their best year ever for sales and their second best year for profits in 1985.

Profits for the Big Four makers totaled $8.02 billion, down 18 percent from the record $9.82 billion in 1984.

Combined sales for 1985 set a record of $174.44 billion, up from $160.04 billion in 1984, the previous peak.

Individually, General Motors recorded its best year ever for sales and second-best year for profits in 1985.

GM's net income was $3.99 billion, down 11 percent from $4.52 billion in 1984, GM's best year ever.

GM's sales were $96.37 billion, up 15 percent from 1984's previous record of $83.89 billion.

Factory unit sales increased 13 percent to 9.3 million units in 1985.

Ford Motor Co. earned $2.52 billion for its second-best year ever and sales set a record of $52.77 billion.

Ford profits were down 14 percent from 1984's record high $2.91 billion. Sales were up 1 percent from 1984's $52.37 billion.

Factory unit sales were 5,634,000 units, down 33,000 from 1984.

Chrysler Corp. reported a profit of $1.64 billion for its first full year as a taxpayer since 1976. Chrysler also suffered strikes in

AMC loses $125 million as '85 sales drop 5 pct.

By Michelle Krebs
Financial Editor

American Motors said it lost $125 million for 1985.

That compares with a profit of $15 million in 1984, which included a $4.5-million tax credit.

Sales for the year were $4.0 billion, down 5 percent from $4.2 billion in 1984.

"Although the losses in 1985 were disappointing," said AMC President Jose Dedeurwaerder, "there was substantial improvement in the second half of the year. The second-half loss of $25.8 million compared with a $99.5 million loss in the first half."

Dedeurwaerder noted that 1985 financial results were adversely affected by the intense competition in the subcompact passenger-car market which caused significantly lower volumes and high merchandising costs because of financing incentives.

"We were encouraged in 1985 by the excellent sales of our Jeep products," Dedeurwaerder added.

Factory vehicle sales were 391,769 units, down 11 percent from 1984.

North American factory sales were 354,795, down from 1984's 408,345. Jeep sales in North America jumped to 217,806 units from 171,036. But car sales dropped to 136,989 from 237,309.

For the fourth quarter, AMC lost $6.7 million, compared with a profit of $3.1 million in the same quarter a year earlier, which included a $1.3-million tax credit.

Sales for the quarter were $1.13 billion, up from 1984's $1.06 billion.

Ruling appears months away as bitter X-car trial ends

By Helen Kahn
Washington Bureau Chief

WASHINGTON.—The trial over allegedly defective 1980 X-cars ended after a run of more than two years with the government and General Motors locked in bitter disagreement.

Decision by U.S. District Judge Thomas Penfield Jackson is probably months away.

In August, 1983, NHTSA was so concerned about the hazards of what it called premature rear brake lockup (which GM does not consider a defect) in some 1.1 million 1980 X-cars that it took GM to court before even reaching a formal finding of defect—a tactic never before used by NHTSA.

Today GM estimates there are between 700,000 and 800,000 of the 1980 X-cars (Chevrolet Citation, Pontiac Phoenix, Oldsmobile Omega and Buick Skylark) left on the road. GM stopped building X-cars in May, 1985.

The eight-year statute of limitations has only two years to go, and the appeals process can be lengthy.

There remain several X-car derivative suits plus one pending class action suit in the District of Columbia where damages have been estimated at some $1 billion.

If GM loses this case, it is likely to appeal; if the government loses, appeal is less likely. Government resources are getting smaller, and NHTSA Administrator Diane Steed is viewed as less of an activist than former NHTSA head Raymond A. Peck, under whom the action was initiated.

This is not merely the first and only safety-related defect case brought by the Reagan Administration, it is also unique in that it charges GM with "coverup" and "lying".

The government charges that GM, in at least 27 instances, concealed data or "lied" to NHTSA.

Please turn to Page 41, Col. 1

NHTSA stops routine notices of recall bids

WASHINGTON.—NHTSA has stopped routinely informing the public—through the monthly defect report—whenever it has sent letters to manufacturers of vehicles or auto equipment asking for a voluntary recall.

The Center for Auto Safety has vigorously protested the deletion of that information to Transportation Secretary Elizabeth H. Dole, who had not responded at press-time.

The center noted the number of such letters rose from 12 to 52 last year and charged that NHTSA was keeping citizens "in the dark." But the letters are available in the docket, and the requests to makers for recall come early in investigations.

The letters are sent when NHTSA first starts to scope a problem and before the start of a formal investigation, which NHTSA said it always announces in a press release.

Some NHTSA investigators were said to feel that their work could be hampered by too much early publicity before the start of a formal investigation that might use subpena power.

Rivals expected to ape GM blitz on ad rates

By Jesse Snyder
Crain News Service

Rivals expect General Motors' print media rate-busting efforts to trigger further demands from all auto makers and to spread to TV, radio, outdoor and other media.

GM's 14-point plan for improving print efficiency is drawing praise from other auto manufacturers. They expect any concessions or volume discount rates to be offered to them as well. Rivals aren't above gibing GM about a late start in efforts to cut media rates and agency compensation.

"We've been tough on magazine rates for a couple of years, and it'll get worse before it gets better,' said Louis Lataif, Ford Motor Co. sales operations vice president. Ford has already cut several magazines from its buy list for refusing its demands and has increased buys in books that cooperated.

"We'll be closing out segments of media who would think we'd never have the courage to do that —whether that's a whole network, a whole magazine, a whole newspaper or all of radio," Lataif said. "We have to go where the values are."

"This is good for all of us," said David Kerr, American Motors director of advertising and marketing planning. He also expects GM and other auto makers to go after rate concessions from non-print media.

Advertising agencies for Ford, Chrysler Motors, Toyota Motor Sales, AMC and other auto companies already have informally told major media that upcoming contracts will use GM pacts as a starting point.

GM spent $205.4 million on newspaper and magazine advertising in 1984, the last full year for which figures are available. But the next eight largest advertisers —Ford, Chrysler, Nissan, Toyota, Honda, AMC, Volkswagen and Mazda—spent more than twice that much: $432.3 million.

"I'm glad GM has finally entered the fray," said Lataif. His company, Ford, established most of the automotive category benchmarks on magazine discounts several years ago.

"I think when they saw what we'd won, they went after the same things," Lataif added. "They'll win more, just because they're bigger, and we'll all benefit."

At the heart of the struggle are profoundly different perspectives. Auto makers, especially the bigger-spending U.S. companies beset by foreign competition, view media as suppliers, little different than steel, tires, glass and parts makers—and ad agencies.

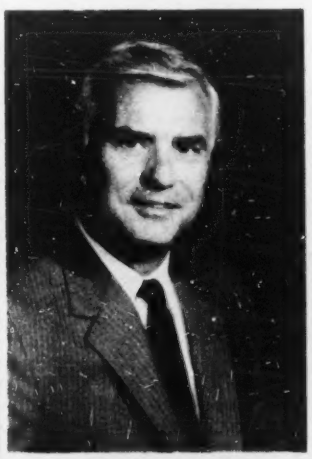
"If we send them a check, they're suppliers" is the attitude.

"When the rate of inflation is in the 2-3-percent range, there's no way to justify 6-8-percent hikes in media costs," Lataif said. "Our goal is to cut $2,000 out of the cost of an Escort and marketing may be able to contribute."

Publishers, looking at the Big Three's 1985 profits of more than $8 billion, say auto makers are demanding too much.

Several Japanese importers declined direct comment. Domestic auto makers outspend the largest four Japanese marketers 5-1 on print media, although a Japanese company may reach GM spending levels in certain specialty or regional publications.

Cadillac looks overseas to build image



John O. Grettenberger

By Michelle Krebs
Financial Editor

Cadillac plans to improve its image by establishing an international presence and selling more exclusive models, Cadillac General Manager John O. Grettenberger said.

It will display models at the Geneva International Motor Show, Grettenberger said in an Automotive News interview. Cadillac will be the only North American GM division present at the show, opening this week, and it will be the first time Cadillac has exhibited without other divisions, he said.

Grettenberger said more favorable exchange rates have created sales potential in Europe for the first time in many years. The potential is in Switzerland, Germany, Holland and Belgium, he said.

Cadillac's ultra-luxury Allante, the bodies of which are made in Italy, will be sold in Europe, although not immediately after its U.S. introduction. The required modifications are under way.

An Allante success in Europe would have a ruboff effect in the U.S., Grettenberger said.

He said Cadillac plans to enhance its position in the Middle East, traditionally a strong Cadillac market, through product demonstrations, dealer incentives and training and marketing assistance.

Cadillac also will promote its limousines more overseas. It recently sold its second batch to the People's Republic of China.

"They offer us an opportunity to get worldwide image and presence, not in great numbers but certainly in visibility," he said.

He said he is less interested in overseas volume than in the benefit that can be gained in the U.S. by international exposure.

"It used to be that we only considered Chrysler and Lincoln products as our primary competitors," he said. "That day is long gone, and it'll never be back. Mercedes, BMW, Audi and Volvo have become internationally recognized brands. They do limited volume in some countries and do very well in others, but they're accepted as being products that people around the world turn to for luxury transportation."

In addition, Grettenberger said, Cadillac will introduce more

Nissan, Calsonic plan test track in Arizona

CARSON, Calif.—Nissan Motor Corp. in U.S.A. has announced plans to build a $25-million test track in Arizona.

Nissan Research & Development, Inc., Ann Arbor, Mich., and Calsonic International, Inc., Irvine, Calif., have entered into a joint partnership to be called Arizona Test Center, Inc.

Arizona Test Center will build and operate the test facility on a 3,050-acre site near Casa Grande, Ariz.

The facility will be used to test Nissan vehicles and Calsonic products and it will be available to all Calsonic customers.

At first, the track will be used for hot-weather testing of air conditioning and engine performance. Later, it will be used for high-speed testing of performance and durability.

Toshio Maeda, executive vice president and chief operating officer of Nissan Research & Development, will also serve as president of Arizona Test Center.

Groundbreaking is scheduled for today (March 3). Plans call for the facility to include a wind tunnel. The test track itself is 5.6 miles long.

The oval test track will be banked for up to 130 MPH neutral speed.

Calsonic is a wholly owned subsidiary of Nihon Radiator Co.

DuPont prepares new line of paint for aftermarket

By Al Fleming
Industry Editor

TROY, Mich.—DuPont Co. will introduce a new line of automotive aftermarket refinishes in the second half of 1986.

At a press briefing at the DuPont Automotive Development Center here, Gene A. Gardner, the company's worldwide director for refinish, finishes and fabricated products, told a group of U.S. and European editors, "We've been developing the automotive finish of the future for the aftermarket . . . a whole new line of refinish products."

He said the new paint, trademarked Cronar, was developed specifically "to handle the needs of base coat/clear coat for the next decade."

Noting that base coat/clear coat has become a standard finish at General Motors, Gardner said GM is "converting one plant after another to deliver this European look, now that technology has made it possible to meet environmental standards."

Base coat/clear coat enamels became commonplace on most European and some Japanese assembly lines in the mid-1970s. They provide a smooth, glossy, mirror-like finish known as the "European look."

Gardner predicted that by the end of this decade, every car manufactured in the U.S. will have a base coat/clear coat finish.

According to Robert Aiken, director of automotive finishes for duPont, the company's base coat/clear coat topcoats currently are being used at GM's Lansing and Hamtramck plants, the GM-Toyota joint-venture plant in Fremont, Calif., and U.S. plants of Honda, Nissan and Volkswagen.

GM plants soon to be converted to the product, Aiken said, are Wilmington, Del.; Pontiac, and Fort Wayne, Ind. The latter two are truck facilities.

He said GM plants in Arlington, Tex.; Doraville, Ga.; Fairfax, Kans., and Leeds, Mo., have "proposed" to adopt base coat/clear coat topcoats.

Not only GM, but the entire U.S. auto industry is converting to enamel base coat/clear coat—some plants from lacquer, some from enamel systems, he said.

"GM, Ford, Chrysler and AMC are, or will be, using from medium to high-solids base coats and clear coats," Aiken said. "U.S. auto makers are converting existing plants, in most cases, timed together with conversion to a new model vehicle."

He said the conversions are motivated by the need for high solids to meet environmental regulations, "while at the same time maintaining or improving upon the appearance of low solids lacquers and enamels."

1913 Model T traded on Grand Wagoneer

CAPE GIRARDEAU, Mo.—Keele AMC-Jeep here recently accepted a 1913 Model T depot hack as a tradein on a Grand Wagoneer.

Larry Haertling, of Cape Realty, traded in the Model T. Cape Realty acquired it with the purchase of a collection of antique vehicles.

Mid-month sales top 253,000, alltime second-best for period

By Jenny L. King
Detroit Reporter

The sudden surge in new-car sales reported Feb. 11-20 seemed to indicate a last-minute interest in the recent round of incentives among procrastinating consumers.

With several low-interest-rate programs on various domestic models due to end shortly before the close of February, mid-month sales jumped 10.99 percent to the second-best total ever for the period.

But in the final days of the December-initiated incentives, new programs began to take shape as the auto makers sought to keep the sales momentum going.

The seven domestic makers reported Feb. 11-20 sales totaling 253,906, up some 25,000 units from 228,761 in 1985. It was second only to the record for the period of 272,784, notched in the banner year of 1973.

There were nine selling days in the period this year and last. The daily selling rate was 28,212 this year, up 10.99 percent from last year's 25,418.

Year-to-date sales reached 1,062,183, up 3.93 percent from 1,022,019 in 1985.

General Motors, which ordinarily captures well over half the domestic market, reported record sales for the period along with a year-to-year increase of 18.53 percent.

GM's domestic sales climbed to 148,068 from 124,924. The previous GM best for mid-February was 146,165, posted in 1973. The company gained nearly four percentage points in share of the market this year.

Ford Motor Co. sales were up 5.69 percent, to 64,274 from 60,813. Chrysler Motors reported period sales of 30,683, a decline of 13.86 percent from 35,619 a year earlier.

American Motors released a sales estimate of 2,000 units for the period, down 28.57 percent from 2,800. Volkswagen's months-long string of increases was snapped in mid-February with a 6.26-percent decline to 1,991 from 2,124. Honda was up 60.94 percent, to 3,993 from 2,481, and Nissan had sales of 2,897

†—Estimate

GM and Honda were the only makers to increase their market shares over year-ago holdings. GM advanced to 58.32 percent from 54.61 percent. Honda expanded to 1.57 percent from 1.09.

Ford dipped to 25.31 percent from 26.58 percent. Chrysler was off to 12.08 percent from 15.57 percent. AMC dropped below the one-percent mark to 0.79 percent compared with 1.22 percent a year ago. VW earned 0.79 percent, down from 0.93 percent, and Nissan had 1.14 percent of this year's market.

Sales of individual makes for the period included two records: Oldsmobile was up 36.49 percent, its 37,279 sales surpassing the former record of 35,110 set in 1984. Cadillac, up 33.17 percent to 10,439, broke its former record of 9,669, also set in 1984.

Other winners were Ford, up 8.71 percent; Mercury, 2.86 percent; Chrysler, 0.16 percent; Chevrolet, 10.95 percent; Pontiac, 33.46 percent, and Honda, 60.94 percent.

Sales declines showed up at Plymouth, off 24.64 percent; Dodge, 13.82 percent; Lincoln, 9.40 percent; Buick, 4.6 percent; AMC, 16.67 percent; Renault, 30.00 percent, and VW, 6.26 percent.

Chevrolet's Cavalier was the top-selling nameplate Feb. 11-20. Second to Cavalier sales of 16,039 was the Celebrity total of 13,834, followed by Oldsmobile Cutlass Ciera at 13,528, Ford Escort at 13,086 and Ford Tempo at 10,915.

Who will import Romania's Dacia?

Continued from Page 1

the Romanian embassy here told Automotive News that the contract was signed in Paris, but it was subject to the approval of the Auto Dacia board of directors. That board and the government refused to approve the contract.

Minister-Counselor Toader Rapanu, of the Romanian Embassy, said no one received a contract for selling autos in the U.S.

Nicolae Perhaita, first economic secretary of the embassy, agreed there was no contract in existence today. He said it was all done under condition of approval by Auto Dacia, which was not granted.

He said that when they contacted Romania initially upon the first report of the contract, even the Minister of Foreign Trade denied the existence of the contract. Perhaita maintained that Spaten and his company were notified that the contracts had been rejected.

Spaten denies this.

However, Perhaita was firm on one point. Speaking for the Romanian Government, he said explicitly that "we do not have contracts." He added that there are competitors for the contract who have protocols, but Auto Dacia of America is not a contender.

Last week, Automotive News learned of the two existing protocols. One is with North American Import/Export Co., Inc., New Paltz, N.Y., headed by Louis Marton; the other is with Bricklin Industries, headed by Malcolm Bricklin.

Both companies and their executives have been expressing dismay over the turn of events starting in November. Yet both have assurances from Auto Dacia in Romania that no contract exists.

In the case of Marton's firm, it goes even farther. The company has a letter from Auto Dacia (Romania) to the EPA Certification Division, which Marton said was filed with the EPA on Jan. 10. The Romanian firm said in the letter, "We have entered into a long-term agreement for the importation, sales, marketing, service, parts and engineering in the United States with North American Import/Export Co., Inc."

Perhaita confirmed that letter, saying, "Mr. Marton has the agreement with Auto Dacia for importing. He has the letter with Romanian approval."

But there is a proviso to that as well. Marton has a protocol agreeing to the importing of the Dacia cars conditioned upon successful EPA and NHTSA certification.

But the letter adds another element. Officials at the EPA have told Automotive News that while anyone can certify automobiles for importation, such a letter would imply that Marton is the representative of the manufacturer.

The Marton letter was signed and the protocols executed on Dec. 21, 1985, nearly two weeks after the Nov. 28 contract signing in Paris.

There also is the series of protocols with Bricklin Industries. Those have been signed over a period of months, again conditioned upon certification.

Perhaita termed those protocols preliminary steps, and he said the protocols are not contracts. He said that when certification is completed, there will be more discussions.

However, Automotive News learned that Auto Dacia officials from Romania will be visiting Bricklin Industries in the near future, and there are Telex messages spanning several months stating that no contract has been signed. The messages are from Auto Dacia in Romania.

Spaten said last week he is confident that his contract is valid and that he will go to Paris this week to consult with his attorney.

Steve Marton, son of Louis Marton and vice president of North American Import/Export Co., said he believes his company has an agreement.

Bricklin had no comment.

Mair to retire after 47 years in service of GM

Continued from Page 1

Mair won't be at GM to see them.

He will be at his marina on Michigan's Lake St. Clair or in Three Rivers, Mich., running the hydro-electric plant he bought four years ago. Built at the turn of the century, the plant today provides supplementary power to the city of Sturgis, Mich.

Throughout much of his career, Mair has been interested in energy, particularly since the oil crisis of the early 1970s, which triggered research into alternative energy and energy conservation.

Mair said he would like to be remembered at GM for innovation in product and manufacturing.

"I'd like to be known," he said, "as having a part in improving the effectiveness of this company in its innovative elements that allow it to remain a world leader in its product and its manufacturing."

Sundance, Shadow small but upscale

Chrysler Corp.'s 1987 Plymouth Sundance and Dodge Shadow will go on sale Sept. 4 as entries in the "upscale subcompact" market.

Sundance and Shadow are five-passenger two-door and four-door hatchbacks. Chrysler said they offer a performance and option level not typical of subcompacts.

Four-door models are scheduled to go into production at Chrysler's Sterling Heights (Mich.) assembly plant in May. The two-door models follow in August. Public introduction is set for Sept. 4.

The standard powertrain is a 2.2-liter electronically fuel-injected 97-HP engine coupled to a dual-rail 5-speed manual transaxle. Also available are a 3-speed automatic transaxle and a 145-HP multi-point fuel-injected turbocharged engine.

Sundance and Shadow may be equipped with options not previously available on Chrysler-built subcompacts, including power door locks, power windows and power outside mirrors.

The subcompacts are 171.7 inches long, 67.3 inches wide and 52.7 inches high. They ride on a 97-inch wheelbase and weigh 2,500 pounds.

Expected EPA mileage for models equipped with the 2.2-liter EFI engine are 27 city, 43 highway and 32 combined, Chrysler said.

New on Sundance and Shadow are smaller "2E" single-lamp headlamps which Chrysler said provide the same lighting as larger single rectangular lamps. The lamps contribute to the low, aerodynamic front-end styling. In addition, because the lamps are plastic, they are less susceptible to stone damage and weigh less.

Sundance and Shadow are the first cars to be equipped with Chrysler's new seat-belt system. One of the features of the system is a new end-release buckle with a newly designed release button at the end of the front seat belts.

Plymouth Sundance has flush windows

Dodge Shadow makes debut Sept. 4

The turbo option includes a 125-MPH speedometer scale, vacuum boost gauge and message center.

The company said the cars are designed to straddle the subcompact and compact segments of the market and compete with Chevrolet Cavalier.

Dodge said Shadow's base models will be equipped with features not found on base models of domestic competitors including 14-inch wheels and tires, dual remote mirrors, halogen headlights, quick-ratio steering, tachometer, cloth seats, fold-down rear seats and counterbalanced hood.

The Shadow two-door and four-door will be available in high-line and ES versions.

Chrysler said the Sundance "enhances revitalization efforts for the Plymouth brand." It will be as a two-door or four-door hatchback.

Chrysler seeking new technology in $30-million project

DETROIT.—Directors of Chrysler Corp. have established a $30-million fund to pursue the exploration of emerging technology.

"Chrysler is searching the world for new technology to keep our competitive edge," said Gerald Greenwald, Chrysler Motors chairman, in announcing the Technology Access Fund (TAF).

Greenwald said it will provide opportunity for some joint ventures, expand on the existing engineering research grants with universities (the Chrysler Challenge Fund) and establish a coordinated program with leading European manufacturing research institutes.

The TAF has targeted 31 projects in these five key areas of technology: Advanced automotive systems, factory automation, advanced manufacturing processes, artificial intelligence and computer integration of the enterprise.

Stressing that the development of the emerging technology would supplement Chrysler's current research, Greenwald provided these highlights of areas of interest to the TAF:

Advanced Automotive Systems: Product features which keep current customers and win new customers.

Factory Automation: New approaches to robots and materials handling that create major improvements in quality and productivity.

Advanced Manufacturing Processes: New processes for machining, stamping, joining and assembly that improve quality and reduce costs and leadtime.

Artificial intelligence: A major emerging technology with a wide range of potential applications impacting all areas of the company. Expert systems and machine vision are the two segments of particular interest to Chrysler.

Computer Integration of the Enterprise: Networking of the entire enterprise using new software and hardware so that all work moves together in parallel or simultaneous processes. Potential benefits include greater productivity, reduced leadtime and improved quality by eliminating late changes.

Each project in the fund has a sponsoring Chrysler activity. One lead person—several, if the project involves more than one area—is responsible for developments and for putting the new technology to work.

The TAF projects range between $100,000 and $4.5 million and the entire fund is capped at $30 million.

The projects were reviewed with the Technology Advisory Council, formed last year to provide Chrysler with independent sources of technological advice and awareness.

Chrysler's Technology Advisory Council was established in March, 1985, as part of what the company termed its commitment to maintaining its leadership in high technology.

Lee A. Iacocca, Chrysler Corp. chairman, said, "This outstanding group of scientists and engineers has the expertise and perspective to provide Chrysler with independent sources of technological advice and awareness.

"The council will be a creative force in helping the company use new technology effectively. It should also challenge us to develop new ways of doing business in an effort to bring about technological breakthroughs."

Iacocca chairs the council. Jack D. Withrow, executive vice president of product development, is the corporation's liaison officer with the group.

Dr. Harry Cook, director of research and development, is council manager.

2-year X-car trial comes to end

Continued from Page 3

This is why the Justice Department is asking more than $4 million in civil penalties.

Lawrence Moloney, a Justice Department special attorney representing NHTSA, asked during the oral arguments last week: "What did they know and when did they know it?" This is especially ironic because those words made famous by Watergate were spoken in the same courtroom used for the Watergate trial.

Judge Jackson defended President Nixon's Committee to Reelect the President in a case brought by Common Cause.

Citing internal GM documents it subpenaed, the government contends GM knew as early as 1978 of braking problems and yet proceeded with production. In addition, NHTSA charges GM knew its two recalls were inadequate.

Moloney also attacked GM's reliance on engineering data instead of real drivers fishtailing across lanes. While X-car brakes were being changed via various recalls and fixes, GM never changed in its "stonewalling," he charged.

The government notes this alleged defect has been the subject of more consumer consumer complaints—3,563, along with 1,180 accidents and 323 injuries—than any other defect in history.

GM's chief defense lawyer—Thomas Gottschalk of Kirkland and Ellis—disagreed on all counts. The law's purpose is to reduce an "unreasonable risk of accidents," he said. Therefore, reliance on accident data—where X-cars shine—is an appropriate approach and one the government has often used in other defect cases, he said.

Gottschalk said brake systems are complex, needing maintenance and repair, and are subject to misuse and abuse by drivers, tire condition and road surfaces. GM maintains its many studies and the task force it established are evidence not of unresolved brake problems or GM's failure to "do its duty" but instead are evidence of its conscientiousness.

GM has consistently denied the existence of a defect and has argued that publicity generated by the Center for Auto Safety, various congressional hearings and NHTSA generated smoke where there was no fire.

Harry J. Pearce, formerly with a North Dakota firm but now with General Motors, rebutted testimony by consumers. He explained why it is difficult to remember details of steering and braking and what happened during unexpected yaw—a common condition.

Pearce testified he found many conflicts between consumer testimony and police reports and between NHTSA's reports of rear brake bias and GM's examination of the cars involved which revealed front-brake bias. Pearce also defended GM's choice of duoservo brakes and Bendix linings.

Pearce's "bottom line" was whether people are getting hurt. He said they are not.

Big Three offer new round of cut-rate loans

Continued from Page 2

B150, B250 and B350 vans plus B100, B150 and B250 wagons as well as D and W series 100, 150 and 250 pickups are all eligible for the $500 cash-back allowance. The B350 wagons plus D and W 350 model pickups are eligible for $1,000.

Ford, which has been running with generally tighter days-supply numbers, has expressed reluctance to join APR programs at every point, but jumped in after GM and Chrysler.

The Ford program offers 7.7 APR financing on Escort, Escort EXP and Lynx models on Ford Credit contacts of up to 36 months. The program began Feb. 27 and has no expiration date.

Ford also extended 9.9 APR financing for up to 42 months on Lincoln Town Car models.

A 9.9 APR program for up to 48 months applies to Mustang/Capri models with 2.3-liter L-4 engines; Tempo/Topaz; Thunderbird/Cougar models with 3.8-liter V-6 engines; Merkur; Crown Victoria/Grand Marquis; Bronco II; F-150 light trucks; Econoline E-150, and all Rangers except Ranger "S."

American Motors, which earlier extended its 7.5 APR/rebate program through March 9, is expected to announce a new program this week.

In addition, some of the importers, including Nissan and Isuzu, are using APR incentives.

Makers' net ranks 2nd-best as sales crack record

Continued from Page 3

1985, which cost about $150 million.

Profits were off 31 percent from 1984's record $2.38 billion, when the company paid taxes for only part of the year.

Sales were Chrysler's best ever at $21.26 billion, up 9 percent from 1984's $19.57 billion, the previous record.

Factory sales were 2,157,373 vehicles, up 6 percent from 1984.

American Motors lost $125 million in 1985. That compared with a $15 million profit in 1984.

Sales for the year were $4.0 billion, off 5 percent from 1984's $4.2 billion.

Worldwide factory sales were down 11 percent at 391,769.

For the fourth quarter, GM had net income of $1.3 billion, up 43 percent from the previous year's $877 million, when UAW members in Canada struck GM.

Sales were $24.6 billion, up 18 percent from $20.9 billion in 1984, making the 1985 period GM's best fourth quarter for sales.

Ford, during the fourth quarter, earned $720 million, off only slightly from 1984's $721 million.

Ford's sales set a fourth-quarter record of $14.1 billion, up 5 percent from 1984's $13.4 billion, the previous peak.

Chrysler's fourth quarter showed a profit of $215 million, down 65 percent from 1984's record $610 million. Still, the 1985 fourth quarter was Chrysler's second-best showing for the period.

Sales set a record for the quarter at $5.38 billion, up slightly from 1984's $5.34 billion, the previous record for the quarter.

AMC lost $6.7 million in the fourth quarter, compared with a $3.1-million profit in 1984. Sales were $1.13 billion, compared with 1984's $1.06 billion.

obituaries

Edward T. Breslin

LIVONIA, Mich.—Edward T. Breslin, 59, retired Chevrolet truck public relations manager, died Feb. 24 after a long illness. He was a reporter with the Detroit Times until it folded, joining General Motors in 1973. He worked in both the GM and Chevrolet public relations departments and was Chevrolet truck public relations manager for more than a decade, until taking disability leave in September, 1983.

John R. MacManus

DETROIT.—John R. MacManus, 83, a retired senior vice president of the MacManus, John & Adams, Inc., advertising agency, died Feb. 25. Mr. MacManus had retired in 1966 from the agency, now D'Arcy, Masius, Benton & Bowles. He had been in charge of the Champion Spark Plug account. He helped build the agency, which was founded by his father, Theodore MacManus.

Next rework: 1987 Daytona

CHICAGO.—Chrysler Corp. has plans for a major update of its Daytona in 1987, Gerald Greenwald, Chrysler Motors chairman, announced at a press conference during the Automotive Service Industry Assn. meeting here last week.

The company also plans to introduce a large front-wheel-drive luxury car (C-car) in mid-1987, he said.

Chrysler previously announced it would introduce nine new models between March, 1986, and May, 1987, including the Sundance/Shadow subcompacts, Dodge Dakota pickup,sporty-intermediate J-coupe and the Chrysler-Maserati Q-coupe.

Greenwald also said Chrysler has plans to update its minivan with 6-cylinder, luxury and stretch versions.

Greenwald also said that previous Chrysler predictions of 10.5 million U.S. car sales for 1986 may be "on the light side."

Auto makers try again for best week of '86

By Kathy Boyer
Detroit Reporter

Domestic auto makers last week scheduled their highest production of 1986.

The makers also targeted a yearly high the previous week, but they missed the mark.

Last week's projected output of 178,486 cars was the best of any week since the 182,811 completed the week ended Dec. 14.

Last week's goal was 1.38 percent more than the previous week's 176,065, but was down 1.92 percent from the year-ago week's 181,986.

So far this year, 1,456,032 cars have been assembled, 1.46 percent below the 1,477,653 completed last year at this point.

Companies shared last week's estimated output as follows: General Motors, 54.79 percent; Ford Motor Co., 20.82 percent; Chrysler Corp., 17.28 percent; Honda of America Mfg. Co., 2.10 percent; New United Motor Mfg., Inc., 1.66 percent; American Motors, 1.26 percent; Volkswagen of America, 1.12 percent, and Nissan Motor Mfg. Co., U.S.A., 0.97 percent.

Ford slated Saturday (March 1) overtime at its Atlanta plant.

Daily overtime is scheduled for all Ford plants this week (March 3) except Atlanta and Chicago.

Overtime is slated Saturday (March 8) at Ford's plants in Wayne, Mich.; Wixom, Mich.; Kansas City, and Chicago.

Saturday overtime was slated at Chrysler's Belvidere (Ill.) and Newark (Del.) plants.

The same plants along with St. Louis are scheduled for daily overtime this week.

Truck production passes 600,000

U.S. truck production passed 600,000 last week, reaching 601,-224.

The truck build so far this year is 5.63 percent more than the 569,-169 completed last year at this point.

Scheduled production of 72,560 trucks last week was down 1.08 percent from the previous week's 73,349—which was the highest build of any week this year.

Last week's output was 3.66 percent more than the year-ago week's 69,999.

Chrysler's Warren (Mich.) plant remains idle for model changeover. The plant is scheduled to resume production in mid-March.

General Motors scheduled Saturday (March 1) overtime at its Janesville (Wis.), St. Louis, Moraine (Ohio) and Baltimore plants.

Ford slated Saturday overtime at its St. Louis plant.

Canadian production highest of year

Canadian car and truck makers scheduled their highest production of the year last week.

They also extended their year-to-date lead over 1985.

Estimated output of 24,960 cars was the best since the 26,733 built during the week ended Dec. 14.

Last week's production was 9.38 percent more than the previous week's 22,819 and 20.42 percent more than the year-ago week's 20,-727.

So far this year, 176,272 cars have been built, 3.06 percent more than the 171,036 completed last year at this time.

Scheduled output of 19,212 trucks was the highest since the 19,256 assembled during the week ended Dec. 7.

Last week's build was 0.19 percent more than the previous week's 19,175 and 4.32 percent more than the year-ago week's 18,-417.

Year-to-date, 158,061 trucks have been assembled, 2.06 percent more than the 154,873 built last year at this point.

American Motors' Brampton (Ont.) plant resumed production today (March 3) after being idle since Jan. 24 to prepare for output of the Jeep Wrangler.

VW plant sale falls through

Volkswagen of America's proposed sale of its U.S. metal stamping plant to a Michigan-based firm fell apart last week, leaving the future of the facility and its 800 workers in doubt.

VWoA had been negotiating to sell the South Charleston (W.Va.) plant to C&F Stamping, Grand Rapids, Mich., but talks broke off when the two sides failed to reach agreement on financial terms, a VWoA spokesman said.

Meanwhile, VWoA said talks with Fuji Heavy Industries (Subaru) concerning a possible joint-venture project at VWoA's Westmoreland (Pa.) assembly plant also have been terminated. VWoA said it is not actively pursuing another partner for U.S. assembly.

VWoA previously had announced plans to phase out production of the metal stamping plant by mid-1987. In the future, the Westmoreland plant will be supplied with stampings from VWoA affiliates in Mexico and West Germany, with the first shipments coming this summer.

Unless a buyer can be found for the South Charleston facility, VWoA will slowly phase out the jobs of the 700 hourly and 100 salaried workers during the next 18 months.

VWoA will continue efforts to sell the plant, but has no "serious" offers at this time.

"Original plans were to have that plant (South Charleston) supplying stampings for two assembly plants here in the U.S.," the VWoA spokesman said. "But that never happened. We did everything we could to keep the plant open, but it was just more capacity than we needed."

—Dave Zoia

1,300 new cars at Ford facility caught in flood

Continued from Page 1

before the flooding became serious.

Benicia is a large port of entry for both rail and sea shipments of cars from the East and and the Far East. According to Eichen, only the Hadley facility was affected by the weather.

In the Napa Valley, Vintage Chevrolet-Toyota was one of the few stores able to open during the weekend of the flood, according to General Manager Don Wissner. Four to six feet of water inundated the dealership,and 183 cars were lost.

In addition to damaging the cars, the water wiped out his parts inventory, computers and phone system.

However, Wissner said operations resumed three days after the flood began. Sales were conducted out on the lot, and a temporary F&I operation was set up on the showroom floor. New shipments of cars and parts began to arrive the next day and the last of the damaged cars were removed.

Across the street at Lyon BMW-VW, operations were halted for more than a week.

In Marysville, which is farther north, McCullough Chrysler-Plymouth lost 20 cars at its satellite location in the Peachtree Mall. The shopping center was flooded when a levy broke in nearby Linda.

Geneva show: Time and place to weigh industry restructuring

By Richard Feast
European Editor

GENEVA.—Seekers of new auto industry products and truly fresh pointers to the vehicles of the future were disappointed by the offerings at the international exhibition here last week.

Those in search of an industry coming to grips with some substantial structural changes found Geneva a fascinating marketplace for gossip, innuendo, optimism, pessimism and some good, old-fashioned hokum.

Here was the the world's auto industry, meeting for the first time since last fall's shows in Frankfurt and Tokyo. The events since then indicate the extent of the restructuring.

In Europe alone, Volkswagen has committed itself to a takeover of Seat and General Motors is bidding for BL's Leyland Trucks and Land Rover. GM has already gobbled up Group Lotus and has taken its strategic decision-making out of Adam Opel in West Germany into a European coordination group in neutral Switzerland.

Ford and Fiat's Iveco are about to link truck-making operations. Ford has tried to buy BL's Austin Rover, but was put off by the backlash from Little Englanders. It could try again, at a more opportune moment.

In a few months, Japan's first European assembly plant will burst into action. The Nissan factory in Northeast England holds the prospect of turning into a 100,000-car-a-year manufacturing operation, with all that means in terms of exports and additions to the continent's over-capacity problems.

In Italy, Nissan's joint project with Alfa Romeo—to make the Arna sedan—was given the chop a few months ago. The car was a failure, but that does not mean the companies have fallen out. More developments are expected soon.

While Europe's prestige car makers continue to do very well, thank you, the volume makers report contrasting outlooks. On the one hand, there is the Volkswagen Group recruiting more labor and working 18 shifts a week in some factories to keep pace with demand. On the other, there is Renault still trying to cut costs by reducing employment—three years after the rest of the French industry and five years after the rest of Europe.

VW, Ford and Fiat are in the black. They have been joined at long last by the Peugeot group (PSA), though it continues to be held back by the results from the Citroen Division, whose best-selling products will be under stronger attack this year from new Renault vehicles.

Renault, itself, will continue in the red until the end of the decade. GM's Adam Opel is reducing 1984's record postwar loss, but will provide no indication of when it will return to financial health. Each company regards such a move as the No. 1 priority.

The three state-owned com-

Ford, IVECO near truck deal

By Andrew R. McGill
Editor of Automotive News

GENEVA.—Ford of Europe and Fiat's giant IVECO subsidiary are within weeks of completing a joint-venture to market and develop new trucks in Europe.

Reliable sources close to the talks said IVECO would manage the joint-venture, although IVECO and Ford would each hold 48 percent of the investment. The remaining 4 percent would belong to a merchant bank that would designate IVECO to operate on its behalf, sources said.

The negotiations have been going on for months and those close to the talks said only "minor details" are still to be worked out, such as the name of the joint-venture company. Those sources said the venture should be completed in four to six weeks.

Spokesmen for both companies would not comment on terms of the joint venture or on when—or if—it would be completed, saying only that talks were continuing.

But in an interview in Turin last week, IVECO Chairman Giorgio Garuzzo said,"If you would look at the market situation and the product lines, it is clear that there is a matching between our two companies."

As for the status of the talks, Garuzzo added, "When these kinds of discussions are under way, you know what the problems are but you don't know how long it will take to solve them."

But sources said the most complicated aspects of the joint venture have been completed.

They said the venture would allow Ford dealers in Great Britain, who now have only the Ford Cargo to sell, to also market IVECO's full line of trucks. IVECO dealers could also sell the Cargo. When a replacement for the Cargo is needed in four or five years, it would come from IVECO, a source said.

Observers said the 48-48-4 division of the trucking joint venture was a formula that came about after negotiations between Fiat and Ford failed in the car business four months ago because the two sides couldn't agree on which company would be in charge.

The formula allows both Fiat and IVECO to be equal partners in terms of ownership, but IVECO would control the venture with the endorsement of the bank holding the remaining 4 percent.

Top executives would not accept such an agreement for the car business—where Ford and Fiat each hold about equal shares—but it was acceptable for the trucking venture because IVECO's share of the total market (14 percent) is more than three times that of Ford (4 percent).

The venture would appear to help IVECO in Great Britain, where Ford has a potent dealer organization and 20 percent of the market in its class with the Cargo. Ford's British dealers would also sell the full line of IVECO trucks under the deal—giving the dealers products in the 6-11-ton classes—and IVECO would have a chance to sell more trucks in the hotly competitive European market.

Chrysler Laser to die; J-body LeBaron due

By Edward Lapham
Marketing Editor

For 1987, Chrysler Corp. will discontinue the G-body Chrysler Laser model and will introduce a Chrysler-nameplate-only LeBaron GTC J-body in coupe and convertible versions late in the model year.

Automotive News sources revealed that the changes are part of Chrysler's 1987 marketing strategy for further Dodge/Chrysler-Plymouth model delineation.

As previously reported (Automotive News, March 3), the Dodge Daytona, which will be the sole G-body, will receive a "major update" for 1987.

In calendar 1986, C-P dealers sold 50,957 Lasers. Dodge dealers sold 49,533 Daytonas.

Although there will be two J-body models, current marketing plans apparently do not include any Dodge J-cars.

Both marketing units are scheduled to get P-cars, Dodge Shadow and Plymouth Sundance, in two-door and four-door models, and stretched versions of the Voyager/Caravan.

Also, the company apparently confirmed to dealers that it intends to allow C-P dealers to keep the rear-wheel-drive M-body Chrysler Fifth Avenue for another year before it is replaced by the new C-body cars in the 1988 model year. The C-cars will be built at the Belvidere (Ill.) assembly plant.

Chrysler officials presented the 1987-model-year plans to dealers

Auto dealers getting serious about selling to women

By Kathleen Hamilton
Managing Editor

Only three flips of the calendar pages into 1986, and already it is clear that this is the year of selling cars to women.

The auto makers—import and domestic—and the advertising industry have grappled seriously with that major chunk of the market for several years, but this year is the first in which the marketing efforts have clearly filtered down to dealerships.

In New Orleans last month, the NADA seminars on the topic were SRO. Dealers time and again could be heard trading tips on how to find and keep capable women on their sales forces.

Two major studies for women's magazines and an independent white paper on women in dealerships have been released. Factories have issued training tapes. Fast-moving consultants have already begun training dealer personnel on how to capture the women's market.

It's no niche: Various estimates put it at anywhere from 35 percent to 59 percent of all new cars sold. When women's participation in family purchase decisions is included, studies indicate women play a major role in at least 80 percent of new-car purchases.

The market is especially ripe for picking because many dealerships are still mistreating women, so the women-friendly stores can easily develop reputations that will net them high profits, several experts agreed.

J.D. Power & Associates' 1984 study found 10 percent of women respondents saying they had received fair or poor treatment

Seminar on marketing to women packs the house

NEWSPAPER

Fleet-incentive bill stirs battle in Iowa

By John A. Russell
New York Staff Writer

Legislation which would effectively halt the practice of offering incentives to large fleets is drawing heavy fire in Iowa, and dealers are gearing for a battle against manufacturers in the state legislature.

After being passed twice by the State Senate (because of parliamentary maneuvers), the bill is now before the lower house, and intense lobbying is underway. As one legislator put it, "half a platoon" of lobbyists descended on his committee.

As part of the tactics, a public hearing is scheduled for this week with a vote due later in the month.

Gary Thomas, executive vice president of the Iowa Automobile Dealers Assn., said the association is "cautiously optimistic" about passage. He said IADA "overwhelmingly supports the bill."

But it will be a battle because the manufacturers have been pulling out all the stops.

In essence, Thomas said, the bill prohibits manufacturers from selling new cars to Iowa dealers at a price higher than the lowest selling price in any state, including Iowa.

The bill also prohibits a manufacturer, distributor, wholesaler or their agents from offering any type of incentive—including rebates, fleet incentives and interest assistance—that would make the price of a motor vehicle lower than the price at which a a dealer could obtain it in Iowa or any other state.

While 12 other states have such legislation on their books, a key feature of the Iowa bill is the enforcement section.

In Iowa's case, the attorney general would have enforcement responsibility. And if the attorney general detects violations, he can demand filings including all records in the case.

The other states require dealers to take the cases to court. Consequently, there have been no cases filed on fleet incentives, usually because of the cost.

The crux of the Iowa bill is the attorney general's involvement which effectively gives the state control.

The attorney general can act on a complaint, Thomas said.

As the lobbying effort intensifies, the situation is reminiscent of a similar battle early last year in Oklahoma. There, manufacturers, particularly General Motors, waged an allout effort including uniting with the UAW and other unions to defeat a similar bill.

In Iowa, Thomas said, the dealers are facing a similar front. The UAW and organized labor has been brought into the manufacturers' fold along with several citizens' groups.

Key arguments by those opposed to the bill are that the dealers are "running business out of Iowa" and that "Iowa will become an island state."

While agreeing that it is basically an anti-fleet bill, Charles Spilman, director of state relations for MVMA, said in a telephone interview with Automotive News that it could affect even interest incentives offered to the public through the finance arms of the auto companies. He did not elaborate on that assertion.

However, the thrust of the bill, he admitted, is that manufacturers cannot discriminate in Iowa. He added that the domestic manufacturers and members of MVMA are opposed to the bill.

He said all dealers have the option to participate in fleet business, and he asserted that this type of legislation is bad public policy because it interferes with fair competition by placing re-

Falling oil prices called boon to autos, economic growth

ANN ARBOR, Mich.—The reduction in crude oil prices should produce healthy economic growth in the next two years, and the auto industry will be a beneficiary, University of Michigan economists predicted in their latest forecast.

Auto sales will increase 700,000 this year and one million next yearif oil prices remain near present levels, as expected, they predicted.

Other benefits should include gains in real gross national product (GNP), employment, consumer prices and auto sales.

The forecast, by professor and economist Saul H. Hymans, with Michael R. Donihue and Janet C. Wolfe, shows the auto market remaining strong for the next two years. Car sales will be about 11.2 million units this year and 10.8 million in 1987.

If oil prices remain near the $16-per-barrel level, the economists said, the results will be:

1. Nearly one percent more real GNP in 1986 and nearly 2 percent more in 1987.
2. A lower rate of unemployment in 1986 and 1987.
3. A reduction of 2 percent in overall consumer prices in 1986 and a reduction of more than 3 percent in 1987.
4. A $12-billion reduction in the federal budget deficit for fiscal 1987—"which will make it that much easier to hit the Gramm-Rudman-Hollings deficit target next year."

The forecast increases the annual rate of real GNP to 4.2 percent in the current quarter, 6 percent in the second quarter and 4.6 percent in the third quarter.

The growth rate is expected to dip to about 2 percent in the fourth quarter, as the Gramm-Rudman-Hollings expenditure cuts of $31 billion "jolt" the economy. The growth rate is then expected to rebound to a range of 3.5 percent to 4.5 percent during 1987.

Joe Wilssens

Posted prices at Detroit filling station recall the good old days

The civilian unemployment rate should decline from its current 6.7 percent to 6.25 percent by the end of 1986, then fall below 6 percent in the second half of 1987, ending the year at 5.9 percent.

Inflation will be especially mild this year, with somewhat more inflation in 1987.

For 1986, the economists said, the decline in inflation will be the result of the sharp decline in oil prices working its way through the overall price structure.

Chrysler joins suit on CAFE cut

WASHINGTON.—Chrysler Corp. has joined the Center for Auto Safety and others in challenging NHTSA's rollback of the 1986 passenger-car CAFE from 27.5 MPG to 26 MPG.

The company, which has consistently plumped for a tax on gasoline and retaining 27.5 MPG for post-1985 models as part of a national energy policy, is expected to file a friend-of-the-court brief tomorrow (March 11) with the federal appellate court for the District of Columbia Circuit.

Last October, NHTSA, in a 100-page decision, explained why it had responded favorably to petitions from General Motors and Ford Motor Co. and a request from the Automobile Importers of America on behalf of its European members.

Essentially, NHTSA said that 26 MPG was the "maximum feasible level" for GM and Ford, which comprise 60 percent of the industry, and therefore was the same for the industry itself. The agency indicated that all—except perhaps Mercedes-Benz, Jaguar and Saab—should be able to meet 26 MPG.

At that time, Chrysler protested the rollback vehemently. The Center for Auto Safety went farther and said it would go to court.

When it did so in November, the center was joined by Ralph Nader's Public Citizen, the Environmental Policy Institute, and the Union of Concerned Citizens. Listed as intervenors were the people of California, the State of New York and the cities of Los Angeles, New York, Chicago and Boston. Since Chrysler is too late to be an intervenor, it will file a separate amicus brief.

The center has maintained that a change in the 27.5-MPG standard is not needed, but if it were, it should be changed to "maximum feasible" or what is achievable by petitioners. The center said that setting the standard below the "achievable" allows the companies to accumulate carryback credits to eliminate or modify civil penalties—a situation not intended by the law.

While Ford and GM insist they cannot legally pay their civil penalties, Chrysler says they can and should. Jaguar has paid more than $6 million for missing 1983 and 1984 CAFE levels.

Meanwhile, NHTSA is considering a proposed rollback in passenger-car CAFE standards for 1987 and 1988 models to some unspecified level between 26 MPG and 27.5 MPG. The safety agency is also considering setting CAFE levels for 1988 and 1989 trucks with GVW of 8,500 pounds or less with ranges for 2x2s and 4x4s or composite levels.

NHTSA's earlier decisions on light-truck CAFE and EPA's decision on an adjustment factor for CAFE levels because of other auto regulations as well as the timing of NHTSA's CAFE decisions have all been challenged in court by the Center for Auto Safety and other consumer groups.

If NHTSA follows the same reasoning it used on 1986 models in deciding passenger-car fuel economy for 1987 and 1988 models, the safety center is likely to be in court again—perhaps joined by Chrysler at the outset.

Imports in a price stampede

By John K. Teahen Jr.
Senior Editor

For those who like numbers, the imported-car business was a barrel of fun last week.

The numbers were big, but they didn't involve sales—although the imports are doing mighty well in that regard.

The numbers were price increases. Honda, Audi and BMW entered the game that also has included Mitsubishi, Volvo and Mercedes-Benz in recent weeks.

Still to be heard from at presstime were some of the biggest names in the import world. Toyota and Nissan—No. 1 and No. 2—had not acted. Neither had Mazda, Subaru, Saab, Chevrolet or Chrysler Corp. Chevy and Chrysler are big on the captive side.

For some, it's simply a case of when and how much they will raise prices. Others are on the fence, watching and waiting.

The culprit for all makes is the exchange rate. The dollar has weakened against other currencies, and that means price hikes on imported autos. Hardest hit has been the Japanese yen. The yen-dollar ratio has dropped 25 percent in recent months.

Last fall, the dollar was worth about 240 yen. It was just under 180 last Friday. In December, when the rate was bout 200 yen to the dollar, many of the Japanese imports went up about $400, which was about 4 percent.

Honda last week announced its third increase on 1986 models. It averaged $365 per car, or 3.59 percent. The hikes covered a wide range—from $49 on the base Civic three-door hatchback to $561 on the Prelude Si coupe with automatic transmission.

The high-line cars bore the brunt of the increase. It ranged from $49 to $251 on CRX and Civic models, but it was $319 to $561 on Accord and Prelude.

The Honda Accord now starts at $9,195. A year ago, it was $7,895. The base Civic, at $5,698, is up from $5,399 last March.

The boosts were larger for Audi and BMW since they are much more expensive automobiles. Audi went up 4.9 percent, following a minimal rise of less than one percent at the beginning of the model year. BMW's bump averaged 2.5 percent last week; it was 4.6 percent when the 1986 models were introduced.

Audi's increases ranged from $695 on the 4000-S four-door sedan to $1,430 on the 5000-CS Turbo Quattro four-door wagon. Prices now start at $14,-925 for the 4000-S sedan.

At BMW, the hikes started at $395 on the 325 two-door sedan, now $19,955. Biggest raise was $1,110 on the limited edition L-7 four-door sedan, which carries a sticker of $44,030.

U.S. makers seeking larger share in Japan

By Francis J. Gawronski
Tokyo Bureau Chief

TOKYO.—Importers of U.S. cars are intensifying their efforts to get a larger share of the Japanese market in 1986.

Signs that point to an improving import-car market here are an escalating sales trend on a year-to-year basis for 24 consecutive 24 months and a steady lowering of car prices because of the yen's appreciation against the U.S. dollar.

Teruo Ishii, an official of Yanase & Co., the largest automobile importer in Japan and the general agent for Cadillac, Buick, Pontiac and Chevrolet cars, said the company is planning to boost sales to 1,670 units, compared with 1,265 in 1985.

Chrysler Corp.'s distributor, Azabu Motors, which still has not appointed a dealer outside of Tokyo, intends to double sales to 100, while American Motors' new distributor, Kintetsu Shibaura Jidosha Seibi K.K., expects to treble sales of Jeeps to 140 units.

A spokesman for Ford Motor Co. (Japan), Ltd., which has 11 dealers with 20 outlets in Japan, is targeting 1986 sales at 900, double the amount sold last year.

The Ford spokesman said sales are expected to increase because of the introduction of Taurus and Sable in Japan. He said they bring to the Japanese market "a European-type car not offered by Japanese auto makers."

"Finally, we can offer an American car that is unique in this country as far as size and luxuries are concerned," he said.

Imported-car sales in Japan were the second highest in history last year at 50,172 units, an increase of 19.5 percent over the previous year, mainly because of the growing popularity of European-made vehicles.

However, only 1,816 U.S. vehicles were sold in Japan last year, a decline of 23.8 percent from the previous year. In market share, U.S.-made cars slipped from second place in 1984 to fifth last year, rdbeing passed by British, Italian and Swedish-built autos. Cars from West Germany were the top sellers.

Sales of imported cars in Japan in January increased 4.3 percent from the year-earlier total to 3,017 units, marking the 25th consecutive month that registrations showed a year-to-year gain.

According to the Japan Automobile Importers Assn., sales of cars with engine displacement of 2,000 cc or more rose 4.6 percent to 1,160 units, while those with a smaller engine displacement climbed 4.2 percent to 1,857 units.

GM backs vans for disabled

Continued from Page 12

mercial applications that the Astro has with Target's commercial lift because it has front-wheel drive.

"If you put a lot of weight in the rear of it, you tend to lift your drive wheels off the ground," King said. "The Astro is a kind of a blend of truck and downsized van. It gives you the capacities of a truck and the roominess and size of a truck, but the handling characteristics and economy of small van."

The Chrysler vehicles, King added, are basically used for a paraplegic who can transfer and who doesn't need to transport a lot of people with him. As a two-passenger vehicle in its converted form, it typically could handle a married couple, where one might be disabled.

Target does not have the ship-through system on Chrysler vehicles that is available through Crown on the GM units.

It has, however, substantially reduced transportation costs.

The company has set up regional shops. The vehicles are brought into Target with the standard freight charge and, with shops in the Northeast, Southeast and the West, it is able to keep freight costs low.

Target has capacity to produce about 35-40 conversions a month on its own. King said that if market demand grew much beyond that, "We would have to work with Crown on getting more production capacity."

With the Astro program, King added, the company did not want to splinter the manufacturing. It wanted to concentrate it right in Baltimore, where the vans are made, and use the ship-through agreement with Crown and GM being able to place the vehicle right in the dealer's showroom and on his lot.

Target is about six months away from getting into a similar program with Ford on Aerostar.

It wanted to get the Astro/Safari program going before it tackled the Ford model, King said, noting the high cost of research, development, design and execution of such a package.

One problem he sees in converting the Aerostar, which hasn't really been addressed yet, is the sharply raked windshield.

"It may cause a problem with the power seat," he said. "It may cause a problem driving from the wheelchair, having to place the driver too far back because of the extreme rake on the front end. That's a problem we've looked at but really haven't analyzed yet."

RV sales show 10 pct. decline for December

Continued from Page 12

The RVIA's Index of Consumer Sentiment rose 3.0 points to 93.9 in December. The index measures consumers' general outlook on economic prospects and has been a leading RV sales indicator for some time.

Meanwhile, 12-month 1985 shipments totaled 359,200, off from 398,200 in 1984.

Van conversion deliveries totaled 164,800, off 6.0 percent from 1984.

Motor home deliveries of 68,700 were off 16.2 percent from 1984.

Within the motor home segment, conventional Type A deliveries of 33,600 were off 20.2 percent; van camper deliveries of 6,700 were off 5.6 percent, and chopped-van deliveries of 28,400 were off 13.4 percent.

Towable RV deliveries of 125,700 were off 10.8 percent from 1984.

Within that segment, travel trailer deliveries of 82,900 were off 10.3 percent; folding camping trailer deliveries of 35,900 were off 12.2 percent, and truck camper deliveries of 6,900 were off 9.2 percent.

Chrysler Canada reports 51 pct. drop in earnings

Chrysler Canada, Ltd., reported that 1985 earnings were equivalent to $99.4 million (U.S.), a 51-percent drop from 1984's record $202 million (U.S.).

In Canadian currency, Chrysler's net earnings were $138.1 million in 1985.

Chrysler Canada President Maurice J. Closs blamed the earnings decline on a weaker Canadian dollar, the cost of incentive programs, increased compensation payments to workers and retirees and the impact of strikes late last year.

Pre-tax operating earnings were $159 million in 1985, down from $203 million.

Sales set a new record of $5 billion, compared with 1984's $4.5 billion.

Factory sales of cars and trucks in Canada increased 8.5 percent to 249,043 from 229,558 in 1984.

Zimmer loss for 1985 climbs to $5.7 million

BOCA RATON, Fla.—Zimmer Corp. reported a net loss of $5.7 million for 1985.

That compares with a loss of $577,000 in 1984. On a per-share basis, the loss was $1.22 in 1985 versus 12 cents in 1984.

Sales for 1985 were $145 million compared with $153 million in 1984.

The 1985 loss included a fourth-quarter tax provision of $2.4 million related to the disposal of Zimmer's Mobile Traveler motor home manufacturing subsidiary and two other plants.

"We have been unsuccessful in stopping the operating losses at this subsidiary," said President Paul H. Zimmer. "And while it is difficult to give up on a potentially promising business enterprise, the need to eliminate any further drain on future earnings is essential."

For the fourth quarter, Zimmer lost $3.9 million compared with $2.1 million in the same quarter of 1984. Sales were $31.2 million in the 1985 fourth quarter compared with $22.9 million in the 1984 period.

Zimmer produces manufactured housing at eight plants in seven states, automotive products, including the Zimmer Golden Spirit at three plants in Florida and Georgia and sportfishing boats in Florida.

No Mickey-Mouse prize

1986 Pontiac Firebirds are given away daily at Disneyland, Anaheim, Calif. Continuing through May, each day a Disneyland visitor will be selected at random to recieve a Firebird featuring the standard 2.8-liter multi-port fuel-injected engine and several options.

E&G.
Because you deserve a handsome profit.

Every business needs an edge to compete. E & G goes beyond giving dealers like you an edge. We give you the "Dealer's Advantage" with classic extras that your customers demand—extras that give you a handsome profit too! Thanks to E & G you can give your customers elegant features like classic grilles and deck straps, classic spares, simulated convertible tops, and much more. Your customers will appreciate the quality so much they'll come back to you again and again. That's the E & G "Dealer's Advantage" and it's yours for the asking. Call us today for profit's sake!

Import registrations set record

By Jenny L. King
Detroit Reporter

U.S. registrations of new imported cars in November were up 26.03 percent from the previous year, notching a new high for the month.

Imports' share of the total market exploded 8.44 percentage points, to 33.98 percent from 25.54 percent a year earlier.

November, 1985, new-car registration figures collected by R.L. Polk & Co. put the import total at 262,739 compared with 208,481 in November, 1984. The totals include Volkswagens, Hondas and Nissans assembled in the U.S.

At the end of 11 months, imports accounted for 27.00 percent of the U.S. market, up from 24.72 percent the preceding year. New import registrations of 2,696,070 were up 17.32 percent from 2,298,121.

Japan's share of the November import total was 73.32 percent in 1985 versus 73.44 percent in 1984. West German-built cars represented 11.81 percent, down slightly from 11.88 percent. U.S. "imports" increased to 8.61 percent from 7.75 percent. Totals from the nine countries of origin were:

	Nov. 1985	Nov. 1984
Japan	192,635	153,106
W. Germany	31,019	24,777
United States	22,614	16,166
Sweden	11,446	9,530
Great Britain	1,815	1,839
France	1,786	2,506
Italy	851	541
Yugoslavia	573	0
Ireland	0	16
TOTAL	262,739	208,481

Year-to-date import registrations were 71.09 percent Japanese-sourced, 13.88 percent came from West Germany and 8.47 percent were U.S.-built. A year earlier, Japan's share was 72.10 percent, 12.41 percent were West German and 8.07 percent were U.S.-assembled. Totals for all countries were as follows:

	11 Mos. 1985	11 Mos. 1984
Japan	1,916,701	1,656,992
W. Germany	369,130	285,234
United States	228,420	185,440
Sweden	133,119	118,669
Great Britain	18,191	16,212
France	22,420	28,765
Italy	6,765	6,473
Yugoslavia	1,324	0
Ireland	0	336
TOTAL	2,696,070	2,298,121

Imported-truck registrations totaled 69,191 in November, an increase of 16.65 percent from 59,315 a year earlier. The breakout from the major makers included:

	Nov. 1985	Nov. 1984
Toyota	26,749	22,705
Nissan	15,487	15,065
Mazda	9,562	9,212
Isuzu	5,939	—
Dodge Ram 50	—	5,026
Others	11,454	7,307
TOTAL	69,191	59,315

At the end of November imported truck registrations stood 29.11 percent taller than they had the preceding year. Adding to 870,560 compared with 674,296, individual totals follow:

	11 Mos. 1985	11 Mos. 1984
Toyota	333,415	261,781
Nissan	239,118	176,661
Mazda	104,133	105,970
Isuzu	68,647	—
Dodge Ram 50	—	45,346
Others	125,247	84,538
TOTAL	870,560	674,296

Chrysler trying to stop U.S. from buying air-bag Tempos

By Geoff Sundstrom
Washington Reporter

WASHINGTON.—Chrysler Corp. is trying to stop the Federal Government from buying 2,000 Ford Tempos equipped with driver-only air bags.

Chrysler attorneys filed a petition with the U.S. General Accounting Office to block the proposed purchase by the General Services Administration.

Chrysler has complained that GSA's solicitation, made last December, is "unduly restrictive" because it requires passive restraints in subcompacts and Ford is the only qualified auto maker.

Chrysler said such a sole-source contract is unlawful.

Chrysler further charged that GSA is seeking to buy the passive-restraint vehicles under a "tentative policy which will require that all vehicles purchased by the agency (beginning with 1987 models) be equipped with passive restraints." GSA could not be reached for comment.

Ford supplied the government with 5,000 air-bag-equipped Tempos in 1985 and is the only auto maker with a publicly stated interest in supplying the 1986 models.

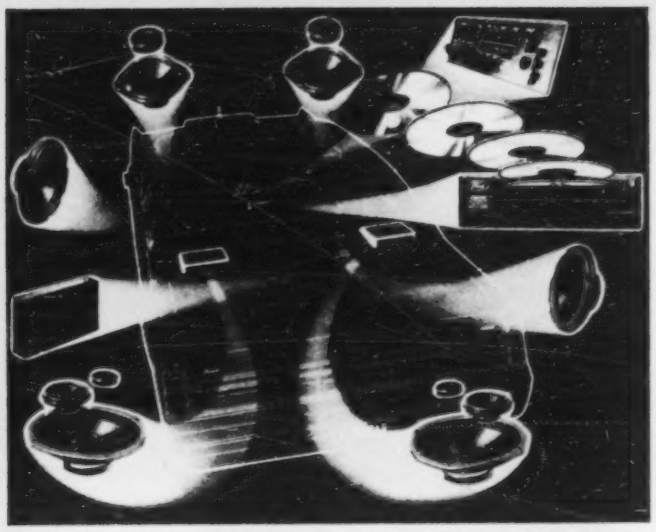
Although Chrysler's K-cars have been independently retrofitted with air bags by Romeo Koyjo, an Arizona firm supplying driver air bags for New York State's fleet, Chrysler apparently is not willing to use retrofitted air bags to become a bidder. The company has not yet announced plans to offer air bags as factory-installed optional equipment.

General Motors recently announced it would begin offering air bags on some 1988 models as a driver-side option.

GSA said it would respond to the Chrysler charges by March 17, and GAO said it will make a decision on the complaint later this spring.

Silverado set

NAPA, Calif.—The 20th annual Silverado Concours d'Elegance will be held June 1 at the Silverado Country Club here. All proceeds benefit the Children's Hospital in Oakland.



Ford is the first domestic auto maker to offer a compact disc player, as part of the Ford JBL Audio System on the 1986 Lincoln Town Car (above). Despite the increasing popularity of CDs, most American and foreign auto makers have refrained from offering them.

ICE heats up — for now

Although a strong U.S. economy and steady growth in Japan have kept the in-car entertainment (ICE) industry on an upward sales path since the start of the decade, the trend is about to reverse, according to a study by Euromonitor Publications Ltd.'s Market Direction Div.

Covering markets for ICE products in the U.S., U.K., Japan, France, Italy and West Germany, the London-based firm's report provides an international perspective to recent and future trends.

In those six countries, the ICE market was worth some $4.35 billion in 1984. Since 1980, unit sales expanded by about 5 million units to reach a 1984 level of 35.6 million.

International Markets for In-Car Entertainment

Country	Dollar Sales 1984	Unit Sales 1984	Estimated Unit Sales 1985

Source: Euromonitor, Market Direction

(Although these figures should be treated with caution because it's impossible to get precisely comparable statistics from different countries, data clearly show the market has undergone considerable growth.)

Two major factors account for the growth: (1) Consumers in most countries are coming to regard some kind of ICE as standard equipment for their cars; (2) Car makers faced with fierce competition and, in Europe especially, considerable production overcapacity, see original equipment ICE products as essential and profitable marketing tools.

Consequently, the ICE aftermarket has increasingly become one devoted to upgrading products. Euromonitor believes this will eventually result in present sales volumes being unsustainable since the market will no longer be supported by sales to owners of older cars — typically, 80 percent of new cars are equipped with some form of ICE equipment in the six countries studied.

However, there is considerable room for upgrading purchases. In recent years, car radios and tape players have declined in favor of the combination cassette/radio. The latter is expected to continue to show strong growth, with increasingly sophisticated products arriving as manufacturers offer additional features to tempt consumers.

Little exists, though, in the area of radically new technology to tempt mass consumers for whom graphic equalizers remain a mystery. While compact-disc car players have appeared in some countries, they have suffered from technical problems resulting from the hostile car environment, and there is not yet a large-enough home entertainment base to support significant ICE sales.

ICE sales are currently dominated by Japanese manufacturers, whose dollar sales in 1984 were over 25 percent higher than those of U.S. producers.

The Japanese dominate the export market even more, selling over $1 billion worth of ICE equipment overseas in 1984 compared to export sales of $139 million by their closest export rival, West Germany.

U.S. export sales, on a par with those of France ($60 million and $54 million, respectively), point up the weakness of the U.S. in consumer electronics export markets.

With product trends in the market firmly in place and recent sales growth expected to end, Euromonitor sees little reason to expect a significant change in performance by any of the world market's major producer nations. Volumes in 1988 are forecast to be 3 percent below 1984, though the drop will be eased somewhat by the emergence of more expensive products in the sales mix.

The French, Italian and Japanese markets are expected to show some growth — around 12 percent in France and Italy, and 9 percent in Japan. The sharpest decline will occur in the U.K., it is predicted, from 2.5 to 2.15 million units, or 14 percent. ■

HOW TO GET BIG MILEAGE OUT OF YOUR AUTOMOTIVE ADVERTISING.

5695000

Steer your advertising into the fast lane.

Business Week.

It drives home your message to nearly 5.7 million readers. (That's 2,548,000 more prospective buyers than Fortune; 2,586,000 more prospective buyers than Forbes.)†

And with an average household income of over $90,000 a year,* Business Week readers travel first class. They can afford to purr over Jaguars and Cougars.

Or make family pets out of Cobras and Sting Rays.

Most of them also own two or more cars.* So they'll stop for all automotive advertising. From big cars to little cars, domestics to imports.

So for a bigger audience that's big on cars, advertise in Business Week. It's geared for success.

For further information, contact: Terry Sweeney, Domestic Autos, (313) 352-9760 or Al Reed, Imported Autos, (212) 512-3763.

CABRIOLET—Convertible, $11,995. **Power disk brakes, radio** are standard. **Automatic transmission** is $435.

JETTA—2-door sedan (diesel), $7,950; 2-door sedan (gasoline), $8,150; 4-door sedan (diesel), $8,170; 4-door sedan (gasoline), $8,370; GL 4-door sedan (turbodiesel), $9,670; 4-door sedan (gasoline), $8,670; GLI 4-door sedan (gasoline), $10,190. **Power disk brakes** standard on all models. **Power steering** standard on GLI. **Automatic transmission** is $435 on gasoline-engine models.

SCIROCCO—Coupe, $9,980. **Power disk brakes** are standard. **Automatic transmission** is $435.

QUANTUM—GL 4-door sedan, $13,595. **Power steering, power disk brakes, radio** are standard. **Automatic transmission** is $450.

VANAGON—7-seater, $12,540; 9-seater, $12,590; GL 7-seater, $13,140; GL Syncro 7-seater (4-wheel-drive), $15,315; Camper $14,700; Camper Syncro (4WD), $16,875; GL Camper, $17,190; GL Camper Syncro (4WD), $19,335. **Power disk brakes** standard on all models. **Power steering** standard on GL and Syncro models. **Automatic transmission** is $450, not available on Syncro models.

Manual transmission is 4-speed on Vanagon models, 5-speed on all other models.

Prices do not include dealer prep fee of $35.

VOLVO

240 SERIES—DL 4-door sedan, $14,615; DL 5-door wagon, $15,105; GL 4-door sedan, $16,695; GL 5-door wagon, $17,280. **Power steering, power disk brakes, air conditioning** standard on all models. **Automatic transmission** is $455.

740 SERIES—GLE 4-door sedan, $18,525; GLE 4-door sedan (automatic), $18,980; GLE 5-door wagon, $19,750; GLE 5-door wagon (automatic), $20,205; GLE TD 4-door sedan (automatic), $20,095; GLE TD 5-door wagon (automatic), $21,320; Turbo 4-door sedan, $20,505; Turbo 4-door sedan (automatic), $20,960; Turbo 5-door wagon, $20,995; Turbo 5-door wagon (automatic), $21,450. **Power steering, power disk brakes, radio, air conditioning** standard on all models. GLE Turbodiesel sedan and wagon are not available in California.

760 SERIES—GLE 4-door sedan (automatic), $23,625; GLE Turbo 4-door sedan, $24,480; GLE Turbo 4-door sedan (automatic), $24,935; GLE Turbo 5-door wagon (automatic), $25,425. **Power steering, power disk brakes, radio, air conditioning** standard on all models.

Manual transmission models are 5-speed.

Prices include dealer prep fee.

YUGO

YUGO—3-door hatchback, $3,990. **Power disk brakes** are standard.

Price does not include dealer prep fee of $90. ■

Import total reaches 242 models

By John K. Teahen Jr.

Like prices and sales, the number of imported cars offered in the U.S. continues to rise.

The latest *Automotive News* tabulation shows that the leading imports have a total of 242 models in their lineups. That compares with 216 at this time a year ago.

The import count is still a long way from the domestic total of 320, but the foreign entries are gaining on the U.S.-built autos.

Combining import and domestic figures results in 562 selections for the new-car buyer to think about. Price mitigates that dilemma for the shopper; the Cadillac buyer isn't likely to spend much time in a Yugo showroom, and vice versa.

The number of import models has grown steadily in recent years. Here are the numbers since 1980:

March 1980	156
March 1981	181
March 1982	180
March 1983	188
March 1984	199
March 1985	216
March 1986	242

This year's 242 models are offered by 31 makes. New to the list are Yugo, Hyundai and Acura, the new Honda line that is not a part of the old Honda line. Two lines were dropped from the list of leading import makes for 1986: Bertone and Pininfarina.

The Japanese dominate the model count just as they dominate the import sales picture. Toyota is the leader with 28 models, followed by Subaru with 26 and Nissan with 24. Those three have one-third of the total number of import models.

It's the same story in country of origin. Japanese nameplates account for 142 of the 242 choices, followed by West Germany, 44; Sweden, 20; Italy, 14; France, 8; Great Britain, 8; South Korea, 5, and Yugoslavia, 1.

Although the numbers vary, there are similarities in the model mix for imported and domestic cars. It seems that the manufacturers on both sides of the ocean are reading the U.S. market the same way. Here are the numbers:

	Imports	Domestics
4-door models	98	119
2-door models	106	143
Convertibles	7	13
4-door wagons	31	45
TOTALS	242	320

Four-door sedans or hatchbacks make up 40 percent of the total for imports and 37 percent for domestics. Two-door models are the most popular for both — 44 percent for imports and 45 percent for domestics.

Convertibles account for 3 percent of the lineup for imports and 4 percent for domestics. There's also a one-point spread in station wagons — 13 percent for imports and 14 percent for domestics.

In both camps, hatchbacks are often called three- or five-door units, and wagons are referred to as five-door models. Only the side doors are counted in this tabulation. And sport models with removable hard tops are counted as coupes, not convertibles.

In counting import models, *Automotive News* uses the same criteria as in tabulating U.S. cars. A choice of transmissions (four-speed, five-speed or automatic) or a choice of engines (gasoline or diesel) does not necessarily constitute a separate model. And vans and sport/utility vehicles are excluded from the count for both imports and domestics.

Turbo units and four-wheel-drive cars are counted separately when they are priced that way. It is felt that they have enough differences in trim, equipment and mechanicals to merit the separate-model designation.

The U.S.-made models of Honda, Nissan, Renault and Volkswagen are not included in the import total. The VW Golf and GTI, the Renault Alliance and Encore, the Honda Accord and three Nissan Sentra two-doors are counted in the domestic total.

Another 13 import models are excluded from the count because of extremely low volume. They are Aston Martin, 4; Bentley, 3; Lamborghini, 2; TVR, 2; Lotus, 1, and Pininfarina, 1.

Passenger vans and sport/utility vehicles are not included in the car-model total. ■

#—Bertone and Pininfarina are not included among "leading import makes" for 1986.

*—U.S. built models of Honda, Renault and Volkswagen are omitted from the import model count; they are included in the U.S.-model tabulation. Those models are Honda Accord, three Nissan Sentra 2-doors, Renault Alliance and Encore and Volkswagen Golf and GTI.

The Truth about Youth

When it comes to selling small cars to people under 30, the domestics are on top

More than 100 domestic and imported car lines are sold in the U.S. And the car that attracts the youngest buyers is a domestic make. It's the Ford EXP with a median-buyer age of 24.8 years in the 1985 model year.

The accompanying table (*Median Buyer Age, 1985 Model Small Cars*) compares the median age of buyers of '85 models for the three largest domestic auto companies — General Motors, Ford Motor Co. and Chrysler Corp. — and the three leading importers — Toyota, Nissan and Honda — within four small-car segments (regular subcompact, sporty subcompact, regular compact, sporty compact). The data indicate that in these small-car markets, domestic and imported cars attract buyers of comparable age.

"Small and sporty lines with moderate prices attract young buyers," says Louis E. Lataif, vice president-sales operations, Ford North American Automotive Operations. "That's logical. Often single or newly married, pre-mortgage and pre-parenthood, these young buyers are more interested in style, image and price than in passenger capacity."

Young buyers are important buyers because their first cars often set a pattern of brand loyalty that lasts many years. "Manufacturers of almost every product seek the elusive youth market," says Lataif. "The rationale is to capture their loyalty early, then retain them as repeat buyers as they mature, marry, raise families and increase their incomes."

In the auto industry, young under-30 buyers are marginally the largest market, but they are constantly wooed by manufacturers for their current and, more importantly, their future purchases.

The under-30 market is a significant market, accounting for 25 percent of all cars bought in the U.S. (see accompanying chart, *1985 Model Year Car Purchases, Total Car Industry*). The under-30 group is slightly larger than any other age group, and it bought 2.8 million cars in the '85 model year. The second-largest buyer-age group is the 30-39 group with 2.5 million purchases.

The competition for these young buyers is intense in every industry, and perhaps even more intense in the auto industry. As the Europeans have, for all practical purposes, been shut out of the U.S. market for small sedans and entry-level sporty cars, the current competition is between the domestic and Japanese manufacturers.

Domestic makes, attracting the same age small-car buyers as imports do, attract more buyers through higher volumes. The two highest-volume import and domestic cars and their volumes of under-30 buyers are shown in an accompanying chart (*Highest Volume Cars, 1985 Model Year*).

In the small-sporty markets, domestic cars also have greater volumes and a higher share of under-30 buyers than imports do. (See accompanying chart *High-Volume Small-Sporty Cars.*)

Overall in the 1985 model year, of 2.8 million cars sold to under-30 buyers, domestics held 1.9 million and imports got 900,000.

If domestic makes are doing so well in the youth market, why is it generally believed that small imports attract the major share of younger buyers and domestic makes are being shut out of the entry-level market?

A Ford market analyst says it's because of the often-used by inadequate analysis that deals only with the median age of an automotive *corporation's* buyers. He says it is logical that GM and Ford, which sell hundreds of thousands of high-priced luxury cars, should have a higher corporate buyer-age than do Honda and Toyota, which do not sell those kinds of cars.

The Ford analyst says the correct measure of buyer age is among comparable car lines, not a comparison of corporation totals. As shown in the accompanying tables, similar domestic and import cars have buyers of the same age, yet domestics have higher volumes.

To accomplish their goal of selling to younger buyers, auto makers must first decide what younger buyers want — not just today, but three or four years from now, because that's how long it takes to get a car from the drawing board to the dealer showroom.

Naturally, not all young buyers are alike. But there are trends and generalities. Car size is important. Young buyers are most active in car-size segments ranging from the smallest subcompacts up through smaller mid-size lines, with considerable interest in sporty models.

This size limitation is reflected in the price paid for the car. Generally, larger cars are more expensive. Therefore, the younger buyer — mature in neither age nor income — is more active in the lower and mid-price ranges.

Sportiness is another factor. Small sporty cars attract even younger buyers than regular small cars. Many of these sporty models have a sporty image, but are not necessarily true sports cars.

High-content trim is another factor. The car may be small, but the paint stripes, wide tires and special wheels are often highly visible. And to some young buyers, money spent on a super stereo is more important than the convenience of an automatic transmission.

While young buyers want reliability, good road manners and good access to service in the cars they buy, the "personality" of the car is often important to them. Youth tends to be trendy within its own age group, but the age group as a whole wants to be different from older buyers.

Because the youth market is important, it is given special attention by auto makers. After all, many of today's young people will be buying cars for another 30 or 40 years. ■

Importers boost '85 TV ad spending

By Edward Lapham

The nation's vehicle importers supported their U.S. marketing efforts by boosting TV ad spending 28.6 percent in the top 75 markets during the first nine months of 1985, according to the Television Bureau of Advertising.

The largest shot came from spending for network commercials, which rocketed 49.4 percent to more than $141 million in the January-September period last year, compared with expenditures of $94.6 million in the same period of 1984.

The biggest year-to-year spending increase, as reported by TVB from Broadcast Advertisers Reports (BAR) data, was Porsche, which boosted its TV ad spending by a whopping 427 percent. The BAR data showed Jaguar with the next largest increase — 224 percent — and Honda with a 205-percent spending hike.

According to the data, Toyota surpassed Nissan as the import big spender in the first three quarters of the year, with total network and spot TV expenditures of $68.7 million.

Nissan's TV spending total, as monitored by BAR, dropped 7 percent during the January-September period to just a little more than $62 million.

Mazda, with total TV ad expenditures of $31.1 million ranking it fourth overall, spent the most on network buys, with a budget heavily weighted toward national campaigns and away from regional buys on spot TV.

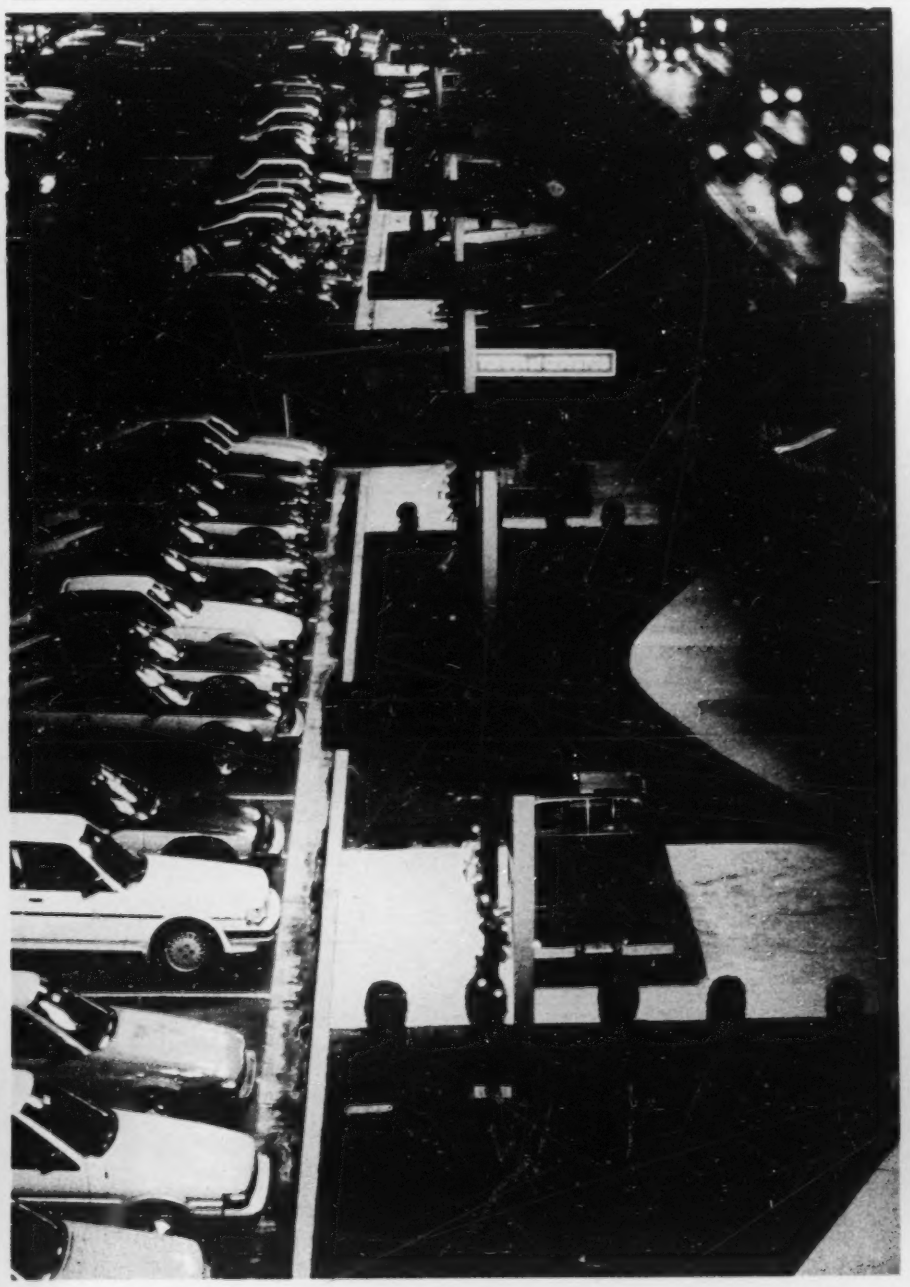
Toyota, which was outspent at the network level by both Mazda and Nissan, was far and away the biggest spot TV user, according to the BAR data.

In fact, Toyota was the only importer — except Isuzu, Jaguar and Saab which registered no network spending — to put more of its budget into regional spot TV buys.

According to the BAR data, Volvo's TV ad spending decreased 38 percent. However, sources at Volvo indicate its spending did not dip, as reported in the BAR data.

An industry source says a possible explanation for the discrepancy reported by Volvo and other importers is the random method of measurement used by BAR in most markets.

"The BARCUME monitors only three markets full-time — New York, Chicago and Los Angeles," the source says. "The other 73 are monitored one random week each month. That means some spot TV campaigns can be missed entirely." ■



IF YOU WANT TO LIGHT UP YOUR NEIGHBORS' LOTS, THAT'S FINE BY US. BUT YOU CAN'T DO IT WITH ELSCO LIGHTING

Elsco's Auto King VI lighting system is equipped with a uniquely designed projection optical system, and places light exactly where you need it. With its sharp cut-off luminaire and high-output 1000-watt, metal-halide lamp, light is concentrated in the desired areas, with a minimum of spill.

Auto King VI illuminates your display area from both perimeter and interior mounting locations. With a standard mounting height of 20 feet, the Auto King VI's sharp cut-off provides you with maximum lighting efficiency — with a considerable reduction in operating expense.

Leave your neighbors in the dark — call or write Elsco Lighting Products, Inc. and find out more about the innovative Auto King VI lighting system.

Big-Truck Showdown

With six more importers this year, and heavy overcapacity, U.S. big-truck manufacturers are on the defensive

By Joseph Bohn

Import competition in the U.S. isn't limited to cars and light trucks. Not by a long shot.

Last year alone, six more overseas manufacturers jumped into the U.S. big-truck market. Besides that, every U.S. truck maker has a deal going with an overseas source to sell imported units here.

These tumultuous actions, along with market deflation, are exerting extreme pressure on an already overcapacitized medium- and heavy-truck business in the U.S.

Class 8 truck manufacturing in the U.S. has production overcapacity of 50 percent, and some observers, including Peter E. Rupp, president and chief executive officer of Freightliner Corp., believe Class 8 will never again reach the approximately 140,000 units sold at retail in the U.S. last year.

Class 6 and 7, with about 145,000 retail deliveries last year, is also heavily overcapacitized.

As a result, manufacturers are scrambling to fill out product niches and improve their competitive position in order to weather the shakeout that inevitably will come.

PACCAR Inc., Bellevue, Wash., is the latest — and among the last — domestic companies to forge an overseas alliance. It signed a distribution agreement with Volkswagen do Brasil that will give it Class 6 and 7 trucks to sell for the first time, starting in November.

PACCAR initially will offer a 29,500-pound GVW Class 7 truck through Peterbilt and Kenworth dealerships this fall. A Class 6 truck will be offered one year later, and in the third phase a Class 7 tractor will be made available.

PACCAR's long-term goal is to capture 5 to 10 percent of the North American market. More Brazilian-built VW trucks will be added to its lineup in future years.

Hino Diesel Trucks sold about 1,000 units last year following its late spring introduction. Above is the medium-duty FE Series cabover.

OEM MARKET SHARES
U.S. CLASS 8 RETAIL SALES

	1981	1982	1983	1984	1985
Volvo White	4.9%	6.2%	6.6%	6.9%	8.8%
Ford	9.6%	12.5%	9.5%	9.0%	11.4%
Freightliner	9.7%	10.1%	13.4%	12.8%	13.5%
GM	13.2%	12.1%	9.8%	10.9%	8.7%

Kenworth	10.6%	9.6%	10.1%	9.8%	8.9%
Peterbilt	7.1%	7.8%	10.2%	10.0%	8.9%

VW do Brasil has been very successful in its home market, going from 2.8 percent penetration in 1979 to 22.7 percent of Classes 3, 6, 7 and the part of 8 in which it competes, according to Donald Dancey, executive vice president of VW do Brasil.

The company has been building 60 trucks a day — about 14,400 on an annual basis — and has the capacity, with proper investment, to get up to 130-140 daily production.

Navistar International and Nissan Diesel Motor Co. Ltd., Tokyo, have also signed an agreement for a new generation of Nissan-built cabover medium trucks to be sold by the U.S. firm. All of Navistar's 850 dealers in North America began marketing the new Class 6-7 models which recently went on sale.

Nissan plans eventually to export up to 3,000 units a year to Navistar, equal to about 15 percent of its entire output last year.

Neil A. Springer, president and chief operating officer of Navistar, says the new models will enable Navistar to maintain its full medium- and heavy-duty truck product line with competitive technology and low cost of ownership.

Nissan Diesel America Inc. entered the U.S. market in mid-1985 with a Class 7 cabover and an independent distribution system that now includes about 100 dealers.

Nissan Diesel's objective is to sell 4,000 to 5,000 trucks annually in the U.S. within five years. W.W. Hall, vice president and general manager, says the company wants to expand into lighter commercial vehicles, "Class 5 and perhaps as low as Class 3."

The company, Hall adds, might also explore the "baby Class 8" market, offering a tandem tractor with a downsized powertrain and GVW rating that can handle Class 8 requirements.

Nissan Diesel Motor Co., Japan, produces about 40,000 trucks a year from Class 3 to off-road units larger than Class 8. It exports worldwide.

Nissan will have to fight for a piece of the midrange action with such relative newcomers as Isuzu, Mitsubishi and various European makes, as well as Ford Motor Co. and General Motors.

Isuzu Truck of America Inc. is also using a dual distribution strategy. It has been setting up its own independent dealer network. Its Japanese parent company also sells similar midrange trucks through Chevrolet and GMC dealers. It is concentrating on specific classes like 3-5, but plans to expand into higher classes gradually.

Mitsubishi Fuso Trucks of America Inc. began selling Class 6 and 7 models early in 1986 in the Northeastern U.S., and is gradually expanding distribution nationally.

The company projects sales of more than 5,000 FK/FM medium-duty models and 5,000 FE light-duty models throughout the U.S. in the next several years.

The goal of Mitsubishi's Japanese parent company is to sell 7 percent of its production of commercial vehicles in the U.S. The

Isuzu to reorganize truck operations?

The Japanese aren't above improving their already efficient operations. Nor are they above using American companies to help them in those efforts.

Isuzu Motors Ltd., Japan, has begun combining its light- and heavy-truck operations into a single organization, according to industry sources. The effort is expected to take two to three years.

The company recalled Shinichi Yamayoshi, formerly president of Isuzu Truck of America Inc., to Japan and made him, in essence, assistant general manager of all truck sales and marketing activities in Japan, as part of a personnel shuffle concurrent with the reorganization.

Yamayoshi has been replaced at Isuzu Truck of America by S. Samomiya, formerly head of sales and marketing for North American operations within the Export Div. of Isuzu in Japan.

Yukio Itagaki continues as president of American Isuzu Motors Inc., parent organization of Isuzu's U.S. car and truck operations, and chairman of Isuzu Truck of America.

Yamayoshi's return to Japan came as a surprise to many Isuzu employes. Isuzu Truck of America has been extremely successful with its Class 3 products, some of which are also sold under different names by Chevrolet and GMC.

The Japanese parent firm reportedly enlisted the aid of New York-headquartered McKinsey & Co., management consultants, in its effort to streamline operations. McKinsey suggested a consolidation and streamlining of light- and heavy-truck sales and marketing operations.

McKinsey previously had helped General Motors streamline its sales and marketing functions.

How far Isuzu plans to carry its reorganization is not known, although the company has been a fast-tracker both in Japan and the U.S., where it sells compact pickups as part of its auto operations and, separately, one-ton vehicles like the NPR.

Isuzu Truck of America plans to expand gradually its U.S. vehicle offerings into the upper ranges of the medium-duty market over the next several years. ■

— J.B.

Isuzu's Class 3 trucks, like the NPR (above), have been very successful in the U.S.

Mitsubishi Fuso FK and FM Series medium-duty diesel trucks became available in Northeastern U.S. markets in January. Gradually, distribution will expand nationally.

BIG-TRUCK SHOWDOWN

Continued from page E42

parent firm builds about 125,000 commercial vehicles a year, of which almost 30,000 are FK and FM units.

Mitsubishi is also building a strong independent U.S. dealer network, and company officials are considering expanding the U.S. Mitsubishi commercial truck line into heavier vehicles.

Hino Diesel Trucks (U.S.A.), Orangeburg, N.Y., sold about 1,000 units last year, following its late-spring introduction. T.E. (Terry) Timms, sales operations manager, expects to increase that by 20 to 25 percent this year

Hino has a "horseshoe" distribution pattern of more than 70 dealers, and is working toward the Midwest, after covering the Southern, Eastern and Western markets.

Hino sells 25,500-, 30,000- and 32,900-pound GVW models, and a new 20,000-pound GVW model which went on sale in late January. It also sells an SG Class 7 tractor for a fifth wheel, rated at 55,000 pounds GVW.

Hino's goal is to sell 5,000 trucks a year in the U.S. by 1990. Next year the company plans a Class 8 vehicle, and it expects to enter Class 4 and 5 in the following two years.

Saab-Scania established a very limited dealer network to distribute its Scania heavy diesel tractors in the Northeastern U.S. in 1985. It plans to expand further South this year, according to Hans Doennig, manager of Scania Truck Division, U.S. arm of the Orange, Conn.-based company handling truck distribution.

Scania is a producer of heavy trucks, and officials have no intention of diversifying into lighter models. The company is expected to sell fewer than 200 big trucks this year, and is expanding slowly.

Ford began importing its medium-duty Cargo line from Brazil last fall, will gradually move the import into larger classes in the medium segment and eventually into the low end of the heavy segment. Its goal is to sell 80,000 Cargos yearly by 1988-'89.

Sooner or later, something — or someone — will have to give. But no one's taking bets yet on who the survivors of all this competition will be.

Profitability and survival are everyone's key goals. U.S.-based manufacturers will clearly feel the heat more than foreign competitors for whom the U.S. is just one more export market.

However, the growth of foreign trucks and foreign distribution in the U.S. is assured. ■

Volvo chalks up 42,000 Class 8 sales worldwide

The world market for heavy-duty Class 8 trucks rose about 3 percent in 1985 to a total of more than 400,000, according to Thage Berggren, president and chief executive officer of Volvo White Truck Corp., based in Greensboro, N.C.

Swedish-based AB Volvo itself had worldwide sales of 42,000 Class 8 vehicles, down slightly from 42,200 in 1984. Its world market share is just over 9 percent.

Volvo ranks third in the Class 8 market behind the West German-based Daimler group, which includes Mercedes-Benz and Freightliner, and second-place Renault group, which includes Renault and Mack.

In Western Europe, Class 8 sales increased by 2 percent in 1985, and Volvo increased its market share to about 14.5 percent, according to Berggren. The company picked up market share in France, Belgium, Italy and West Germany, but slipped in Great Britain and Sweden.

Brazil's economic recovery resulted in an increase of about 30 percent in heavy-duty truck sales last year. Deliveries from Volvo do Brazil's plant in Curitiba increased by 77 percent, and Volvo's share of Brazil's Class 8 market reached 27 percent.

During 1985 the company increased its ownership of Volvo do Brazil, and the firm is now a subsidiary of AB Volvo.

Heavy-truck sales in Australia climbed 40 percent last year. Volvo, with 13 percent of the market, is the second-best selling nameplate in Class 8.

The Middle East, Berggren says, "has proven to be a nightmare for many truck manufacturers." Total market demand there is down 40 percent since the early 1980s. Volvo delivered 3,000 Class 8 vehicles to the region last year.

Volvo's common denominator in all these markets, Berggren says, is production. The company believes a manufacturing presence is required in order to be truly successful in major markets.

AB Volvo's sales in 1985 totaled $11 billion including cars, trucks, oil and food products. Food and industrial product sales increased 11 percent, while energy sales were off because of a general decline in that market. ■

— J.B.

According to Thage Berggren, Volvo White president, a manufacturing presence is essential to be successful in major markets.

Toyota forms U.S. unit to sell industrial engines

TORRANCE, Calif.—Toyota Motor Sales, U.S.A., has formed Toyota Industrial Engine Operations to direct the sale of Toyota engines in the U.S. industrial market.

The new group will market Toyota gasoline and diesel engines to manufacturers of marine, agricultural, construction, turf-care, refrigeration and other industrial equipment. Initially, the engines will range from 30 HP to 200 HP.

GE Credit adds auto auctions in Colorado, Virginia

BARRINGTON, Ill.—General Electric Credit Corp. (GECC), through its Auto Financial Services Operation, has acquired the Denver Auto Auction, Englewood, Colo., and the Harrisonburg Auto Auction, Harrisonburg, Va.

The Auto Financial Services Operation auctions will be known as General Electric Credit Auto Auctions. Denver and Harrisonburg are the second and third in a planned series of auction purchases by GECAA.

GECAA purchased the South Seattle Auto Auction, Kent, Wash., in 1985.

GECAA plans to buy a 60-acre site in the Denver area and develop it into a full-service auction facility.

In the interim, the auction will continue to operate from the Englewood site, according to Fredrick W. McConkey, GECAA senior vice president of operations and marketing. Gary Smith serves as vice president and general manager at Denver.

The Harrisonburg Auto Auction, with Jim Wheatley as vice president and general manager, operates on a 60-acre site and is currently completing a major expansion.

Auto sales

Domestic sales weak; imports up for Feb.

By Jenny L. King
Detroit Reporter

Dragged down by a 25.56-percent sales drop the final period of the month, February domestic new-car sales missed the year-ago mark by almost 32,000 units and kept the year-to-date total 1.87 percent short of 1985's two-month figure.

Imported-car sales, up 25 percent February to Feb y, captured 26.37 percent o. the market, up from 24.90 percent in 1985 but off from 27.18 percent in January.

Industrywide sales numbered 832,993 for the month, down 7.33 percent from 839,148 last year.

Domestic deliveries totaled 613,371, down from 645,317 last year. The import count was 219,622, up from 193,831.

At the end of two months the grand total was up 1.91 percent, to 1,706,178 from 1,674,158. Domestics, at 1,249,275 were down 1.87 percent from 1,273,092, and imports, at 456,903 were up 13.92 percent from 401,066.

Domestic sales apparently were hurt by the changeover from the late-1985 incentive plans to the most recent round of low interest rates and rebates put in place during the final 10-day period.

Honda and General Motors were the only domestic makers to post sales gains in February. Honda sales were up 9.71 percent, to 14.637 from 13,342. GM surpassed its year-ago total by a narrow margin: Sales were up 1.43 percent to 351,587 from 346,616.

Ford Motor Co. reported sales of 146,898 domestic cars, down 11.96 percent from 166,862. Chrysler Motors was down 21.38 percent, to 80,322 from 102,162.

Volkswagen sales dropped 5.82 percent for the month, to 5,873 from 6,236 last year. American Motors was off 28.60 percent, to 7,211 from 10,099. Nissan sales numbered 6,843 in February.

GM's share of the domestic market catapulted to 57.32 percent from 53.71 percent. Ford earned 23.95 percent, down from 25.86 percent. Chrysler had 13.10 percent, down from 15.83 percent.

AMC dropped to 1.17 percent from 1.56 percent. VW had 0.96 percent, down from 0.97 percent. Honda climbed to 2.39 percent from 2.07 percent, and Nissan had 1.11 percent of the recent February market.

Sales increases among the domestic makes were few and far between. Cadillac was up 11.94 percent, Oldsmobile was up 8.62 percent, Chevrolet was up 2.62 percent and Pontiac was up 7.76 percent. Honda was the only non-GM make with a plus sign, its sales up 9.71 percent in February.

Plymouth was down 25.57 percent; Chrysler was down 6.99 percent; Dodge was down 27.12 percent; Ford was down 8.99 percent; Mercury was down 15.16 percent, and Lincoln was down 24.48 percent.

Buick sales were off 16.32 percent; AMC was down 40.73 percent; Renault was down 27.00 percent, and VW was down 5.82 percent.

There were 24 selling days in the month this year and last. The daily selling rate this February was 25,557, down 4.95 percent from 26,888.

Import sales in February, up to 219,622 from 193,831, included records for BMW, Isuzu, Jaguar, Mazda, Mercedes-Benz, Mitsubishi, Saab, Subaru and Volvo.

BMW sales were up 5.93 percent; Honda imports were up 14.17 percent; Isuzu sales more than doubled; Mazda was up 37.32 percent; Mercedes was up 19.80 percent; Mitsubishi was up 92.94 percent; Porsche was up 25.38 percent; Saab was up 23.69 percent; Subaru was up 18.96 percent; VW was up 25.10 percent, and Volvo was up 4.42 percent.

Toyota sales dropped 7.33 percent, and Nissan was down 15.84 percent. Audi was down 1.08 percent, Peugeot was down 4.69 percent and Renault was down 54.52 percent.

The market class breakout showed intermediates, at 27.85 percent, the largest single market segment in February. Imports were second with 26.37 percent of the total, followed by compacts at 16.50 percent, subcompacts at 14.01 percent, luxuries at 8.13 percent and standards at 7.14 percent.

Excluding imports the market was divided in this manner—Intermediates at 37.82 percent, compacts at 22.42 percent, subcompacts at 19.03 percent, luxuries at 11.04 percent and standards at 9.69 percent.

Third-period domestic sales plunged 25.56 percent, to 187,092 from 251,335. It was the lowest for the period since 1983 when Feb. 21-28 sales numbered 173,757. With seven selling days both years, the daily average was off 25.56 percent to 26,727 from 35,905.

GM's third-period sales dropped 19.22 percent. Ford sales plunged 39.43 percent. Chrysler was off 35.33 percent. AMC slipped 28.63 percent. VW was down 14.88 percent and Honda was up 10.12 percent.

GM's share of the last-period market was 55.53 percent. Ford had 21.25 percent. Chrysler earned 14.71 percent. AMC cornered 1.82 percent. VW had 1.46 percent, Honda had 3.85 percent and Nissan had 1.38 percent.

Where auto market was, February, 1986

	Total Sales	Pct. of Total

Strike vote OK'd at GM Orion plant

UAW workers at General Motors' assembly plant in Orion Township, Mich., have voted to seek strike authorization from the international UAW due to work-speed increases and safety hazards, according to the local union.

About 90 percent of the 3,402 members of UAW Local 5960 voting March 5 approved the strike vote, according to President Bill Spencer. Half of the union's membership of approximately 6,800 voted.

Spencer said meetings with plant management are expected to be held this week to discuss the strike vote issues. A decision to ask the international UAW to authorize a strike will depend on the outcome of those meetings, Spencer said.

Spencer said 125 of the 520 grievances pending at the plant were related to work-speed increases.

Spencer charged that the strike vote issues were the "tip of the iceberg." He claimed that "deep-running problems" exist at the plant and that management and the union have been unable to implement joint job-related programs.

"We still have not implemented quality-of-work-life programs at Orion," Spencer claimed.

GM declined comment on the strike vote, terming it an internal union matter.

A spokesman for the Buick-Oldsmobile-Cadillac Group said, "All of our installations in BOC are following a philosophy of participatory management."

The plant assembles Cadillac DeVille and Fleetwood and Oldsmobile Ninety-Eight Regency models.

VWoA and UAW move forward on new pact

Negotiators for Volkswagen of America and an estimated 3,200 UAW workers at VW plants in Pennsylvania and West Virginia appeared to be reaching a tentative contract settlement at press-time.

Contracts covering workers at those plants expired at 12:01 a.m. today (March 10).

Negotiations aimed at reaching an agreement to cover workers at those plants and an additional VW plant in Texas were held in Detroit last week. A contract covering 350 UAW workers at VW's air conditioning plant in Fort Worth expires March 31.

There are 2,500 UAW workers at VW's assembly plant in Westmoreland County, Pa. Approximately 1,680 others are laid off. There are 730 active employes at VW's metal stamping plant in South Charleston, W.Va.

VW in September, 1985 announced it would phase out the West Virginia stamping plant within two years. It is trying to sell the plant.

Day named chairman of Britain's BL

LONDON.—Britain's BL has appointed a new, full-time chairman—Graham Day, chairman of British Shipbuilders.

Day, a Canadian, replaces a part-time BL chairman, Sir Austin Bide, who is retiring.

Production

February auto production is 702,698, best since '79

By Kathy Boyer
Detroit Reporter

U.S. auto production of 702,698 units in February was the highest for that month since 1979, when 738,808 cars were assembled.

Last month's total was 4.31 percent more than the year-ago month's 673,636 but 7.31 percent below January's 758,107.

Last week's scheduled production was the highest of any week this year.

The total of 182,056 units was 3.53 percent more than the previous week's 175,844—which fell some 2,600 cars short of target—and 5.29 percent more than the year-ago week's 172,911.

According to unadjusted figures, 1,635,446 cars have been assembled so far this year, 1.31 percent fewer than the 1,657,119 completed last year at this point.

Companies shared last week's estimated production as follows: General Motors, 54.48 percent; Ford Motor Co., 22.36 percent; Chrysler Corp., 16.15 percent; Honda of America Mfg. Co., 1.92 percent; New United Motor Mfg., Inc., 1.79 percent; American Motors, 1.24 percent; Volkswagen of America, 1.10 percent, and Nissan Motor Mfg. Co. 0.96 percent.

GM's Fiero plant in Pontiac will be down this week (March 10) for what a spokeswoman called a scheduled adjustment.

Chrysler's Sterling Heights (Mich.) plant is down this week for facility changes in preparation for the new Plymouth Sundance and Dodge Shadow.

Nissan will shut its auto assembly line in Smyrna, Tenn., on April 1 for about four months.

The production halt will allow retooling in preparation for a new model, the four-door Sentra.

Truck production at the Smyrna plant will not be affected.

Chrysler plants in Belvidere, Ill.; Newark, Del., and St. Louis are scheduled for daily overtime this week (March 10).

Chrysler's St. Louis (No. 2) and Jefferson Avenue (Detroit) plants were scheduled to operate last Saturday (March 8).

Ford slated Saturday (March 8) overtime at its plants in Wixom and Wayne, Mich.

Feb. truck output highest in 7 years

U.S. truck production for February reached 295,452 units—the highest total for that month since 1979 when 308,358 trucks were completed.

Last month's output was 5.40 percent more than the year-ago month's 280,318 but was down 5.41 percent from January's 312,358.

Last week's scheduled build of 76,809 trucks was the highest of any week this year.

The estimated production was 8.87 percent more than the previous week's 70,552 and 10.28 percent more than the year-ago week's 69,650.

Canadian truck output sets record

Canadian truck makers reported their best February production ever.

The month's build of 76,081 units was 6.90 percent better than the previous February record of 71,170 units set last year.

But the month's total was 5.22 percent below January's 80,269.

Last week's estimated production of 19,207 trucks was down 1.94 percent from 19,586 the previous week, which was the best week this year. It was 12.82 percent more than the year-ago week's 17,025.

Canadian car production for February—88,772 units—was 11.91 percent more than the year-ago month's 79,326 and 1.80 percent above January's 87,204.

The car makers' year-to-date total of 201,618 is 5.08 percent more than the 191,876 assembled last year at this time.

Last week's scheduled production of 25,642 cars was the highest of any week so far this year.

The targeted build was 3.97 percent more than the previous week's 24,664 and 43.00 percent more than the year-ago week's 17,932.

Brazil suffers a hangover on ethanol

Costs zoom, spin complex problem

Copyright, 1986, Automotive News

SAO PAULO.—The runaway costs of Brazil's answer to the energy crisis mean the country's four auto makers could soon be asked to reduce their production of ethanol-fueled cars.

That could mean costly retooling for the four multinational producers operating in the protected market—Volkswagen, General Motors, Ford and Fiat—just after they had been publicly congratulating themselves on gearing up to meet the production targets of the alcohol program.

With the ethanol program forecast to lose a massive $2 billion this year after a $650-million deficit in 1985, plus an estimated 30-percent production surplus, the whole plan is coming under urgent scrutiny.

The thinking behind the 10-year-old alcohol scheme was to reduce Brazil's dependence on imported oil. Centered on Brazil's motor industry, it has been widely hailed. Today, more than 90 percent of the cars manufactured in Brazil are made to run on ethanol.

As a result, some 2.4 million of the 12 million cars on the road are fueled with ethanol. The rest, apart from one million diesels, use gasohol a four-to-one mix of gasoline to alcohol.

The car makers, fully committed to the rapid switch over to ethanol, may now find themselves frustrated by the escalating cost of the ethanol at the time of a sharp drop in the price of oil. And even when oil prices were at their peak, ethanol was barely competitive. Today, the cost of producing a barrel of hydrous ethanol—the kind put in cars—is estimated at around $37, almost three times the price of gasoline.

Petrobras, Brazil's state-owned oil company, which is responsible for the ethanol program, is taking the mounting loss between the high cost of subsized ethanol pro-

Sharing the profits

About 164,000 Ford Motor Co. employes received an average profit sharing payout of $1,200 last week. Ford marked the occasion by organizing a Profit Sharing Day at its Dearborn engine plant. Peter J. Pestillo, left, Ford vice president-employe and external affairs, passes a check to Ben Love, UAW Local 600 Dearborn engine plant building chairman. Story on Page 4.

U.S. Ford to export engines

By Mary Connelly
Detroit Reporter

Ford Motor Co.'s Dearborn engine plant has launched an aggressive campaign to garner worldwide business and will begin supplying 100,000 engines to Ford of Europe's German and English operations this fall.

Engine plant officials are also negotiating to supply engines to Mazda Motor Corp., a Taiwanese company and a Greek company, according to George Pfeil, manager of the Dearborn engine plant.

Pfeil also said the plant anticipates supplying Ford with engines for the Escort/Lynx replacement due in 1990.

In addition, the Dearborn engine plant will supply all the fuel tanks used by Mazda at its Flat Rock (Mich.) plant now under construction, and officials have had preliminary discussions with Nissan Motor Mfg. Corp., U.S.A., to supply fuel tanks for the Japanese maker's assembly operation in Smyrna, Tenn., according to Pfeil.

Ford is spending $3 million to boost engine production from the current annual capacity of 550,000 units to 612,000 units by year-end to meet European demands, Pfeil said. Ford will also spend $80 million to convert the plant to dual production of 1.8-liter and 1.9-liter engines for the North American and European markets, Pfeil said.

The plant currently produces 1.9-liter, 4-cylinder engines for the Escort/Lynx and an electronic fuel injection version of the 1.9-liter engine. In addition, the plant supplies 96 percent of the fuel tanks for Ford's automotive operations.

Pfeil said Ford foresees no need for additional "brick and mortar" at the plant. However, employment is expected to increase in the 1990s if the plant is successful in gaining additional business. There are currently 1,300 hourly and 325 salaried employes at the plant.

"We are competing worldwide for 4-cylinder engine business," Pfeil said.

Production increases beyond the projected 612,000 units annually are possible if demand

Chrysler's minivan seen as world car

By Mary Connelly
Detroit Reporter

Discussions are under way in China, Europe and unspecified Communist-bloc countries as Chrysler Corp. seeks to make its minivan a "world car."

"We think the front-wheel-drive van wagon is a world car. We think it very easily could catch on in different continents, Europe, Asia and other world markets," Richard E. Dauch, Chrysler executive vice-president of manufacturing, said in an interview with Automotive News. "There are a lot of business discussions going on, but we have nothing to announce."

Chrysler is currently discussing a possible venture with European-based companies and Communist-bloc countries, Dauch said.

He did not specify which countries. However, several Chrysler executives traveled to Romania earlier this year for exploratory sessions on possible ventures in that country.

In December, Chrysler confirmed that officials planned to visit the country to discuss possible minivan production in Romania. The talks, described as "very preliminary," were expected to focus on a joint venture or licensing arrangement in which Chrysler would share its technology and product but would not own or run the overseas operation.

Discussions in China center on several products in addition to the minivan, Dauch said.

"We have also discussed with China the potentialities of our world-class 2.2-liter engine and the derived engine families as well as our world-class fwd van wagons, our very durable pickup trucks and our rear-wheel-drive van wagons," Dauch said.

The minivan is assembled at Chrysler's Windsor (Ont.) plant.

In January, Chrysler Motors

New-car stock near 2 million

By Kathy Boyer
Detroit Reporter

Inventories of unsold new domestic cars pushed nearer the two-million mark as the month opened.

Standing at a 6½-year high, the total on March 1 was 1,867,265, the highest since Aug. 1, 1979, when 2,026,294 were counted. A month earlier, the total was 1,767,086, and a year earlier, it was 1,603,527.

However, in terms of days' supply, the inventory was virtually unchanged. The March 1 total of 73 days compared with 72 a month earlier and 59½ a year earlier.

The ideal days' supply figure is generally considered to be about 60, thus a heavy days' supply figure could lead to production cutbacks beyond those recently announced.

A step toward easing the inventory burden was taken by General Motors when it announced recently that it will cut back production at four of its assembly plants. Volkswagen also cut pro-

Dealer-limit law linked to prices

By Helen Kahn
Washington Bureau Chief

WASHINGTON.—A study by the FTC Bureau of Economics found that new-car prices are 6.14 percent higher in states that have laws which limit the establishment of new dealerships.

The study was based on 13 states. Extrapolating the results to the 36 states with such laws, the restrictions cost consumers $3.2 billion last year, the FTC study said.

Donald Scheffman, bureau director, said: "This study shows that these laws benefit auto dealers at the expense of consumers, who pay higher prices for new automobiles."

Although the study does not necessarily represent the commission's views, it did receive the personal endorsement of Acting Chairman Terry Calvani, an antitrust specialist.

At a breakfast meeting with reporters, Calvani stressed the need to alert consumers, regulators and state officials. He added that if states desired to reexamine their laws, FTC staff could offer expertise, testimony and even personal appearances.

In reexamining state laws, he added, those who seek such laws should be called upon to justify them, especially in light of their cost impact on consumers.

Frank McCarthy, NADA executive vice president, termed the FTC study "incredibly irresponsible." He said, "I don't understand how they can put out something that uses 1978 data, oddball hypotheses and models with no basis in reality to come up with a number they call accurate."

In 1983, 36 states had Relevant Market Area (RMA) laws—laws that restrict establishing new-car dealerships near present dealerships selling the same make of car. Under those laws, existing dealers can protest to the state if an auto maker plans a new point. The burden is then on the franchisor to justify his need. Many times, according to the study, new dealerships are not established.

A major finding of the study—"The Effect of State Entry Regulation on Retail Automobile Mar-

The Miami Vice feeling, on a budget

California Custom Coach, Pasadena, offers the 1986 Daytona America, a replica of the Ferrari Daytona Spyder, the same look-alike that turns heads on Miami Vice. Such replicas are built from 1978-80 Corvettes, customized with fiberglass body panels, reproductions of Ferrari seats and dashboard and a dual headlight mechanism similar to the original. The price is $39,500, vs. about $150,000 for the Spyder, which was dropped in 1974.

Yugo is rated below average in head-injury protection

By Helen Kahn
Washington Bureau Chief

WASHINGTON.—The Yugo GV two-door hatchback—one of the first four 1986 models crashed by NHTSA—fared worse than average in head injury protection but was a bit better than average on chest protection and did very well on leg protection for the driver and front-seat passenger.

The Yugo, along with a Buick Century coupe and sedan and a Mazda 323 LX two-door hatchback, were the first 1986 cars crashed at 35 MPH by NHTSA.

Safety standards require only that cars pass 30-MPH crash tests. But since 1979, NHTSA has been crashing cars at the higher speed—and one-third more force—to give consumers data on how well models of the same size and weight compare.

Anthony Ciminera, executive vice president—product planning for Yugo of America, said that he fears that the media will cause confusion among the public in reporting the results of the 35-MPH crash.

"This differential of only 5 MPH seems insignificant to the general public, but it results in 36 percent greater energy than the 30-MPH test. It is important to note that no car is required to pass this test," Ciminera said.

Ciminera, stressing that the Yugo passed the required 30-MPH crash test, said that 11 of the 17 cars tested by NHTSA in 1985 failed the Head Injury Criteria test at 35 MPH, and that all of those cars were heavier than the Yugo.

The Yugo showed a HIC of 1415 for the driver and 1318 for the front-seat passenger. The lower the rating, the better, and an HIC of 1000 at 30 MPH is considered acceptable for meeting safety standard 208. NHTSA has released graphs indicating that the HIC figures are of most importance because they indicate the likelihood of survival for an average driver or front-seat passenger wearing a seat belt correctly.

Ciminera said that five of the cars that failed the HIC test in 1985 recorded higher HIC numbers than the Yugo. Those were: Chevrolet Astro, 2202; Dodge Lancer, 2187; Chevrolet Spectrum, 1559; Renault Alliance, 1519, and Mazda B-2000, 1434.

He also said that a check of NHTSA HIC records since the 35-MPH crashes were begun in 1979 will show that "the Yugo outperformed vehicles that are substantially larger, heavier and cost thousands of dollars more."

Ciminera said he contacted NHTSA for an explanation of the necessity of the 35-MPH crash and for reasons why results were released piecemeal. The agency had not responded at presstime.

The Yugo's driver chest deceleration load was 59 Gs; for the passenger, it was 38. Again, in 30-MPH crashes, chest Gs can be as high as 60 and still be acceptable.

Femur loads for driver, left and right, were 870 and 86 pounds, and passenger femur loads, left and right, were 695 and 525 pounds. Standard 208 allows femur loads of 2,250 pounds in 30-MPH crashes.

The two Buicks and the Mazda did much better than the Yugo on the critical head injury numbers,

New York sues Ford on lemon-law charge

By John A. Russell
New York Staff Writer

ALBANY.—Ford Motor Co. was sued last week by the state attorney general for allegedly violating the state's lemon law.

Atty. Gen. Robert Abrams charged in State Supreme Court here that by imposing a $100 deductible on consumers who use the company's extended warranty, which usually takes effect after one year or 12,000 miles, the company is violating the state's 1984 lemon law.

Under that law, repairs under warranty must be provided free of charge during the first 18,000 miles or two years after purchase of the vehicle.

While Ford was the only manufacturer sued, the suit also affects other manufacturers, including Chrysler, which follow similar policies.

That is the only requirement of the law which Ford is charged with violating.

A spokesperson for Ford Motor Co. said in a statement that the company "believes our powertrain warranty is in compliance" and " the lawsuit should not have been brought."

The spokesperson added that the company's warranty is similar to those of other manufacturers.

Abrams said "Ford's interpretation defies the plain language of the law that a defect covered by a warranty shall be corrected at no charge to the consumer. Consequently, we allege that Ford engaged in repeated illegal conduct by imposing this deduction."

This could be a costly suit if Ford is found to have violated the law. In addition to seeking an injunction on the company to cease the practice, the attorney general is asking the court to order Ford to make full restitution to all consumers who paid the charge.

Assistant Atty. Gen. Rachael Kretser, head of the Albany office of the attorney general's Consumer Fraud Bureau, told Automotive News she had no estimate on the numbers of consumers that are involved nor any estimate on the cost to the company.

Service, parts gains continue rapid clip

By Arthur Flax
Service Editor

Service and parts business at new-car dealerships continued to climb in 1985. The increase was especially impressive since it followed a year of record gains.

In 1985, the Automotive News Service Index showed that shop business at dealerships amounted to 107.5 percent of that in 1984. During 1984, shop business increased 113.5 percent, the greatest gain in the 24-year history of the Service Index.

November was the only month in 1985 to show a decline in business with a mark of 98.1 percent of that recorded in November, 1984.

According to the Service Index, business bounced back in December and amounted to 110.2 percent of the volume recorded in the same month of 1984.

All indicators for full-year 1985 and for December were positive.

The category with the biggest gain through 1985 was total labor sales (including both customer paid and warranty) with an increase of 10.9 percent over the previous year.

Repair orders written registered a gain of 8.2 percent during 1985. Gross profit on all labor parts and accessories sales scored a 7.7-percent increase for the year. Shop parts sales (customer and warranty) were up 6.2 percent, and sales of all parts and accessories showed a 4.5-percent increase.

Sales of all parts and accessories to off-the-premises customers were up 4.3 percent for 1985, compared with 1984.

The total labor sales indicator also registered the top increase in December, up 14.3 percent over the previous December. Gross profit on all labor, parts and accessories sales was up 14.2 percent during the 1985 month as compared with a year earlier.

Repair orders written showed an 8.0 percent increase and shop parts sales climbed 5.6 percent. Sales of all parts and accessories were up 4.7 percent.

Sales of all parts and accessories to off-the-premises customers were up 4.0 percent in December, 1985, compared with December, 1984.

Figures used in the Service Index are averages compiled from reports on shop business from a cross-section of the nation's new-car dealerships.

SERVICE INDEX

98.1★

	Dec., '85 vs. Dec., '84	12 mos., '85 vs. 12 mos., '84
Gross Profit on All Labor and P&A Sales	+14.2%	+7.7%
Repair Orders Written	+8.0%	+8.2%
Total Labor Sales (Customer & Warranty)	+14.3%	+10.9%
Shop Parts Sales (Customer & Warranty)	+5.6%	+6.2%
Sales of All P&A	+4.7%	+4.5%

★—Survey by Automotive News shows that dealers' service and parts business in December, 1985, was 110.2 percent of business in November, 1984. Service business during all of 1985 was 107.5 percent of business in the corresponding period in 1984.

Ford boosts V-6 and V-8 prices

By John K. Teahen Jr.
Senior Editor

Ford Motor Co. last week raised the prices of its optional V-6 and V-8 engines and also hiked the stickers on some of the cars that have a V-6 or a V-8 as standard equipment.

Ford said the action is designed to improve its CAFE average. Apparently, the thinking is that a higher price may dissuade some customers from purchasing the larger, lower-MPG power plants, either as optional or standard.

Price hikes are $61 on the optional V-6 and $91 on the optional V-8. Because of the discount structure, the bump is $58 to $123 on models that carry those engines as standard equipment.

Ford said the boosts on optional engines and some cars represent an average hike of less than two-tenths of one percent when applied to its entire domestic fleet of cars.

There was a $58 increase on the Ford Mustang LX convertible. At the top of the list, there were $123 hikes on the Lincoln Mark VII LSC, the Bill Blass and the Lincoln Continental Givenchy. There were boosts of $61 on Ford Taurus and Mercury Sable models that have a V-6 as standard equipment.

Several car lines on which the bigger engines are standard were exempt from the increase. There were no boosts in base prices of the standard-sized Ford Crown Victoria, Mercury Grand Marquis and Lincoln Town Car, all of which have V-8s. Also bypassed were the Ford Thunderbird and Mercury Cougar models that have a V-6 as standard. The optional V-8 for Thunderbird and Cougar went up, however.

There were no increases in the base prices of small cars which have 4-cylinder engines as standard—Ford Escort and Tempo and Mercury Lynx and Topaz.

Mazda prices rise 4.3 pct.

By John K. Teahen Jr.
Senior Editor

It was Mazda's turn to raise imported-car prices last week, and this week the pointer may stop at Nissan. Nissan has told its U.S. dealers that a boost is coming, but it hasn't told them how much it will be. About 5 to 6 percent is anticipated.

Mazda said its increase averaged $386, or 4.3 percent, on cars and trucks. The company did not supply a car-truck breakout, but the hike on cars is estimated at well over $400.

The raises ranged from $150 on the base 323 two-door hatchback to $950 on the RX-7 GXL sports car.

It was Mazda's third hike on 1986 models.

The base 323 hatchback now is $5,795, up $600 in the past year. Other 323 models are $1,100 to $1,300 more than GLC models were at this time last year. This time, 323 models, other than the base unit, rose $400.

In the 626 series, the starter is the Deluxe four-door sedan at $9,295. It went up $300 last week and is up $800 since last March. All 626 models climbed $300-$400 last week and have risen $700-$800 in the past year.

The RX-7 jumped $700 and is now $13,595. The RX-7 has been redesigned for 1986, and the base model is $2,650 more than it was a year ago. The RX-7 GXL went up $950 last week and now is $18,445.

The RX-7 Turbo went up $861, to $20,195.

Mazda pickup trucks were increased $100 to $500.

Nissan repriced some models last week as it introduced its 1987 Sentra, Stanza and Maxima lines. The base Sentra two-door sedan climbed $350 to $5,999—it was $5,499 a year ago. Nissan said the full Sentra series went up 6.3 percent last week.

The Maxima four-door sedan, at $15,199, rose $740 last week—5.1 percent is up $1,700 since last March.

Mitsubishi's Diamond Care aims at buyer satisfaction

Continued from Page 20

the dealerships to make the three-part Diamond Care program work. Benson said new training materials, including videotapes, are being sent to the dealerships to bolster product knowledge on the sales side. In addition, salespersons are given a vehicle-delivery checklist to go over with the customer on delivery as an orientation program for the buyer.

Benson said participation of the salesperson in the delivery process is vital and often is overlooked as a way to build customer satisfaction. Too many times, he said, the customer picks up the keys to a $10,000-plus purchase from the cashier, not the person who sold the car.

In the backshop, MMSA has boosted the allowance for pre-delivery inspection by two-tenths of an hour and is recommending that all dealers deliver cars with full tanks of gas.

While it doesn't seem like much on the surface, Benson said the extra time means the difference between rushing through PDI or using the allowance to go over the car one more time and catch small things that may be missed on the first go-around.

In addition, MMSA has an incentive program for technicians in which they can earn prize points based on customer satisfaction with their delivered vehicle.

Perhaps the most important element in Diamond Care is follow-up, according to Benson. After the sale, the customer receives an invitation to return after 1,000 miles to have the car checked and adjusted. MMSA has a service allowance of three-tenths of an hour for that. Benson stressed that the followup is an invitation.

"In the industry, we've gotten away from the 1,000-mile inspection," he said. "We're careful not to call it an inspection. There is nothing in it that says you have to come in."

However, if a customer chooses to come in, it gives the dealer an opportunity to establish a service relationship that will continue.

"We want to make the delivery and the 1,000-mile invitation a positive experience," Benson said.

Diamond Care is the latest element to be added to MMSA's Triple Diamond Service program, according to Benson. Another addition is the Tech Line, which provides a toll-free number service managers can call if they encounter a problem in servicing or repairing vehicles.

Benson said support personnel, recruited from the ranks of field service management, man two phones, one in MMSA's New Jersey regional office and the other here in Fountain Valley, during business hours.

If a technician runs into a problem he can't solve, he takes it to the service manager who must place the call to Tech Line. A file is opened and possible fixes are discussed.

Once a fix has been found, it is recorded in the computer file and the dealer keeps a copy of the worksheet.

Car audio aftermarket group plans strategy against OEMs

WASHINGTON.—Sidney Dickstein, legal counsel for the Car Audio Specialists Assn. (CASA) announced that the group intends to use litigation in its efforts against vehicle manufacturers' installing audio systems as standard equipment on automobiles.

During the group's semiannual business meeting, which was held during the Winter Consumer Electronics Show, CASA officials discussed legislative, consumer education and litigation strategy to use against OEMs.

The meeting was attended by aftermarket distributors and retailers.

Barry Casoli, CASA president and co-partner in Hammond Electronics, Columbus, Ohio, said the group is launching a fund-raising drive and membership recruitment campaign to prepare for "aggressive action against the car manufacturers."

A consumer education campaign will focus on making "new-car buyers aware that the radio delete option does not extend to pre-installed audio equipment after the cars reach dealerships," said Cheryl J. Hollins, CASA executive director.

The group will use statistics collected on consumer opinion forms to approach legislators on a state-by-state basis, Hollins said.

CASA's Specialty Car Audio Workshop, attended by about 300 people, discussed "'exotic' automobile engineering and OEM electronic developments . . . that challenge the car audio aftermarket to remain competitive with the vehicle manufacturers," CASA said.

The group decided to create approximately 25 network centers throughout the country to promote involvement with the organization. Regional seminars will also be held.

Porsche opens training center in Midwest

Continued from Page 20

ized dealers, Bruce R. Mundy, service organization manager, told Automotive News.

Chicago-area dealers who attended the opening reception said the base salary for their employes is about $40,000, with some earning $60,000 or more because they are paid a base rate plus incentives for accurate, speedy work.

Bruce Semersky, general manager of The Porsche Exchange, Highland Park, Ill., and Len Pecktold, manager of Ed Mathieu Imports, Chicago Heights, Ill., said they were considering taking the course themselves.

Gilman said the facility will train all levels of technician from apprentice to master.

"Our goal is to have the best mechanic training program in the imported auto market," he said.

Mundy said Porsche North America expects another record-breaking year for sales, led by the 944 Turbo and the 924-S, which will be introduced later this year.

Last year, sales were up 24 percent over 1984 levels.

The metropolitan Chicago area is a leader in the shift in Porsche sales nationwide away from the California market, Duffy said.

California, which once accounted for 50 percent of all U.S. sales, now is closer to 20 percent, Duffy said. Florida, New York, New Jersey and the District of Columbia also are strong markets, Mundy said.

The Porsche Exchange in suburban Highland Park and Lynch Porsche, Chicago, are currently running nip and tuck for leadership in Midwest sales, Duffy said.

Phoenix Isuzu dealers donate zebra to zoo

PHOENIX.—The Valley of the Sun Isuzu dealers have contributed a zebra named Isuzu to the Phoenix Zoo.

The zebra, worth $6,000, will be part of the new zoo section designed to simulate the African veldt.

Premature tire wear a problem

By Jake Kelderman
Washington Reporter

WASHINGTON.—When Irene Marsh, of Greenville, S.C., looked at the rear tires of her 1985 Oldsmobile Toronado recently, she had an unpleasant surprise. With fewer than 6,000 miles on the car, the rear tires were already badly worn and seemed ready for replacement.

Iris Jorosh, also of Greenville, had the same experience just three months after she bought her 1985 Cadillac Seville.

Marsh and Jorosh are not the only owners of newer American front-wheel-drive cars who have had that experience.

L. Dwellion Howard, service manager at Bradshaw Oldsmobile-Cadillac, Inc., Greer, S.C., said he sees people like Marsh and Jorosh nearly every day of the week, as do many other dealers in South Carolina.

Indeed, talks with tire makers and tire dealers as well as with automobile manufacturers and dealers indicate that premature tire wear in newer-model cars is commonplace nationwide.

"It's a problem that definitely has our attention," a General Motors spokesman said.

"We've looked at it and made some adjustments," said a Ford Motor Co. spokesman.

No one seems to know just how widespread the problem is, but it has occurred frequently enough to cause the Center for Auto Safety to ask NHTSA to look into it. The safety agency has declined to do so, however, on the grounds that it is not a safety-related problem.

The auto company spokesmen, as well as some engineers, say that the premature tire wear seems to be the result of a combination of factors. Those include four-wheel independent suspension systems, unrealistic suspension settings and more aggressive tire-tread patterns.

Typically, the rear tires on fwd cars and the front tires on rear-wheel-drive cars manifest the condition first, sometimes in as few as 3,000 miles.

The shoulders of the tires usually wear first in a condition called cupping, followed by what is called scuffing of the tire tread itself.

According to the auto company spokesmen, the premature tire-wear problem is one that primarily affects the new all-season tires now commonly used as standard equipment on U.S.-produced automobiles. It is not a problem specific to any one tire manufacturer's product, the spokesmen said.

Ford was the first to experience the problem in a big way on its Escort and Tempo/Topaz models.

In November, 1984, it sent a notice to half a million owners of those vehicles telling them to bring the cars to their dealerships to check the rear-wheel alignment and correct it if necessary.

Subsequently, Ford extended the tire warranty on the Tempo/Topaz models.

To correct the tire-wear problem, in mid-1985 Ford also made in-plant changes to the suspension settings of both Escort and Tempo/Topaz and made the rear suspension point settings more accessible to servicing.

Ford also issued service bulletins for its LTD, Marquis, Fairmont, Zephyr, Thunderbird and Cougar models. The service called for adjusting the camber and toe settings to compensate for the tire-wear problems.

The GM vehicle most seriously affected by the tire-wear problem has been the mid-engined Pontiac Fiero.

In May, 1984, GM issued a service bulletin to Pontiac dealers cautioning them that rear alignment should be measured and reset, if necessary, when excessive tire wear is encountered. "For best tire wear, toe-in should always be set to the low end of the specification," the bulletin said.

More recently, GM extended warranty coverage to tires on all its 1984-1985 models and issued a technical bulletin to all its dealers stressing the need to rotate tires on affected models on a fixed schedule.

GM recommends the first such tire rotation at 7,500 miles and then every 15,000 miles, though company sources said it would prefer that rotations be made earlier and more frequently.

Unlike in the past, GM is recommending that tire rotation be done in a "cross X" pattern—that is, the left rear tire goes to the right front, the right rear tire to the left front and the front tires move straight to the rear.

The GM cars most likely to be affected by premature tire wear are the fwd A and E series. GM recommends that toe-in on those vehicles be set at 0 degrees.

"As far as current production is concerned, this problem is behind us," the GM spokesman said.

The tire makers, meanwhile, are hesitant to talk about the problem because they believe it is largely Detroit's doing.

According to the tire manufacturers, GM and Ford specify OEM tread patterns and tire characteristics and establish their own suspension settings, so what happens to the tires is not entirely under the tire makers' control.

Fred Caraway, manager of product service at Goodyear, denied there was any premature wear problem with Goodyear tires and maintained that—far from being aggressive—the tread pattern on Goodyear's all-season radials was the "best pattern" for such tires.

Goodyear now recommends that tires on automobiles and trucks be rotated at 6,000 to 8,000 miles and again at 18,000 and 24,000 miles, in an "X" pattern.

Firestone had no comment on the premature wear problem other than suggesting that questions be directed to GM and Ford.

Uniroyal now cautions its dealers and customers to rethink existing tire maintenance practices in light of the high-tech tire/car combinations now on the road.

Tires should be rotated the first time between 6,000 and 8,000 miles and at similar intervals thereafter to prolong tire life, Uniroyal said.

Meanwhile, Automotive News has learned that GM is working with the tire companies to make the tread patterns on the OEM all-season tires less aggressive.

OUR new SPIN-OUT TRUST*

creates a new opportunity to save thousands of dollars under recent tax laws!

If you have an existing profit-sharing retirement plan, we can "spin you out" and install a new plan for you with these benefits:

- You can enjoy 100% of the Spin-Out contribution!
- Your account can increase beyond the $30,000 limit!
- You can, for example, contribute $50,000, $100,000, $150,000 or more into your yearly account, tax free!
- Your contribution is 100% tax deductible!
- Your funds grow tax free!
- You control the money in the plan!
- I.R.S. approved.

*A tax-exempt trust from the originator of the Carve-Out Trust.

Jerry Orefice has addressed national conventions, associations and "Twenty Groups". He's published articles in national magazines and also appeared on T.V. as a commentator on dealer tax planning and the Carve-Out Trust. Our firm has its own in-house legal counsel and a reputation for working successfully with the top dealers in the country.

If you're paying too much tax or not getting your money's worth from your present plans and counselors, call Jerry now, collect: (818) 707-0917.

Signal Automotive to build catalyst plant in France

TULSA.—Signal Automotive Products, a unit of Allied-Signal, Inc., said it will establish a French facility to provide automotive emission control catalysts for European auto makers.

The facility, to be developed at a site to be named later, will be the first European automotive catalyst manufacturing plant for Tulsa-based Signal Automotive Products.

The facility is expected to be in operation in early 1988.

Included in the plan is a catalyst development and testing facility which will enable the division to work closely with European auto makers.

Thomas K. Walker, the division's president and general manager, said the facility will be built because of continuing decisions by European Common Market nations that will lead to the widespread use of catalytic systems to control automotive emissions in Europe.

Toyota cited for sales-credit plan

TORRANCE, Calif.—The Center for Public Resources, a nonprofit organization dedicated to developing alternatives to litigation, presented Toyota Motor Sales, U.S.A., Inc., with its Most Significant Practical Achievement award, honoring Toyota's Reversal Arbitration Board.

The RAB—Toyota's alternative to the high cost of litigation—is the brainchild of William A. Plourde Jr., TMS/USA associate general counsel—administration and business operations, and David Laufer, the company's managing counsel.

In mid-1984, faced with a flood of dealer disputes containing allegations that Toyota was unfairly denying them sales credit, Plourde and Laufer conceived of creating an independent panel of arbitrators to hear dealers' cases and determine the proper awarding of sales credit.

"Toyota allocates vehicles to its dealers based on how many vehicles the dealership sells to 'ultimate retail customers,'" Plourde explained.

"Ultimate retail customers are defined as purchasers who buy a vehicle for end use rather than for resale. For every ultimate retail sale a dealership makes, TMS/USA awards the dealership one 'retail sales credit,' good toward its next vehicle allocation.

"However," Plourde said, "only one sales credit is given per vehicle. If a dealer—knowingly or unknowingly—sells a vehicle to a broker, who then sells the vehicle to another dealer, who resells to the 'ultimate retail customer,' the second dealer is awarded credit for the sale, and the first dealer loses the credit."

Due to the high demand for Toyotas, Plourde said, some dealers try to raise their car allocations by buying cars—through brokers—from other dealers and then selling the cars to ultimate retail customers. Such a dealer then requests Toyota to reverse the sales credits given to the first dealer and reassign them to him.

The first dealer then protests the action, saying he sold the cars in good faith to the broker, believing the broker was an ultimate retail customer.

Faced with escalating expenses and mounting dealer hostility over the sales credit issue, Laufer and Plourde developed the concept for a nationwide network of arbitrators to resolve these dealer disputes in a quick proceeding.

Plourde and Laufer selected a panel of nine attorneys, including seven former judges, located in major U.S. cities. Those arbitrators conduct informal hearings—averaging one hour long—in locations as close as possible to the dealers requesting the hearing.

Since the program's inception last May, the RAB has conducted more than 150 hearings in 17 cities in 13 states, resolving dealer disputes involving the allocation of hundreds of vehicles.

A survey of 62 dealers who participated in RAB hearings revealed general satisfaction with the system.

In addition to reducing the number of hearing requests, said Plourde, the RAB has improved Toyota's relations with its dealers, reduced its legal expenses and freed the distribution department to distribute vehicles.

Corporate Coachworks, Springfield, Mo., introduces the Wide-Body limousine, which features a five-inch stretch in width. The 60-inch-wide vehicle provides comfortable seating for three passengers in the rear seat, the company said.

1985 car registrations top 10.8 million; 3rd best ever

By Jenny L. King
Detroit Reporter

New-car registrations in the U.S. in 1985 climbed to their best total in seven years and entered the books as third highest behind 1973 and 1978.

Figures from R.L. Polk & Co., which gathers registrations from 49 states and sales information from Oklahoma, showed 1985

Table on Page 22

U.S. new-car registrations at 10,888,608, up 7.50 percent from 10,128,729 a year earlier, and up 22.01 percent from the 1983 total of 8,924,186.

Record registrations of 11,350,995 were reported back in 1973, with the 10,946,104 of 1978 second best.

Domestic registrations in 1985 totaled 7,877,476, up 3.59 percent from 7,604,755. Imports, which expanded to 27.65 percent of the market from 24.92 percent, were up nearly 500,000 units, to 3,011,132 from 2,523,974.

R.L. Polk counts Volkswagen Golf and Honda Accord models built in the U.S. as imported cars in its tabulations.

For the year, only Chrysler Motors and the imports improved their positions in the U.S. market. Chrysler was up 0.79 percentage points, to 10.30 percent from 9.51 percent, and the imports gained 2.73 percentage points.

General Motors forfeited 2.35 percentage points, Ford Motor Co. was down 0.49 percentage points and American Motors was down 0.68 percentage points.

Domestic nameplates reporting gains for 1985 were Chrysler, Plymouth, Dodge, Lincoln and Pontiac.

December, 1985, registrations moved up 9.84 percent from the November total and kept a slender margin of plus 1.90 percent over the December, 1984, total. Last December, 849,088 new domestic and imported cars were entered on the states' rolls compared with 773,042 in November and 833,219 in December, 1984.

Domestics were up 8.78 percent month to month, climbing to 555,104 in December from November's 510,303. December, 1984, domestic registrations were 607,366.

Imports were the growth area in December, scoring an astonishing 7.51-percentage-point gain in market share over the previous year, to 34.62 percent from 27.11 percent. Imports totaled 293,984 for the month, up almost 70,000 from 225,853 in December, 1984.

Imports, with 34.62 percent of the total, were by far the largest market segment. U.S. intermediates had 24.09 percent in December, compacts had 15.65 percent, subcompacts had 10.47 percent, luxury models had 8.15 percent and standards had 7.02 percent.

The domestics-only market included 36.84 percent intermediates, 23.94 percent compacts, 16.01 percent subcompacts, 12.47 percent luxuries and 10.74 percent standards.

In December, GM lost 2.13 percentage points in overall market share, Ford plunged 3.72 percentage points, Chrysler was off 1.01 percentage points and AMC tumbled 0.65 percentage points. The imports' gain of 7.51 percentage points balanced those losses.

Japanese makers join in research on clean diesel

TOKYO.—Eight Japanese automobile manufacturers and an agency affiliated with the Ministry of International Trade and Industry will establish a research institute to develop a new clean diesel engine.

MITI said the institute, tentatively called Clean Diesel Laboratory, will try to develop a diesel engine with low nitric oxide and exhaust emission within six years. The auto makers applied to the MITI-affiliated Japan Key Technology Center (Japan Key-Tec) to invest $103,450 in the project.

The center, according to MITI, would be founded with an initial $251,000 and is expected to spend $19.7 million for research purposes in the next six years.

The eight firms in the project are Hino Motors, Ltd.; Nissan Diesel Motor Co.; Nissan Motor Co.; Toyota Motor Corp.; Mazda Motor Corp.; Daihatsu Motor Co.; Mitsubishi Motors Corp., and Isuzu Motors, Ltd.

Stock of domestic new cars nears 2 million

Continued from Page 1

duction of its Golf and GTI models in early February.

Mainly because of slower sales, the following models show a sharp increase in days' supply: Laser, Daytona, New Yorker, Chevette, Firenza, Fiero, Pontiac 1000, Firebird and Pontiac 6000.

The increases in the days' supplies of Laser and Pontiac 1000 are a bit misleading: The inventories of those two nameplates in particular increased only slightly during the month. But because they are low-volume lines, even small sales-rate declines result in exaggerated days-supply increases.

Showing notable decreases were Alliance, Encore, LeBaron GTS, Lancer, Regal, Chevrolet and Parisienne.

March 1 inventories were shared as follows: GM, 61.03 percent; Ford Motor Co., 19.16; Chrysler Corp., 16.21 percent; American Motors, 1.88 percent; Volkswagen , 1.02 percent; Honda, 0.35 percent, and Nissan, 0.35 percent.

A month earlier, the standings were: GM, 61.56 percent; Ford Motor Co., 19.00 percent; Chrysler Corp., 15.50 percent; American Motors, 2.17 percent; Volkswagen, 1.07 percent; Honda, 0.37 percent, and Nissan, 0.33 percent.

By size class, the March 1 inventory was divided this way: Subcompact, 16.97 percent; compact, 22.15 percent; intermediate, 37.25 percent; standard, 13.29 percent, and luxury, 10.34 percent.

Shares a month earlier were: Subcompact, 16.61 percent; compact, 22.21 percent; intermediate, 37.99 percent; standard, 12.83 percent, and luxury, 10.36 percent.

Domestic models by size class and days' supply on March 1: Subcompact—Laser, 279; Encore 199; Daytona, 175; Chevette, 129; Fiero, 128; Pontiac 1000, 121; Turismo, 94; Alliance, 92; Charger, 90; Volkswagen, 78; Omni, 65; Horizon, 61; Nova, 59; Lynx, 58; Escort 47; Nissan, 23; Honda, 11.

Compact—Firenza, 166; Skyhawk, 156; Capri, 155; Camaro, 142; Eagle, 138; Firebird, 120; Cimarron, 105; Mustang, 88; LeBaron, 81; Aries, 67; Sunbird, 60; Reliant, 54; Cavalier, 52; Tempo, 42, and Topaz, 39.

Intermediate—Lancer, 138; Monte Carlo, 135; Calais, 125; Dodge 600, 125; New Yorker, 125; LeBaron GTS, 110; Caravelle, 104; Citation, 103; Grand Prix, 95; LTD, 87; Marquis, 85; Pontiac 6000, 77; Regal 77; Century, 75; Bonneville, 72; Somerset Regal, 66; Celebrity, 65; Thunderbird, 65; Cutlass Supreme, 59; Cougar XR-7, 56; Cutlass Ciera, 54; Grand Am, 43; Sable, 43, and Taurus, 41.

Standard—Chevrolet, 128; Parisienne, 106; Oldsmobile 88, 94; LeSabre, 88; Crown Victoria, 87; Grand Marquis, 82; Diplomat, 65, and Plymouth, 53.

Luxury—Corvette, 157; Fifth Avenue, 116; Electra, 103; Riviera, 101; Seville, 98; Toronado, 87; Eldorado, 86; Continental, 80; Mark VII, 69; Lincoln, 55; Cadillac, 48, and Oldsmobile Ninety-Eight, 39.

Supply of imports near 3-year peak

By Kathy Boyer
Detroit Reporter

The stockpile of new imported cars on March 1 increased only slightly from the month-earlier figure but the days' supply was the highest in almost three years.

There were 333,893 new imported cars in port and dealer inventory on March 1. That compared with 329,798 a month earlier and 250,216 a year earlier.

The 37-day supply on March 1 was the highest since the 40-day stock recorded for May 1, 1983. Days' supply had been 36 on Feb. 1 of this year and 31 on March 1, 1985.

The inventory of new imported trucks hit a 42-month high on March 1. The total of 138,800 was the highest recorded since the 153,032 reported on Sept. 1, 1982.

The truck inventory had been 124,781 a month earlier and 87,383 a year earlier.

The 48-day truck supply was unchanged from the previous month, which was the highest since the 55-day supply recorded on Dec. 1, 1983. A year ago, the figure had been 30 days.

The combined imported car and truck inventory March 1 totaled 472,693, the highest since Jan. 1, 1983, when 487,851 units were reported. The current total compares with the 454,579 a month earlier and 337,599 a year earlier.

On March 1, import-car inventory was split this way: Japan, 64.00 percent; Germany, 24.20 percent, and other countries, 11.80 percent.

A month earlier, the shares were: Japan, 65.07 percent; Germany, 22.95 percent, and other countries, 11.98 percent.

Cars by country of origin and the March 1 days' supply were as follows: Japan—Toyota, 8; Honda, 8; Mazda, 21; Mitsubishi, 24; Subaru, 28; Nissan, 39; Isuzu, 51; Chrysler Corp., 71, and Chevrolet, 138, (including 83 for the Suzuki-built Sprint and 193 for the Isuzu-built Spectrum).

Germany—Mercedes-Benz, 20; BMW, 40; Porsche, 65; Volkswagen, 85; Merkur, 88, and Audi, 90.

Other countries—Jaguar, 16; Yugo, 35; Saab, 54; Volvo, 56; Alfa Romeo, 61; Peugeot, 63, and Renault, 275.

Trucks and their days' supply were: Toyota, 26; Mazda, 30; Nissan, 62; Chrysler, 67; Mitsubishi, 78, and Isuzu, 110.

All import truck figures include Nissan's U.S.-built models.

Early-March sales drop 4 pct.

By Jenny L. King
Detroit Reporter

Domestic new-car sales the first 10 days in March reflected a certain apathy on the part of consumers.

The sales total was down from a year ago, with General Motors the only U.S. maker to post a gain. It was the fourth decline in seven reporting periods this year.

The current incentive programs weren't bring as many sales as March 1-10 last year, when there were no widespread "bargains" to be had and the fast sales pace set in 1984 was beginning to show signs of weakening.

This year's early March total of 185,904 was down 3.99 percent from 193,625. GM was up 1.30 percent, while its competitors dropped from 10.03 percent to 32.83 percent.

GM domestic sales added to 104,952,compared with 103,604 in 1985. Ford Motor Co. sales were off 10.93 percent, to 47,592 from 53,435. Chrysler Motors reported an 11.56-percent decline, its sales down to 25,191 from 28,483.

American Motors' early-March sales estimate of 1,780 was down 32.83 percent from 2,650. Honda dropped 16.31 percent, to 3,786 from 4,524, and Nissan sales numbered 1,794.

GM's share of the market for the period was up three percentage points. Gaining some ground lost over recent years, GM grew to 56.45 percent from 53.51 percent. Ford was off, to 25.60 percent from 27.60 percent. Chrysler slipped to 13.55 percent from 14.71 percent.

AMC was down to 0.96 percent from 1.37 percent. Volkswagen had 0.43 percent, compared with 0.48 percent a year earlier. Honda dropped to 2.04 percent from 2.33 percent and Nissan earned 0.97 percent.

Four makes posted sales gains over their 1985 levels: Chrysler was up 9.42 percent; Lincoln, 1.93 percent; Cadillac, 7.55 percent, and Oldsmobile, 31.62 percent.

Year-to-date sales were 2.15 percent below the 1985 level, slipping to 1,435,179, compared with 1,466,685.

Ford's subcompact Escort was the period's top-selling nameplate with 8,697 units delivered.

Canadian car sales jump

By Jenny L. King
Detroit Reporter

February new-car sales in Canada were up an impressive 13.61 percent, with North American-built products climbing to 58,615 units from 51,593 a year earlier.

Trucks were up 29.60 percent, to 26,270 from 20,270.

The car-sales increase was due to big gains for General Motors and Ford, the first and second-ranked auto makers. Chrysler, American Motors and Volvo all reported declines in February.

GM sales totaled 31,361, up 22.51 percent from 25,599. Ford scored a 21.47-percent increase, with sales up to 14,522 from 11,955.

Chrysler dipped to 11,080 from 11,661, a 4.98-percent difference. AMC was down 34.47 percent, to 1,194 from 1,822 (including 323 imported Renaults this year, versus 629 in 1985). Volvo reported sales of 458 new cars, down 17.63 percent from the year-ago month's 556.

GM's share of the February market was up almost four percentage points, growing to 53.50 percent from 49.62 percent in February, 1985. Ford's share was up to 24.78 percent from 23.17 percent. Chrysler's dropped to 18.90 percent from 22.60 percent. AMC's shrank to 2.04 percent from 3.53 percent, and Volvo's was 0.78 percent, down from 1.08 percent.

Car sales at the end of two months were up 5.73 percent, to 106,243 from 100,489 a year ago. January sales of 47,628 had been down 2.52 percent from 48,896.

February truck sales, which include captive imports, shot up 29.60 percent to 26,270 from 20,270 a year ago, with increases posted by the four major truck makers.

GM reported truck sales of 11,566 last month, up 46.18 percent from February, 1985. Ford was up 26.52 percent, to 9,322; Chrysler, 4.90 percent to 4,500; and AMC Jeep, 26.00 percent, to 882.

Year-to-date truck sales totaled 49,997, up 22.62 percent from the year-ago period's 40,773.

Production

Production slips from year's high

By Kathy Boyer
Detroit Reporter

Last week's estimated domestic auto production of 176,257 units was down 3.43 percent from the previous week's 182,516, which was the highest of any week this year.

Last week's scheduled output was 1.83 percent more than the year-ago week's 173,094.

So far this year, according to unadjusted figures, 1,812,163 cars have been assembled, down slightly (0.95 percent) from the 1,829,584 completed last year at this time.

Last week's estimated output was shared as follows: General Motors, 55.77 percent; Ford Motor Co., 21.78 percent; Chrysler Corp., 15.26 percent; Honda of America Mfg. Co., 1.95 percent; New United Motor Mfg., Inc., 1.84 percent; American Motors, 1.28 percent; Volkswagen of America, 1.13 percent, and Nissan Motor Mfg. Co., U.S.A., 0.99 percent.

In a move to adjust inventories, GM has announced production halts at three car-assembly plants and one body plant.

Production of the Oldsmobile Cutlass Supreme and Buick Regal will be suspended March 31 for one week.

Output of the Chevrolet Chevette, which is built at the Lakewood (Ga.) plant, will cease for one week beginning March 24, affecting 2,700 employes.

Beginning today (March 17), the Van Nuys (Calif.) plant, which produces the Chevrolet Camaro and Pontiac Firebird, will be closed for two weeks, affecting 4,100 workers.

The Pontiac Fiero plant resumed production today after being down last week for inventory adjustment.

GM slated overtime Saturday (March 15) at its Tarrytown (N.Y.) plant.

Chrysler scheduled Saturday overtime at its Belvidere (Ill.), St. Louis (No. 2) and Newark (Del.) plants.

Ford scheduled no Saturday overtime.

Ford trucks set a one-day record

Ford Motor Co. assembled more trucks last Wednesday (March 11) at its U.S. and Canadian plants than on any other day in the company's 83-year history.

The record total was 6,927. It surpassed the previous record of 6,903 built on April 18, 1979.

VW workers ratify contract with Big Three wage parity

By Mary Connelly
Detroit Reporter

UAW workers at Volkswagen of America's Westmoreland (Pa.) assembly plant have ratified a three-year contract bringing them to wage parity with the Big Three.

An estimated 95 percent of the Westmoreland workforce will receive immediate pay increases ranging from 3 cents to $1.69 an hour to achieve parity. An assembler will now earn $13.46 per hour, including cost of living allowances.

The contract, ratified by 87 percent of those voting, also provides cost-of-living allowances; a lump-sum bonus in April, 1987, based on earnings, and a provision that Volkswagen will implement in March, 1988, any first-year wage increase negotiated at General Motors in 1987 bargaining. The bonus will amount to $620 for an assembler and $725 for an electrician.

The 2,200 UAW workers at Westmoreland also gained expanded outsourcing and job-security protection, the right to strike over subcontracting, 45 paid holidays during the agreement and improved benefits, the UAW said.

Contract settlement was also reached with the 730 UAW employes at VW's metal stamping plant in South Charleston, W.Va. The plant is for sale and VW said last September that it would phase out the facility within two years.

The 15-month agreement at the stamping plant was approved by 81 percent of those voting. It includes economic and non-economic provisions designed to cushion the impact of the plant closing, the UAW said.

Included are a severance income program, separation payments, early retirement provisions, a six-month continuation of health insurance coverage and job search and training programs.

A third tentative agreement was reached between Volkswagen and the UAW covering 350 union members at the company's air conditioning and heater plant at Fort Worth. That pact was scheduled for a ratification vote by UAW Local 129 Saturday (March 15). For the first time, the agreement calls for a common expiration date with the pact covering Westmoreland workers.

The UAW said the Westmoreland agreement also provides that a UAW logo will be placed on all vehicles assembled at the plant. It is the first time that a UAW contract has included such a requirement.

Truck production passes 700,000

Running a little ahead of 1985, domestic truck production passed 700,000 last week.

Year-to-date, 746,974 trucks have been assembled, 4.94 percent more than the 711,790 completed last year at this time.

Last week's output of 73,355 trucks was down 1.41 percent from the previous week's 74,402 but was 8.05 percent more than the year-ago week's 67,669.

General Motors slated Saturday (March 15) overtime at the following plants: Janesville, Wis.; Flint (Nos. 1 and 2); St. Louis; Baltimore, and Detroit.

Ford scheduled overtime Saturday at its St. Louis plant.

Chrysler's Warren (Mich.) plant resumes production this week (March 17) after being idle since the beginning of the year for model changeover.

Auto production in Canada hits high for year

Canadian auto makers last week scheduled their highest production of any week this year.

The targeted output of 26,090 cars was 7.75 percent more than the previous week's 24,214 and 27.80 percent more than the year-ago week's 20,415.

So far this year, 226,579 units have been assembled, 7.76 percent more than the 210,254 completed last year at this time.

Canadian truck makers also estimated their highest week this year.

The scheduled build of 19,630 was 1.39 percent more than the previous week's 19,360 and 5.10 percent more than the year-ago week's 18,678.

Year-to-date, 197,425 trucks have been assembled, 3.73 percent more than the 190,319 built last year at this point.

American Motors' Brampton (Ont.) plant reported production of the new Jeep Wrangler last week for the first time.

Acuras en route to dealerships

Acura, the luxury division of American Honda, launches its first shipment of cars from the Port of Long Beach. The cars will be transported to Acura dealers and go on sale Thursday.

Top Japanese cars show $1,028 boost

By John K. Teahen Jr.
Senior Editor

In the past six months, Japan's Big Four have raised the prices of the cars they sell in the U.S. an average of $1,028, or 10.70 percent, an Automotive News analysis discloses.

The increases have been applied to the 1986 models of Toyota, Nissan, Honda and Mazda which began appearing in dealer showrooms last fall. There were no hikes last spring and summer while the yen-dollar exchange rate was dashing merrily upward to a level of 240 to the dollar. The rate was 176 last Thursday.

The Japanese makers attribute their hefty boosts to the strengthening of the yen against the dollar.

Each of the four Japanese leaders has increased prices three times since last fall. Here are the average price hikes for those makers:

Toyota, $1,030, or 10.71 percent.

Nissan, $1,023, or 9.58 percent.

Honda, $849, or 10.34 percent.

Mazda, $1,225, or 13.59 percent.

Honda's dollar figure is below the average because it has no big-ticket sedans like the Toyota Cressida and Nissan Maxima and no expensive sports cars like the Toyota Supra, Nissan 300-ZX and Mazda RX-7. It's an axiom in auto pricing that the more-expensive cars get the biggest increases.

The RX-7 was a factor in Mazda's big boost. It's been redesigned for 1986, and the price structure has been redesigned, too.

While the Japanese prices have been heading skyward, the domestic makers have been rather silent. Domestic cars went up an average of about $400 at introduction time last fall, and the only action since then has been a boost in Ford Motor models with V-6 and V-8 engines.

Toyota and Nissan last week completed the current round of price hikes by Japan's Big Four. Mazda and Honda acted earlier in March.

"Current round" is a key term

Mazda's Familia Cabriolet

Japanese eye home market as yen rises

By Bob Berger
Special Correspondent

TOKYO.—Japan's auto makers, like most of the nation's manufacturers, have customarily directed most of their efforts toward development of overseas markets.

Domestic sales, though sizeable in many cases, have always been of secondary importance.

A marked change in strategy is now under way. Faced with such problems as the high-flying yen and threats of trade barriers, Japan's auto makers are introducing new models calculated to appeal to domestic buyers.

The introduction of these new cars heats up a domestic market that is already incredibly competitive.

Mazda Motor Corp. is pinning its hopes on its Familia line, and it recently added the sporty Familia Cabriolet. The company's do-

Toyota will set up U.S. plant six months early

By Bob Berger
Special Correspondent

TOKYO.—Toyota Motor Corp. announced it will begin car production at its U.S. plant in early 1988—about six months sooner than originally planned.

A Toyota spokesman indicated his company expects much sharper competition in the U.S. in the near future and believes that it is vital to start production as soon as possible at its new plant in Georgetown, Ky.

Toyota's concern over increased competition is based on such considerations as the reduced competitiveness of its export cars because of the yen's greatly increased strength, the resurgence of U.S. auto makers and the new presence of Korean cars in the U.S. market.

The groundbreaking ceremony for Toyota's plant in Kentucky is slated for May 5. The plant is scheduled to be completed in less than two years, at an estimated cost of $800 million. The plant will be situated on a 1,483-acre tract.

Toyota's current plan is to make 200,000 units of a 2-liter car each year in the initial stages of production. The company is studying the merits of also producing larger, more profitable cars in the future at its Kentucky site.

The Georgetown plant will have a high-grade welding line, exactly like the one being installed at the Tsutsumi plant in Toyota City. Robots will be used for certain applications. Much of the equipment for the Georgetown facility will be shipped from Japan.

Mitsubishi seeks to boost Diamond-Star capacity

By Geoff Sundstrom
Washington Reporter

WASHINGTON.—Mitsubishi Motors Corp. apparently will seek to increase the annual output of the Mitsubishi-Chrysler joint-venture plant in the U.S. to 240,000 units annually from the 180,000 originally planned.

Mitsubishi President Toyoo Tate said he wants additional output at the Diamond-Star Motors plant because the increased value of the Japanese yen has made U.S. production more competitive, according to Japanese press reports.

The reports said Tate will soon meet with Chrysler Corp. Chairman Lee Iacocca to discuss expanding production to 240,000 units annually.

A Chrysler spokesman said the company could not confirm whether a meeting between the two executives will take place, but he said "meetings are going on all the time between the two companies." He added, "The plant is being designed to allow for expanded production. I'm sure it could handle 240,000 units."

In January, Chrysler Motors Chairman Gerald Greenwald hinted broadly of increased production plans for the Bloomington (Ill.) facility.

He said at that time, "As both Mitsubishi and Chrysler continue to research the car we have in mind, we're getting more and more bullish about its market potential.

The plant is slated to start production in 1988. Construction begins this spring. Initial plans called for 2,500 employes.

Henry II at the helm of grandfather's ore carrier

Henry II reminisces

Henry Ford II had a happy, carefree boyhood even though it wasn't exactly typical. After all, he was a member of one of the wealthiest and most famous families in America.

Ford talked about his early years with David L. Lewis, University of Michigan professor of business history and Ford's official biographer.

The reminiscence is part of the Henry Ford II memoir that will be published posthumously. A portion exempted from the publishing agreement is included in the Spring, 1986, issue of the university's Michigan Quarterly Review, which is devoted to Detroit: An American City.

In the memoir, Henry Ford II tells how he learned to drive an automobile with one of the world's most distinguished instructors—his grandfather, automotive pioneer Henry Ford.

"My grandfather taught me how to drive," the younger Ford recalls. "He made me drive right through the city of Detroit at 12 years of age. I was frightened to death. Of course, I didn't have a driver's license. But he said, 'Oh, it will be good for you.' So he taught me how to hold my hands on the steering wheel and how to shift gears and how to drive a car."

Henry Ford II has fond memories of his grandfather:

"I remember him as a great guy. You know, it's a different relationship that you have with a grandparent than you have with a parent. My brother Benson and I spent weekends at Fair Lane (the grandparents' Dearborn estate) to the point where it irritated our parents.

"We loved it, and we were asked (to visit) continuously . . .

Cappy rises to president at AMC

By Richard Johnson
Detroit Reporter

Joseph E. Cappy was elevated to the top job at American Motors last week in line with the recent expansion of former President Jose Dedeurwaerder's duties at Renault.

The AMC board of directors named Cappy president and chief executive officer, replacing Dedeurwaerder. Cappy formerly was executive vice president and chief operating officer, but has essentially run day-to-day affairs since Dedeurwaerder was given a major position at Renault in early January.

Joseph E. Cappy

Dedeurwaerder will be AMC vice chairman and will continue as chairman of the Executive Committee.

AMC also announced last week that Jean-Marc Lepeu, vice chairman and chief financial officer, will be returning to Renault as Dedeurwaerder's chief of staff for automotive operations. John P. Tierney, AMC vice president of Finance Staff and controller, will succeed Lepeu as vice president and chief financial officer.

Cappy's promotion had been in the works for a considerable time,

Industry's TV ad buys climb 15 pct. in '85

By Edward Lapham
Marketing Editor

Spending for automobile television advertising increased 15 percent in 1985 to an estimated total of $1.69 billion, according to the Television Bureau of Advertising (TVB).

The total includes spending by manufacturers, dealer ad associations and individual dealers.

The corresponding 1984 total was $1.47 billion, TVB said.

TVB analyzes data supplied by Broadcast Advertising Reports, which monitors the top 75 U.S. markets.

According to the Broadcast Advertisers Reports data, total TV ad spending by the manufacturers last year increased 8 percent to $1.04 billion from $963.6 million in 1984.

TVB said network advertising, at $737.3 million, accounted for 44 percent of total automotive ad spending compared with 47 percent, $689.3 million, in 1984.

Spot TV spending by the manufacturers was $306.7 million last year, compared with $274.4 million in 1984.

Spending by dealer ad groups, according to the data, rose 35 percent to $337.4 million in 1985 from $249.3 million the preceding year.

However, BAR acknowledged that the factory spending figure for spot TV may be overstated and the dealer ad group spending figure may be understated.

TVB said the TV ad spending by individual dealers rose 21 percent to $311 million from $257 million in 1984.

According to the BAR data, Ford Motor Co. was the top TV advertiser in 1985, posting a 14-percent increase in TV spending to $228.5 million.

General Motors TV ad spending decreased 5 percent in 1985 to $227.9 million.

In 1984, GM led the pack with $240.4 million. Ford spent $200.7 million that year, according to BAR.

Dealer associations television advertising only on spot television.

TV ad monitoring draws flak, competition

By Edward Lapham
Marketing Editor

The controversy surrounding the reporting of automotive television ad spending has come to a head. As a result, Broadcast Advertisers Reports, Inc., New York, which compiles the data, is changing its methodology.

Meanwhile, A.C. Nielsen Co. will introduce its own monitoring service, Monitor Plus, on Jan. 1, 1987. Nielsen claims its service will have a 97-percent level of accuracy.

Most of the current complaints—from dealer groups and their ad agencies—were that the Broadcast Advertisers' figures for ad associations were understated.

Those complaints surfaced after Automotive News published the BAR nine-month spending statistics on January 13.

As previously reported, some of the ad agencies believed BAR's method of monitoring understates dealer group spending because it can randomly miss major expenditures.

However, none of the agencies that complained were willing to provide "accurate" figures based on their own records.

BAR's description of its BARCUME monitoring service report says it is based on monitoring of 309 television stations in 75 top U.S. markets. "The New York, Los Angeles and Chicago markets are monitored off-the-air every day of the year via stop-motion video tape recordings," BAR said.

"The other 72 markets are monitored off-the-air for one random week during every calendar month via audio magnetic tape recordings. The BARCUME contains information concerning spot commercial activity only and does not include network announcements."

The lack of full-time monitoring in 72 markets "means some spot TV campaigns can be missed entirely," one critic told Automotive News.

Nielsen's Monitor Plus will monitor the same 75 markets as BAR, but will do so on a four-out-of-four week per month (full-time) basis, according to David Buckley, Monitor Plus marketing manager.

Buckley said the service will be "primarily video" but will include some audio.

He conceded the auto dealer ad association category is difficult because of the way taglines are added.

He said the longer the tag, the higher the level of confidence, up to close to 100 percent for a six- or seven-second tag.

"For example," he said, "If there is a Chrysler-Plymouth association ad with just a three-second tag, we may miss it."

BAR last week acknowledged that current BARCUME procedures tend to understate dealer ad group expenditures.

However, Pro Sherman, BAR executive vice president, denied the problem has anything to do with the amount of time monitored. "It is the methodology," he said.

Sherman said that because BAR has used only audio monitoring in 73 markets, it is difficult to identify a spot as an association ad if it does not use an audio tagline.

The problem, of course, has been exacerbated by the proliferation of regional association spots which are derived from national creative, or are variations on a factory theme produced for ad groups by the manufacturer's national agency.

Citroen plans to return to U.S., but hasn't set a date

By Richard Feast
European Editor

RENNES, France.—Citroen has decided to return to the U.S. market, according to Xavier Karcher, the company's director general.

He said the go-ahead was given about 18 months ago, but he added that the introduction date remains "some time in the future."

Citroen is attracted by the 600,000-unit luxury-car market in the U.S. Karcher said that successful retailers in that segment have one thing in common—they offer conventional three-box sedans rather than the fastback two-box styling, which is the hallmark of current Citroens.

Thus, to compete effectively in the U.S., Citroen's replacement for the present CX (introduced in 1975) is expected in either 1988 or 1989. It will have many design features in common with the new-generation large car from Peugeot, Citroen's sister company.

But while the Peugeot will feature rear-wheel-drive, the Citroen will favor the front-drive layout that the company pioneered in the 1930s.

It is not known whether the Peugeot or the Citroen will be introduced first. However, it will almost certainly be 12 to 18 months after the European introduction before either appears in the U.S. Thus it will be 1989 or 1990 before either crosses the Atlantic.

On a visit to the Citroen BX factory here, Karcher said that no decisions have been made on distribution methods in the U.S. If the company decides to use the facilities of Peugeot Motors of North America, it would take 12 months to establish an operation. If Citroen decides to go it alone, it will take two years.

Karcher said that although the mid-range BX model was engineered to meet U.S. regulations, Citroen never seriously considered a launch there because of the car's hatchback styling.

Citroen has been a member of the Peugeot group (PSA) since the end of the 1970s. Last year, Citroen produced 597,600 vehicles, compared with 551,500 in 1984.

Its sales in France increased 10.2 percent to 296,800 for a market share of around 14 percent. Exports to its 12 major European markets rose 13 percent to 277,000.

Citroen's main commercial successes were with the BX series and the C15 light van derived from the Visa model. This year, each will be under renewed attack from two new Renault products, the R21 sedan and Express light van.

Despite that, Karcher believes the company can maintain—and even improve—its market share.

It will be aided by the a new small car generally referred to as AX, which will be introduced at this fall's Paris auto show. It will not replace the venerable 2CV, Karcher said. The new model will go into production this summer at the Aulnay plant north of Paris.

The re-equipment of Aulnay and the introduction of the AX into the Spanish plant at Vigo later this year form a large part of Citroen's biggest-ever investment program. It amounts to $1.25 billion for 1985-86.

A great deal of money also has been invested in improving Citroen's production quality.

Financially, Citroen remains the weak link in PSA, though Karcher predicted that that the company will break even this year. Since 1980, it has piled up annual deficits totaling 3.95 billion francs, but a 1984 subvention of 1.4 billion francs from PSA reduced that to 2.55 billion francs ($370 million).

Paying the interest charges on that debt accounts for 4 percent of Citroen's annual turnover, a company executive revealed. Last year's sales were $4.7 billion, an increase of about 15 percent over the previous year.

Yugo sues Toyota, claims dealer threats

By John A. Russell
New York Staff Writer

Yugo America, Inc., filed suit against Toyota Motor Sales in federal court in Los Angeles last week, charging Toyota threatened and coerced two Yugo-Toyota dealers into terminating their relationships with Yugo.

Yugo is seeking monetary damages as well as permanent injunctions to halt the alleged practices of Toyota.

Toyota Motor Sales denied all the charges and said it will attempt to have the complaint dismissed.

Yugo also is charging Toyota Motor Sales and its senior vice president, Robert McCurry, and Toyota Motors Distributors, the Toyota-owned distribution operation, with violations under the federal Racketeering Influenced and Corrupt Organization (RICO) Act.

Its suit also charges the defendants with interfering with commerce and extortion; use of travel in interstate commerce in aid of racketeering activity, and multiple violations of California extortion laws.

William Prior, president of Yugo America, told Automotive News, "This action is necessary. Our claims allege what we believe to be substantail evidence that Toyota and its senior officials have been using coercion, intimidation, extortion and intentional interference to force Toyota dealers who are also Yugo dealers —and Yugo dealer candidates who are considering becoming Yugo dealers in the same facility with the Toyota brand—to surrender their interest in Yugo."

In a prepared statement, a Toyota Motor Sales spokesman said, "Toyota denies engaging in any of the alleged illegal activities stated in Yugo's complaint and considers these complaints totally without merit. We will take all appropriate legal action to have this complaint dismissed."

Toyota has until April 9 to respond to the suit. The spokesman said the company will seek immediate dismissal of the RICO allegations.

The suit centers on two California dealerships, Almaden Toyota, Inc., San Jose, and Irvine Toyota, Inc., Irvine.

Yugo alleges that in January, 1986, McCurry and other unnamed individuals threatened to take a number of actions against both dealerships.

The threats allegedly included: Canceling their Toyota franchises; failing to provide monthly allotments of Toyota cars to the dealerships; failing to pay warranty-work vouchers to the dealerships, and refusing to consider future applications for other Toyota franchises.

Both dealerships have the same owner, the Cerrito Management Co., San Jose, operated by Salvatore Cerrito, his two brothers and a brother-in-law. Neither the company nor the owners were named as parties in the suit.

Cerrito could not be reached for comment.

Yugo alleges in the complaint that McCurry and the others Toyota officials' "sole intent in taking or threatening" the actions was to coerce the two dealerships into severing business relationships with Yugo.

Yugo stated the two dealerships terminated their Yugo franchise agreements and requested they be reimbursed for money paid to Yugo. They also sought cancellation of the letters of credit that secured orders for Yugo cars. Yugo said it reimbursed the dealerships and cancelled the letters of credit.

A New York dealership, designated in the court papers only as "XYZ Toyota," was offered unexpected increases in its monthly allocations of Toyota cars if it would severe relationships with Yugo America, Yugo charges.

This dealership refused to drop its Yugo franchise. Yugo refused to name the dealership in court papers because of "fear of retribution" to the dealership.

Yugo claims the two California dealerships placed irrevocable orders for 100 Yugos, supported by irrevocable letters of credit amounting to $400,000 for each dealerships, and that there were 150 orders for the cars secured by a $600,000 line of credit.

They aso made payments of $42,650 each for promoting, selling and servicing the cars.

Yugo claims it lost the opportunity to sell substantial numbers of cars in the San Francisco and Los Angeles regions as a result of the alleged Toyota actions.

The company is asking for compensatory damages in "excess of $10,000" and punitive damages to be assessed by the jury.

Ford reorganizes truck group

DEARBORN.—Ford Truck Operations reorganized its light-truck product development office to combine product planning and advanced engineering functions along product lines.

Daniel L. Rivard

Daniel Rivard, previously light-truck product development manager, became executive director of Ford Truck Operations' light-truck development office.

James Englehart was named director of business planning and vehicle engineering, reporting to Rivard. Englehart had been chief engineer for light truck engineering.

Reporting to Englehart are three program directors responsible for planning and developing Ford light-truck platforms.

They are **Raymond Pittman**, Ranger/Bronco; **Fred Parrill**, F-Series pickups/Bronco and **David Cooper**, vans.

Pittman previously was manager of the light-truck powertrain planning department; Parrill was executive engineer, light-truck body and chassis engineering, and Cooper was manager of the light-truck vehicle engineering and program control department.

Also, **Gerald J. Kuchera**, previously executive engineer, light-truck services engineering, was named engineer for service engineering.

David Guertin, formerly executive engineer, light-truck powertrain engineering, was appointed chief engineer, powertrain engineering.

Charles White, previously manager of light-truck transmission and clutch design and development department, became chief engineer, chassis engineering.

Kuchera, Guertin and White report to Rivard.

The Case of
The Monroe Mendelsohn Doctrine

Clue:
One publication, according to Monroe Mendelsohn, reaches more than one of every five adults in $50,000+ households.

Clue:
That publication reaches more affluent consumers than two newsweeklies and only slightly less than a third.

Clue:
The same magazine reaches affluent households more efficiently than any newsweekly. By far.

Whodunnit?

Auctions mean big action in Britain

By Richard Feast

British Car Auctions' new $15.5 million operation opens next week at Blackbushe airfield, 30 miles southwest of London.

It's BCA's biggest undertaking in the United Kingdom in 40 years, since the time founder David Wickens rented a farmer's field to auction his own and a few other cars. Today the company claims to be the world leader in the auto auction business.

While its early growth was in the U.K., BCA traveled to the U.S. to expand in the early 1980s. Anglo American Auto Auctions (AAAA), owned by BCA through Sandgate Corp., now operates 12 sites.

BCA's biggest investment (artist's rendering, above) is due to open next week.

While the U.S. generates nearly 70 percent of BCA's annual revenues (1.5 billion pounds/ $2.15 billion in 1985), it's been suggested the American operation is too costly and provides too little in return. But AAAA president Mike Richardson says, "If we could have just one or two ounces of luck, I could demonstrate how profitable the U.S. could be."

Although company officials see BCA as an integral part of the automobile business, Tom Gibson, managing director of the British subsidiary, acknowledges that many car retailers perceive auctions as a competitive threat. That might be traced back to the cavalier business tactics of some early postwar auction operators.

Gibson admits, "The public perception of auctions is that they are the last resort to knock out the scrap that can't be got rid of any other way. That perception is totally wrong. It may have been accurate 30 years ago. It may be accurate to greater or lesser degrees at some smaller auctions today. But it is not indicative of the auction industry."

Chairman David Wickins and his brother John, a senior director, held their first auction in February 1946 in a field rented from a Farnborough farmer for one pound a week. They sold 14 cars and took in 8,250 pounds.

Last year some 500,000 vehicles were sold at 15 BCA auction sites in the U.K. Proceeds in the 12 months to Aug. 2, 1985 were 507 million pounds, equivalent today to about $750 million.

Next week's Blackbushe opening will be a major event. The former World War II airfield replaces a location six miles away where BCA was founded. BCA is developing a 45-acre parcel at Blackbushe, where private flying will continue. When fully operational it will include 185,000 sq.-ft. of covered space for auction halls, offices, catering and services. According to Richardson, it will mirror AAAA's facilities at Nashville.

At Blackbushe BCA will also run a thriving open-air Sunday market, the largest in the U.K. The space will be used for parking during the week.

BCA rejects notions that it will consolidate once Blackbushe is fully under way. Gibson asserts, "We don't build Blackbushe and stop. We go on expanding to meet the demands of the industry. The auction industry is still relatively small compared with the overall vehicle industry. There's a considerable number of dealers, particularly franchise holders, who don't use auctions. They haven't acquired the auction habit. But it's notable that successful dealers make use of auctions. There's a lesson to be learned for those who are not so successful."

Noting that European car-production overcapacity and a more regular flow of output from previously strike-torn U.K. factories have led to a major discounting war among new-car retailers, Gibson says, "The only two things the franchise dealer has left under his control is body and paint (work), and used vehicles. No one determines his mark-up on used vehicles, so they must become a bigger part of the overall operation. In that context, auctions play a very beneficial role in helping them acquire stock and keep abreast of what's going on in the market."

BCA estimates that less than 25 percent of those who buy at auctions are franchised new-car dealers, indicating their great potential as auction customers. That's the reason for creating super-sites like Blackbushe with proper valeting, reconditioning areas, customer facilities and great numbers of vehicles offered.

Among sellers at BCA auctions, around half are in the motor trade. The rest are split between fleet operators (25 percent), rental companies, finance-house repossessions, leasing firms and vehicle manufacturers.

Gibson says, "The manufacturers are making very clever strategic use of auctions to dispose of fleet and company-car programs." That began in 1981 when BCA persuaded Ford to let it resell by auction the company cars that previously were sold by tender to Ford dealers.

"That was a major breakthrough," says Richardson, who ran the U.K. business until he was dispatched to set up the U.S. operation. "That was an enormous step up for us, not only because we had access to that very lovely used product — the best on the U.K. market — but it gave auctions the prestige they deserved. We were then visible. And we improved prices Ford had been getting by other disposal means. Ford didn't believe that was possible, but we did it." The U.K.'s other major auto retailers, Vauxhall and Austin Rover, later followed suit.

Besides landing the manufacturers' business, BCA increased its action with local and other government institutions.

"The success rate with those was even greater," Richardson says. "We might have improved manufacturers' prices by 5 or 10 percent, but we improved on local authorities' rubbish by hundreds of percent. In a period of 18 months, in the late 1970s and early '80s, we converted something like 50 percent of the local authorities in this country to selling their surplus through auctions. Prior to that they hadn't done it at all."

BCA's customers today include police forces, the post office, the Ministry of Defense and other government departments.

Gibson estimates BCA's U.K. revenues could reach a billion pounds by the end of the decade — double today's level. Richardson is equally bullish about the potential for AAAA, whose sales were $1.04 billion in 1985 and are projected at $1.8 billion this year. ■

West German car production tops 4 million units

By Richard Feast

Plant investments in the West German auto industry this year will top 1985's "proud" total of 10 billion deutschemark, forecasts Hans-Erdmann Schoenbeck, chairman of VDA, West Germany's automobile industry association.

The 1985 figure, the equivalent today of nearly $4.5 billion, was one-fifth higher than 1984's and well above previous record year 1982 (DM 9.3 billion). "We are expecting an additional increase in investment for the current year," Schoenbeck says.

In reviewing 1985, he notes the country's auto industry achieved revenues of DM 147.5 billion ($65.9 billion), 15 percent above 1984.

"The major influences behind this growth came from abroad," reports Schoenbeck. "Turnover abroad went up 19 percent to DM 78.54 billion ($35.1 billion), compared with increased turnover of 12 percent in mechanical engineering, 12 percent in the electronics industry and 7 percent in the chemicals industry."

Last year was characterized by slow domestic demand for passenger cars in the first half of the year and a continuing slump in heavy commercial-vehicle sales. But with car exports climbing 15 percent, the industry was able to compensate for that and even managed a production increase.

West German passenger car production topped 4 million units for the first time in 1985, totaling just under 4.17 million, 9.9 percent more than in 1984. There was similar improvement in output of vans, trucks and buses (up 9.4 percent to just over 279,000), but it was mostly attributable to light-vehicle categories.

VDA cautions against too-close comparison between 1985 and 1984. In 1984 a six-week metal-workers strike cost the West German auto industry around 427,000 units. While about a third of that loss was later recovered through holiday work and extra shifts, 1984's total was 2.6 percent below 1983's. To some extent 1985's production improvement came from making up for ground lost in 1984.

About 20 percent (more than 839,000 units) of last year's West German passenger car and station wagon production was diesel-powered. That was 31 percent above 1984 and topped 1982's previous diesel mark by 110,000 units.

Car imports went up in West Germany last year. Led by the Japanese, the import market share climbed from 26.7 to 27.2 percent. Including the West German industry's captive imports — made in Spain by Ford, General Motors and VW/Seat — one-third of all new-car registrations in the country were imports in 1985.

The West German industry's exports in 1985 rose nearly 15 percent to more than 2.74 million units, or nearly 62 percent of total production. Exports to the U.S. increased by one-fifth to 440,000.

Western Europe accounted for 75 percent of West Germany's automotive exports, 19 percent went to North America and 6 percent to the rest of the world.

At the end of 1985 West Germany's motor vehicle industry employed 700,000 people, 20,000 more than a year earlier. ■

Consumer confidence dips; car-buying attitudes near peak

NEW YORK.—The Conference Board reported that consumer confidence throughout the U.S. fell slightly in the final month of 1985.

Nevertheless, favorable attitudes toward vehicle purchases were held by 65 percent of all families queried in the University of Michigan's fourth-quarter Survey of Consumer Attitudes.

That was just below the all-time peak of 67 percent recorded both one and two quarters earlier and was significantly above the year-earlier reading of 55 percent.

The Conference Board's monthly survey—which covers 5,000 U.S. families—is conducted for the board by National Family Opinion, Inc., based in Toledo.

The board's Confidence Index (1969-1970100) closed out 1985 at 86, down from 91.5 in November.

When consumers in the University of Michigan survey were asked to explain their views about vehicle buying, most replies focused on discounts on interest rates and prices, according to the U-M Institute for Social Research.

Generally speaking, fourth-quarter consumer spending in 1986 will be "good rather than expansive," the institute said.

The institute's director, Richard T. Curtin, said that the outlook for consumer spending during 1986 will remain favorable, but the rate of growth in spending will be reduced.

"Discounts on prices and interest rates became the expected norm by 1986," he said, "and any absence of discounts is now viewed as temporary, and therefore a cause for postponement of purchases.

"As a consequence, the evolving pace of sales will not only be slower, but also uneven, depending on the availability of discounts," Curtin said.

The U of M survey found that the financial situation of American families changed very little during 1985, when nearly 42 percent of families reported improvement in their financial situation, as compared with 45 percent in 1984.

About 34 percent said they expected to be better off financially in the year ahead, just below the 38 percent recorded a year earlier.

Similarly, according to The Conference Board, despite the December dip in the Confidence Index, overall confidence is holding at year-ago levels.

Consumers are, however, a bit less confident about current and future economic conditions. Fewer than 19 percent expected business conditions to improve during the next six months, down from over 21 percent in November.

The Conference Board said that the moderate decline in confidence in December did not carry over into buying plans. Some 9.6 percent of surveyed households planned to buy an automobile (new or used) during the next six months, up fractionally from 9.3 percent in November.

Some 3.7 percent planned to buy a house, compared with 3.9 percent in the previous survey.

Vacation plans, which are seasonally adjusted and compiled every other month, declined slightly to 44.5 percent, down from 49.2 percent in November.

Marine Midland courting dealers

NEW YORK.—Marine Midland Bank has opened a regional office in Pittsburgh to offer a full range of auto-related financial services to auto dealers in Western Pennsylvania and parts of Ohio.

Marine Midland will offer dealerships inventory financing, retail auto loans and other specialized dealer-oriented financial services. The Pittsburgh office is a subsidiary of Marine Midland Consumer Credit Corp., Marine Midland's auto-related financial services company.

Marine Midland claims to be the largest bank financer of autos in the Northeast, serving more than 1,500 dealers, mostly in New York, California and New England.

AUTO-MOBILITY

Missouri's Big Three auto plants—Chrysler, Ford and General Motors—produce more cars than anywhere outside Detroit. And in production growth, we lead the nation.

Our central location and outstanding transportation system are major reasons Missouri's auto industry is thriving. We're a natural crossroads for America, and shipping to and from Missouri is fast and efficient.

Add to that our ranking as the country's number one pro-business state, and you'll know why automobility is part of the Missouri Advantage™.

To find out how to make that advantage yours, just call us at (314) 751-4539. Call collect.

The Missouri Advantage™

Import registrations top 3 million

By Jenny L. King
Detroit Reporter

Registrations of new imported cars soared to a record in 1985 and captured 27.65 percent of the total U.S. new-car market.

Japanese-built autos accounted for 71.13 percent of the import segment, down from 72.11 percent a year earlier.

The import penetration record was notched in 1982 when they claimed 29.26 percent of the total.

December import registrations did achieve record penetration, catapulting to 34.62 percent from 27.11 percent of the total a year earlier.

According to figures compiled by R.L. Polk & Co., import registrations totaled 3,011,132 in 1985, up 19.30 percent from 2,523,973 a year earlier. Penetration expanded to 27.65 percent from 24.92 percent.

Nissan improved its share of the market by only 0.25 percentage points but managed to climb over Honda and Toyota to become the top import in 1985. Nissan figures, however, include both imported and U.S.-built cars, as do Honda figures.

Toyota dropped 0.89 percentage points during the 1985 calendar year and slipped into second place. Honda, down 1.17 percentage points, was third.

Mazda, Volkswagen (domestics and imports), Subaru and Volvo remained ranked as they had been in 1984. BMW moved up into eighth place, pushing Mercedes-Benz into ninth and Audi into tenth among the top 10 imports. "Others" accounted for 12.85 percent of the year's total, up from 10.67 percent a year earlier.

The December import penetration record was due to a 30.17-percent increase in numbers from 1984 to 1985. Registrations rose to a record 293,984 from 225,853 and gained 7.51 percentage points in share of the overall import market. Nissan was on top of the heap, moving into first place from third and gaining 0.51 percentage points.

December import registrations were 71.89-percent Japanese-sourced. Another 12.95 percent were imported from West Germany, and 8.35 percent were what Polk calls U.S.-built imports (Nissan, Honda, Volkswagen). The numbers from each country of origin with comparable figures from 1984 follow:

	Dec., 1875	Dec., 1984
Japan	211,334	163,156
W. Germany	38,074	30,660
United States	24,559	16,047
Sweden	13,448	10,665
Great Britain	2,654	1,866
Yugoslavia	1,719	0
France	1,606	2,825
Italy	590	620
Ireland	0	14
TOTAL	293,984	225,853

In the 1985 calendar year, 71.13 percent of the new imports registered were Japanese, 13.62 percent were West German and 8.48 percent were assembled in the U.S. Totals from each country included:

	12 Mos., 1985	12 Mos., 1984
Japan	2,141,899	1,820,148
W. Germany	410,167	315,894
United States	255,458	201,487
Sweden	147,729	129,334
France	24,154	31,590
Great Britain	21,113	18,078
Italy	7,398	7,093
Yugoslavia	3,214	0
Ireland	0	350
TOTAL	3,011,132	2,523,974

Registrations of new imported light trucks were up 13.66 percent in December. Registrations climbed to 79,686 from 70,108 a year earlier. The breakout:

	Dec., 1985	Dec., 1984
Toyota	32,010	27,214
Nissan	16,689	17,852
Mazda	10,027	9,333
Isuzu	7,533	6,191
Others	13,427	9,518
TOTAL	79,686	70,108

Light-truck registrations for the calendar year, up 28.01 percent, numbered 952,926 compared with 744,404 in 1984. Totals from the major makers included:

	12 Mos., 1985	12 Mos., 1984
Toyota	366,205	288,995
Nissan	256,313	194,513
Mazda	114,585	115,303
Isuzu	76,522	42,664
Dodge Ram 50	—	49,855
Others	139,301	53,074
TOTAL	952,926	744,404

Sun Belt holds lion's share of multi-point deals

WESTLAKE VILLAGE, Calif.—The trend toward fewer new-car dealers owning more outlets appears to follow population-shift trends and seems to be occurring more frequently in the Sun Belt, according to The Power Report.

Dealers owning three or more retail locations represent 7 percent of the dealer body but account for more than 22 percent of all retail outlets nationally, according to data from the J.D. Power & Associates 1985 Dealer Attitude Survey.

Dealer principals owning three or more outlets are concentrated (65 percent) in eight states. The highest concentration is in the three largest Sun Belt states, where recent population growth has been most dramatic, Power said.

Leading states with dealer principals operating three or more locations, and each state's percentage share of the total, are: Texas, 13.6 percent; Florida, 10.2 percent; California, 9.5 percent; Pennsylvania, 9.1 percent; Illinois, 7.1 percent; Ohio, 5.6 percent; Michigan, 5.0 percent, and Tennessee, 4.7 percent.

Limousine operator buys by the truckload

ROCHESTER, Mich.—Carey/Ambassador Limousine Service recently took delivery of a truckload of new Lincoln stretched limousines.

Carey/Ambassador is the Michigan affiliate of Carey International, which maintains a fleet of limousines serving 200 cities in 55 countries on five continents.

Approximately 500 will be built in the 1986 model run.

Dealer told to pay $2,000 for forging loan papers

BRIDGEPORT, Conn.—Branhaven Motors (Chrysler-Plymouth), Inc., East Haven, has been ordered by a federal judge here to pay an East Haven couple $2,000 for "emotional trauma and unnecessary aggravation" after finding that it had forged their signatures on loan papers.

In addition, U.S. District Court Judge T.F. Gilroy Daly ordered the dealership to pay Anthony J. Iuteri Jr. and his wife, Adrianne, $961.60 for violating the U.S. Truth in Lending Act and also to pay the couple's legal fees.

Daly's decision said that the forged documents had called for higher loan payments than agreed to by the couple.

The Iuteris brought suit against Branhaven Motors in 1981 following purchase of a used car.

Judge Daly said that the couple had signed a contract for 12 monthly payments of $86.70 to Chrysler Credit Corp., but was sent a payment booklet requiring 12 monthly payments of $186.70. He added that the Iuteris were shown a contract for the higher payments bearing their forged signatures.

Judge Daly rejected claims by Branhaven Motors to the effect that the dealership had not violated the Truth in Lending Act because it never signed the document calling for lower payments and because it later rescinded the purchase agreement.

Dealers set up scholarship plan in Pittsburgh

PITTSBURGH.—The Pittsburgh Automobile Trade Assn. is launching an annual college scholarship awards program.

Scholarship awards totaling $9,000 will be presented to three graduating high school seniors taking part in an essay contest sponsored through their local high school English classes.

Theme of the essay is, "Why an automobile dealer is important to our community."

In developing the essay, the students are asked to consider the auto dealer's impact on their community in terms of interaction with the community's civic and charitable activities, as well as the dealer's impact on the economy through employment and taxes.

Winners will be announced at PATA's annual dinner meeting on May 7.

Anglo American staging Detroit heavy-truck sales

BLOOMFIELD HILLS, Mich.—Anglo American Auto Auctions, Inc., has opened an auction in the Detroit area exclusively for the sale of heavy trucks, trailers and equipment.

Located on Eureka Road in Taylor, Detroit Heavy Commercial Vehicle Auction plans sales the second Wednesday of every month. A fixed sale fee is charged, and reserves may be set with an entry fee in the case of a no-sale, according to Anglo American.

Production

Auto output climbs to 178,455

By Kathy Boyer
Detroit Reporter

Domestic auto output was estimated at 178,455 last week, 3.54 percent more than the previous week's 172,348 and 3.68 percent better than the year-ago week's 172,116.

So far this year, according to unadjusted figures, 1,986,709 cars have been assembled, 0.45 percent below the 1,995,626 completed last year at this point.

Companies split last week's estimated production as follows: General Motors, 54.40 percent; Ford Motor Co., 22.78 percent; Chrysler Corp., 15.80 percent; Honda of America Mfg. Co., 1.89 percent; New United Motor Mfg., Inc., 1.82 percent; American Motors, 1.15 percent; Volkswagen of America, 1.12 percent, and Nissan Motor Mfg. Co., U.S.A., 1.04 percent.

As previously reported, production of the Chevrolet Chevette at GM's Lakewood (Ga.) plant has been suspended this week to adjust inventories. Assembly is expected to resume Monday (March 31).

GM scheduled no overtime Saturday (March 22).

Saturday overtime was slated at Ford's Wayne and Wixom (Mich.) plants.

Chrysler scheduled overtime Saturday its Jefferson Avenue (Detroit) plant.

Daily overtime is slated this week (March 24) for Chrysler's Newark, Del., and St. Louis (No. 2) plants.

Taurus/Sable line nears max; 140,000 orders backlogged

By Richard Johnson
Detroit Reporter

CHICAGO.—Taurus/Sable production at Ford Motor Co.'s Chicago assembly plant could reach full capacity this week, helping dealers keep up with a large sales backlog.

Supply continues to lag behind demand for the hot new intermediates, which Ford introduced in December. The company last week reported that the daily sales rate has increased from 352 in early January to 961 in early March.

Ford has 140,000 wholesale and retail orders for Taurus and Sable models that have not yet been built.

Late last week, the hourly line rate at Chicago had risen to 58. Plant manager Joe Bobnar said the scheduled production rate of 63 cars per hour could be achieved late this week, although no firm target date has been set.

Combined with output at Ford's Atlanta assembly plant, Chicago's contribution will bring production to an annual rate of 500,000. Atlanta began Taurus/Sable production last October and is also nearing the scheduled line rate of 63 per hour.

Louis Ross, executive vice president—Ford North American Automotive Operations, said allout production at Chicago will help the company meet "overwhelming demand" for the cars.

Ford executives expect demand to exceed supply for most of the year. As of March 1, the Taurus inventory was sufficient for 41 days, and the Sable inventory was 43 days. A 60-day supply of cars is considered optimum.

The scheduled hourly line rate is 18 percent higher than Ford maintained on its LTD line before the Chicago plant was modernized for Taurus/Sable late last year. Previous capacity at Chicago was 53 units per hour, or 209,000 vehicles annually. Since the plant was converted, employment at Chicago has increased from 2,750 to 3,000.

During brief remarks at the plant last week, Ross emphasized new high-tech manufacturing processes at the showcase Chicago plant and also cited new efficiencies in the car-development stages.

Since 1979, he said, Ford has cut its total engineering expenses by 28 percent and is aiming at improving "overall engineering productivity" by 8 percent a year through 1988.

He said engineering productivity gains are being achieved in large part through computerization. By 1988, he said, 60 percent of powertrain engineering, 65 percent of body engineering and 80 percent of chassis engineering will be handled by computer graphics.

Ford's car engineering offices are expected to be stocked with more than 5,000 microcomputers and word-processing work stations by the end of the decade.

AMC sets price of Jeep Wrangler

Prices of American Motors' new Jeep Wrangler will start at $9,899 for the base soft-top model. Also available are the Sport Decor at $10,620 and the Laredo hard top at $12,205.

Destination charges are $391, the same as for the Jeep Cherokee and Wagoneer series.

AMC is projecting that more than 50 percent of Wrangler buyers will choose the Sport Decor or Laredo models.

The Wrangler replaces the CJ-7 in the Jeep lineup. It goes on sale May 12.

Truck production near year's high

Last week's scheduled production of 75,750 trucks was just 0.41 percent—or 309 units—below the previous week's 76,059, which was the weekly high for the year.

The prior week's output was the highest since the week ended Dec. 14, when 83,892 units were assembled.

Last week's build was 9.35 percent more than the year-ago week's 69,270.

Year-to-date, 825,428 trucks have been assembled, 5.91 percent more than the 779,402 built last year at this time.

General Motors slated Saturday (March 22) overtime at the following plants: Janesville, Wis.; Flint (Nos. 1 and 2); and Moraine, Ohio, and Detroit.

Ford scheduled Saturday overtime at its Twin Cities and St. Louis plants.

Canadian output 8 pct. above '85

Canadian makers scheduled assembly of 25,672 cars last week, 6.01 percent more than the previous week's 24,217 and 23.63 percent more than the year-ago week's 20,766.

So far this year, 250,079 cars have been built, 8.08 percent ahead of the 231,393 completed last year at this time.

Truck makers pegged production at 19,641 units last week, down 1.70 percent from the previous week's 19,980, which was the highest build of any week so far this year.

Last week's output was 5.57 percent more than the year-ago week's 18,605.

So far this year, 217,416 trucks have been assembled, 4.21 percent more than the 208,637 built last year at this point.

60th year—$50.00 per year, $1.25 per copy

27.5-MPG rule could cost billions, FTC says

By Helen Kahn
Washington Bureau Chief

WASHINGTON—The 27.5 MPG passenger-car CAFE standard could cost consumers and producers $3 billion to $3.5 billion in the short run and result in the loss of 130,000 jobs, according to an FTC study.

But, the study added, over time, General Motors and Ford Motor Co. might devise less costly means to meet the more stringent standard.

They may find other ways than cutting production and raising prices of large cars and upping production and reducing prices of small cars.

In the long term, if the auto makers build cars to meet the more stringent standard, the costs to consumers and producers "may abate but may not disappear," the study said.

Because the short-term effects could be severe, the FTC staff and the Commerce Department separately told NHTSA that CAFE standards should be lowered to 26 MPG for the 1987 and 1988 model years. In expressing that view, FTC and Commerce joined GM, Ford and virtually every maker except Chrysler Corp.

The standard is 26 MPG for the 1986 model year, but it will go back to 27.5 MPG for 1987 unless NHTSA acts.

The study concluded that: "Overall, the deadweight loss to consumers and producers and the output losses caused by the temporary unemployment generated by the higher CAFE standard would range between a low of $3.0 billion and a high of $3.5 billion."

Dead-weight loss means the "consumer loss not captured by domestic producers in the form of higher profits." The dead-

GM calls in troops on CAFE

General Motors last week sent letters to 200,000 shareholders, employes and retirees, asking them to write their congressmen and DOT in support of an eased 1987-88 CAFE standard. The cost to GM was an estimated $200,000.

Each hand-stamped letter had an inside address and personal salutation and listed the name and address of the recipient's U.S. senators and representative.

In the letter, GM said that unless CAFE relief is granted, it may have to drop production of many of its larger cars, at a cost of U.S. jobs.

Dealerships for imports at peak level

By Edward Lapham
Marketing Editor

There were 17,966 dealerships selling imported cars at the end of 1985, the highest total ever, according to the annual Automotive News census.

The 17,966 imported outlets on Jan. 1 surpassed the old record of 17,700 on Jan. 1, 1978, when Volkswagen and Renault were still included in the import dealer outlet category.

On Jan. 1 1985, there were 12,427 dealerships selling imports, and on July 1, 1985 there were 15,576 import outlets.

The big jump last year came in the captive-import segment, as all 5,050 Chevrolet dealers got Sprint and Spectrum, compared with just 1,561 a year earlier. Also in 1985, some 783 Lincoln-Mercury dealers took on the German-built Merkur.

The import census figures do not reflect Acura or Hyundai dealers, since those cars were not on sale in the U.S. at the beginning of the year.

Ironically, the big jump in the number of import dealers comes at a time when both the Japanese yen and West German D-mark are strengthening against the dollar on world money mar-

AMC President Joseph E. Cappy

Next AMC model could be a Jeep

By Richard Johnson
Detroit Reporter

American Motors' Alliance and Encore, which are scheduled to be dropped after the 1989 model year, could be replaced by a new Jeep model rather than another passenger car.

AMC's new President and Chief Executive Officer Joseph E. Cappy made the statement in an interview with Automotive News, indicating the product decision would come before AMC decided where to build its new assembly plant.

Indeed, the location of a new plant to replace the outdated Kenosha facility that now turns out Alliance and Encore and the Toledo Jeep plant appears

Chrysler delays new tech center

By Mary Connelly
Detroit Reporter

Chrysler Corp.'s plan to build a $500 million technical center in the Detroit area and boost its developmental capabilities is being delayed until the company receives guarantees that $100 million in road improvements will be made in the area.

Groundbreaking, tentatively planned for this spring, has been postponed until the road issue is resolved by state, county and local governments.

"Groundbreaking may be later in the summer. It depends how long this takes," said Michael Glusac, Chrysler's government affairs director. Chrysler also has refused to hire a project contractor until receiving financing commitments for road improvements.

Chrysler plans to spend $500 million to build a technical center, wind tunnel and small test track on a 500-acre site in Oakland County, north of its headquarters in Highland Park, Mich.

When unveiled to local zoning officials, the project included three million square feet of office and laboratory space. However, Glusac said Chrysler is planning to build only 1.0 million to 1.5 million square feet in the initial construction phase and that no planning is under way for a second phase.

A related supplier park will require additional space, but the size of the project depends on the outcome of negotiations between Chrysler and a number of suppliers.

Chrysler will employ 2,000 at the tech center initially, with employment expected to reach 6,000 to 8,000, Glusac said. Employment at the Chrysler tech center and supplier park is expected to be 8,000-10,000, but could go higher, depending on the number of suppliers that locate in the park, he said.

The project, which will take 2½ to three years to complete, has fueled speculation that Chrysler will

Rear-drive big cars slipping

By Richard Johnson
Detroit Reporter

Despite a recent plunge in gasoline prices, the long-awaited, long-delayed decline of big American rear-wheel-drive models may finally be at hand.

The standard-sized segment of the U.S. market has shrunk more than 2½ percentage points during the past year and highly profitable, rear-drive stalwarts like the Ford Crown Victoria/Mercury Grand Marquis twins have begun to show signs of age.

The segment took on a new look last November with the addition of its first front-wheel-drive models. General Motors replaced its rear-drive Buick LeSabre and Oldsmobile Delta 88 models with fwd versions. But five of the six rear-drive models remaining in the standard-sized class are running below 1985 sales levels.

Stable gas prices have buoyed full-sized cars during the last 3½ years. Aging, rear-drive platforms have satisfied an appetite among older buyers for big-car ride, room and comfort.

The continuing enthusiasm for those cars has even made it difficult for domestic companies to meet CAFE standards. But recent sales trends suggest that the tide has turned.

Ford sales analyst Ray Windecker said the big rear-drive

Gilmour tells of myths' ending

By Richard Johnson
Detroit Reporter

Corporate culture is "the in thing to talk about," but a top Ford Motor Co. official insists the much-ballyhooed new culture at Ford is no hype.

"We started to change our corporate culture before it became the fashionable thing to do," said Allan Gilmour, Ford executive vice president and chief financial officer, in an address to the Global Blue-Detroit Michigan Business School Alumni.

With laudatory treatments in several major business publications, Ford has become a corporate culture showpiece at a time when the concept is something of a boardroom craze.

At Ford, "culture" has come to mean a more people-oriented, less authoritarian approach to management that emphasizes "quality" in everything from motor vehicle production to memo writing.

"We had to change the outdated rituals, myths and misunderstanding," said Gilmour, who some believe is a future contender for the chairman's position at Ford.

The concept of corporate culture has largely

COMPANY MISSION, VALUES, AND GUIDING PRINCIPLES

MISSION — Ford Motor Company is a worldwide leader in automotive and automotive-related products and services as well as in newer industries such as aerospace, communications, and financial services. Our mission is to improve continually our products and services to meet our customers' needs, allowing us to prosper as a business and to provide a reasonable return for our stakeholders, the owners of our business.

VALUES — How we accomplish our mission is as important as the mission itself. Fundamental to success for the Company are these basic values:

- People — Our people are the source of our strength. They provide our corporate intelligence and determine our reputation and vitality. Involvement and teamwork are our core human values.
- Products — Our products are the end result of our efforts, and they should be the best in serving customers worldwide. As our products are viewed, so are we viewed.
- Profits — Profits are the ultimate measure of how effectively we provide customers with the best products for their needs. Profits are required to survive and grow.

New trial denied in $5-million franchise-loss case

By Matt DeLorenzo
Los Angeles Reporter

LOS ANGELES—Security Pacific Bank lost its bid for a new trial in a case that awarded nearly $5 million to a former San Diego auto dealer who charged that the bank caused him to lose two franchises in 1980.

In addition to denying the bank's request, the court awarded $200,000 in legal fees to the attorney representing Jim Williams, who owned Baron Buick, San Diego and Viking Dodge, North Hollywood.

The original ruling, which was handed down in early January by Judge Dennis Adams, awarded $4.77 million to Williams and found that the bank had "fraudulently induced" Williams to buy the ailing Viking Dodge store, which led to a chain of events that forced the eventual closing of his Baron Buick store.

The award included $2.5 million in punitive damages, nearly $1.7 million in lost income, $300,000 for emotional distress and $274,000 for a judgment granted Chrysler when Viking Dodge closed.

A spokesperson for Security Pacific said the bank intends to appeal.

In a statement issued with the original verdict, the bank maintained that the judgment "is wrong legally and factually. Security Pacific believes it owes nothing to the claimant. The claimant borrowed money from Security Pacific which was not repaid and is indebted to Security Pacific in an amount in excess of $1 million."

Patrick Frega, the attorney who represented Williams, hailed the decision as a landmark ruling for dealers and their relationship with lending institutions. He said that when banks put themselves in the position of advising dealers on their financial matters, "they have a responsibility, they become your partners."

Williams started in partnership with Mike Chesrown, Theo Lamb and Emanual Bugelli at Baron Buick in 1975 when he was 27. He eventually bought out his partners and was successful in his business.

According to the suit, Security Pacific asked him to help turn around Lamb Chevrolet, another San Diego dealership. While there, problems developed at Baron Buick and he returned to Baron in 1979 and restored the dealership to profitability.

Meanwhile, Bugelli, who owned three dealerships in Los Angeles—Universal Ford, Westchester Ford and Viking Dodge—was selling all three dealerships after Universal Ford was rocked by a local TV station's investigation of selling practices there.

According to Adams' decision, J. Robert Ross, a Security Pacific vice president, advised Williams not to buy either of the Ford stores, but steered him toward Viking Dodge. Adams wrote that Ross originally approved Bugelli's acquisition of the Dodge store because Bugelli needed a "dump" for Universal Ford's repossessions and that the bank hid Viking's last two monthly statements, which showed losses, from Williams prior to the sale.

"Viking Dodge was in serious trouble and the bank officials knew it," Adams said in his decision. "Ross knew that Williams was going into the business undercapitalized."

In addition, "the bank required Williams to sign a personal guarantee on the $225,000 capitalization loan assumed by Williams at Viking Dodge . . . Ross wanted Williams to purchase Viking Dodge so that Security Pacific Bank could be released from Viking Dodge's debt."

Viking Dodge closed in February, 1980, and Williams returned to Baron Buick on a fulltime basis.

By 1980, the entire auto industry was feeling the effects of the downturn caused by the increase in oil prices, and Baron Buick began to run into trouble.

Ross was called in to work out the situation with Williams, but the situation was deteriorating, Adams wrote, because of Williams' experience with Viking Dodge.

Williams deposited some money from a weekend sale in another bank and was holding a check from an investor for additional capital until he could get some assurances from Security Pacific that his dealership would not be shut down. Ross ordered Baron Buick closed for selling cars out of trust and the store was forced into involuntary bankruptcy.

Williams said he was blackballed by the industry, was unable to find work at any other dealership in Southern California and ended up tending bar in Sacramento. He eventually returned to the auto business as manager of a dealership in Denver. He returned to Southern California where he now is general manager of Rancho AMC-Jeep-Renault in San Diego.

NADA reports dealers split on factory relations

Many auto dealers are not satisfied with their experience in dealing with their factories, according to the latest NADA Dealer Attitude Survey.

Results of the survey, published in the April issue of NADA's Automotive Executive magazine, highlight "significant differences" in the way dealers view their factory relations. There were more than 7,000 respondents.

The magazine reported that of the various makes, only Cadillac, Alfa Romeo, Peugeot, AMC and Renault dealer-respondents reported that the value of their franchises did not increase during the past 12 months.

All dealer-respondents except Audi, Mazda, Saab, Mercedes-Benz, AMC, Renault and Jeep expressed dissatisfaction with vehicle distribution.

All respondents except Renault, Subaru, Jeep, Porsche and AMC were satisfied with parts distribution.

In the area of fair and even manufacturer application of policies and procedures, only dealer-respondents handling Subaru, AMC, Nissan, Jeep, Renault, Peugeot and Ford expressed doubt about even-handed treatment.

Only Mitsubishi, Saab, Honda, Mazda and Jaguar respondents believed the manufacturer considered dealer input.

NADA began the semi-annual attitude survey in 1984. The next survey, to be mailed in May, will serve as a point of departure for Project 2000, a NADA official said.

Mercedes-Benz disguises SL 4x4

Hidden Image

Disguised only by a fake plastic nose and taillamp obstructions is the 1987 Mercedes-Benz SL sports car, powered by a 5.5-liter aluminum V-8, driving all four wheels. A computer will switch from rear-drive to 4WD according to conditions. Compared to the current model, the new SL has more of a rake, aerodynamic headlights, a higher rear end and virtually no chrome.

NADA is overhauled at upper level

WASHINGTON—A general reorganization of NADA's upper management will be announced today (March 31) as the association gears up to address what it believes will be extremely competitive times in the retail auto and truck business.

Done under the aegis of the "Dealer 2000" project announced by President James Woulfe at this year's NADA convention, the reorganization is aimed at keeping the association at the cutting edge of developments in the retail business. The project is also designed to make NADA an active participant in any decisions or structural changes in the industry that might affect dealer business.

Named executive director for the association's new Convention & Member Services Division was Stephen R. Pitt, who previously headed the Convention and Exposition Division. He will now also be responsible for NADA and American Truck Dealers membership services and meeting planning.

Named executive director for the association's rapidly expanding 20 Group Consultant Programs was William C. Gourley Jr. Gourley, who has headed the 20 Group programs since fall, will now have the added responsibilities of industry statistics and statistical research.

Doris Werber, formerly director of management education, was promoted to executive director for dealership operations. She will have responsibility for training, management education, the Dealer Candidate Academy, regional consulting, consulting services, Automobile Trade Assn. Executives, Washington conference program and consumer affairs.

Bruce Kelleher, currently executive director of administration, takes on the added responsibilities of internal audits, the Dealer Election Action Council, the Human Resources Division, word processing and the administration of NADA's Charitable Foundation and Sanchez Memorial Fund.

Jake Kelderman, currently a Washington reporter for Automotive News, will join NADA April 7 as executive director of the newly created Industry Affairs Division. He will have responsibility for industry analysis, industry relations, ATD and publications. This group will also play a primary role in the association's Project 2000.

An internal communications task force also was established to look at ways NADA can better use its computers with dealers, other associations and data bases. Norman Raymond, executive director of NADA Services Corp., will head that project.

John Winston, NADA corporate secretary, will assume the additional responsibilities of Charitable Foundation development and long-term charities.

Fleet MPG rises to 27.0

By Jake Kelderman
Washington Reporter

WASHINGTON—Despite lower gasoline prices, Americans continued their quest for more-fuel-efficient automobiles in 1985.

The sales-weighted fuel-economy for the entire automobile fleet rose to 27.0 MPG for the 1985 model year, up from 26.3 MPG for the 1984 model-year.

The gain came from the domestic auto fleet, which boosted its sales-weighted average by 0.8 MPG. Imported cars, on the other hand, gave up 0.8 MPG in fuel economy.

The 1985-model-year figures were 26.0 MPG for domestics and 30.5 MPG for imports

Light trucks also boosted their sales-weighted fuel economy, but only by 0.3 MPG. For the 1985 model year, the level was just under 21 MPG. As in the case of the automobile fleet, the domestic truck makers provided all of the boost, raising their level from 18.9 MPG to 19.4 MPG. Imports, on the other hand, saw their sales-weighted average fall 1.8 MPG, to 26.4 MPG.

The Department of Energy, which keeps track of such things, said the average new car sold in the 1985 model-year was a compact with a 178.8-CID engine, a curb weight of 2,747 pounds, a 102.9-inch wheelbase and interior space of 107.8 cubic feet.

Looking at just the domestic fleet, the sales-weighted engine size has dropped to 196.8 cubic inches, continuing a decline that began in 1978 when engines averaged 297.9 cubic inches.

Average engine size in the import fleet, meanwhile, has continued to grow from the 107.1 cubic-inch average in 1978 to 120.6 cubic inches in the 1985 model year.

Sales-weighted curb weight for the domestic fleet in the 1985 model year dropped to 2,845 pounds, 60 pounds less than in the 1984 model year. In 1978, the domestics' sales- weighted average was 3,401 pounds.

But imports continue to fatten up, raising the sales-weighted average curb weight to 2,429 pounds in the 1985 model year. In the 1978 model year, the sales-weighted average was 2,168 pounds.

Seizing the day in the sports-sedan market

Alfa Milano arrives

By John A. Russell
New York Staff Writer

PHOENIX—Alfa Romeo introduced its Milano sports sedan here last week and made no bones about the fact that the new model is essential to the company's growth in the U.S.

Ernesto Vettore, president of Alfa Romeo, Inc., said the sports-sedan market in the U.S. totals 600,000 units a year. He said Alfa Romeo must "seize the opportunity" in that segment since the sports car market has become nearly saturated.

The Milano will be in dealer showrooms by May as a 1987 model.

Alfa expects to sell 6,000 Milanos by the end of this year. Combined with sales of 4,500 sports cars, that would put Alfa Romeo over 10,000 for the first time in the U.S. Vettore said the goal is 25,000 a year by 1990.

While the Milano is based on the Alfa 75 platform, Vettore and Joseph E. Cooley, director of sales and marketing, said this version is entirely different.

The Milano will be equipped with a 150-HP V-6 engine, and three models will be offered in the U.S. Automatic transmission will be available next February in addition to the standard 5-speed gearbox.

Heavy-duty systems for air conditioning, heating, ventilation and defrosting have been incorporated into the North American version, and there will be a full range of options including sunroof, leather interior, audio systems, power windows and power mirrors. An anti-skid braking system will be standard on the top-of-the-line model.

The three Milano models are the Silver Quadrifoglio, Gold Quadrifoglio and Platinum Quadrifoglio.

The Platinum has the complete range of options as standard equipment, including air conditioning, ABS braking system and sunroof.

Thomas Tooley, director of parts and service, said the new models will have a six-year/60,000-mile limited warranty on rust perforation, which is a first for the company.

An Alfa spokesman said a fourth model, with a 185 HP engine, will be introduced in 1987.

Alfa executives noted that this is the beginning of a concerted effort to reach new markets. The Milano will be followed by another, larger front-wheel-drive sedan called Project 164. That will give Alfa complete coverage in the under-$20,000 segment of the sports sedan market.

In addition, new sports-car platforms are being developed.

According to Vettore, Alfa will concentrate on a sub-segment of the sports sedan market —the under-$20,000 category. That class accounts for 400,000 of the 600,000 units sold annually in the U.S., he said.

Cooley said the direct competitors in that category are Audi, Saab, Peugeot and Volvo. He said the Japanese makes, particularly Nissan, Toyota and Honda, also should be included.

Alfa also is taking aim at BMW and Mercedes-Benz in the over-$20,000 range.

Alfa intends to attract customers for the Milano from three different sources. First, Cooley said, the market is expected to grow at a rate of one to 2 percent per year. Conquest sales are expected and, finally, there will be converts from those already owning Alfa sports cars.

Advertising begins in May with full-page ads in the Wall Street Journal. They will be followed by June advertising in enthusiast magazines and in other publications including Smithsonian, Newsweek and Business Week.

Direct mail also will be used. Another tactic being employed by Alfa is direct mail. Through May, a select group of 50,000 persons will receive three postcards inviting them to come in and see the cars.

Also, Cooley said, dioramas are being set up at airports in 10 major markets. They will be used as "teaser" material and should be completed by the end of this week.

Finally, Alfa's new agency, the Bloom Agency, is working on a new campaign. Cooley said Alfa will use 30-second and 45-second radio spots with the tagline "power in the hands of a few."

Trio seized in payroll heist

MEXICO CITY—Three suspects in the payroll robbery at the Chrysler de Mexico Laga Alberto plant here (Automotive News, Feb. 17) were arrested after a spectacular chase along city thoroughfares.

The film-thriller-type chase began after the suspects' car was stopped by police for a traffic violation and shots were exchanged.

A fourth occupant of the car, who is said to have masterminded the Chrysler robbery, escaped and fled down a crowded street.

The disgruntled suspects told police the gang has 15 members and was responsible for robberies in various Mexican states. Police are seeking the other members.

According to those arrested, the Chrysler haul came to more than $264,000.

The arrested gang members complained that the leader, who posed as a management counselor during the heist, gave them only a small fraction of the stolen money, the equivalent of around $1,500 each, and retained the lion's share for himself.

GM raises prices 2.9 pct.; estimated average is $400

By John K. Teahen Jr.
Senior Editor

General Motors made its expected entry into the price-hike derby last week. It announced that an increase of 2.9 percent will take effect with shipments on April 14.

On the import side, Subaru and Mitsubishi joined the Japanese price-hike procession. Automotive News estimated the average boosts at $519 for Subaru and $407 for Mitsubishi.

GM declined to place a dollar amount on its boost, but Automotive News estimated it at $400. Added to earlier hikes on 1986 models, it means that GM's cars are an average of $950 more than 1985 models.

Last August, GM hiked prices an estimated $400, but that figure did not include its late arrivals—Buick LeSabre and Riviera, Oldsmobile Delta 88 and Toronado and Cadillac Eldorado and Seville. Substantial increases on those models added another $150 to the boost for the overall fleet, according to Automotive News. Fold in the latest $400 and the total bump is $950.

Ford Motor Co. and Chrysler Corp. weren't saying anything about GM's action last week. Good Friday was a holiday in the auto industry, and spokespersons weren't at their phones.

GM listed no model-by-model increases. A spokesman said that information won't be available until shortly before April 14.

GM's action is the first full-fledged price hike by a domestic maker since last fall's introduction period. Ford upped the figures on V-6 and V-8 engines earlier this month, but that was penny-ante stuff, amounting to about $25 when applied to Ford's full range of cars.

In recent months, price increases have been the province of the imports, principally the Japanese.

A price analyst noted last week that by raising its prices, GM has thrown away a chance to regain some of the market share the Japanese have taken in recent years. The Japanese have given up much of their price advantage, but GM will be unable to capitalize fully on the higher Japanese stickers, he said.

GM's reason for the increase was the same as always—"partial recovery of higher labor and other manufacturing costs, as well as the impact of major capital spending and other programs."

GM's price increase will apply to selected options as well as base models. The boosts will not apply to retail sold orders placed with GM dealers through April 12.

Subaru last week announced the biggest hike in the current round of boosts on Japanese cars. Subaru said its increase averaged 4.9 percent. The company did not supply a dollar figure, but Automotive News computed it at $519 on a non-sales-weighted basis.

Mitsubishi checked in with a bump of 3.9 percent. Again, no dollar amount was given, but Automotive News estimated it at $407. It was Mitsubishi's fourth hike of the 1986 model year.

March boosts on other Japanese cars averaged $365 for Honda, $400-plus for Mazda, $455 for Nissan and $466 for Toyota.

Since last spring, Subaru prices have risen an average of $880, or 10.46 percent. But there's a "but."

A year ago, Subaru included dealer prep in its prices. Now, prep is not included. The suggested fee is $144 on the BRAT and $129 on other models. Toyota, Nissan, Honda, Mazda and Mitsubishi prices include dealer prep.

For Mitsubishi, the year-to-year hike averaged $692, or 8.62 percent.

Those increases compare with averages of $1,030, or 10.71 percent for Toyota; $1,023, or 9.58 percent for Nissan; $849, or 10.34 percent for Honda, and $1,225, or 13.59 percent for Mazda (Automotive News, March 24).

For Subaru, last week's hikes ranged from $141 on the BRAT to $627 on the XT Turbo coupe with four-wheel drive and automatic transmission.

Aside from the BRAT and a $212 bump on the base hatchback (now $5,379), Subaru's increases last week were $384 or more per model.

The DL four-door sedan climbed $488 to a new tag of $8,168 and there were bumps of $495 on the base models in the wagon, 3-Door and XT coupe lines. Starting prices now are $8,490 for the wagon, $8,455 for the 3-Door and $9,192 for the XT coupe. Most models went up more than $500.

Mitsubishi last week posted increases ranging from $80 on the Starion LE Turbo sport coupe to $680 on the Galant four-door luxury sedan. The Galant now is $13,899, up $1,670, or 13.66 percent, from a year ago. Galant accounts for about one-fourth of Mitsubishi's U.S. sales.

Mitsubishi Mirage hikes ranged from $210 to $370 last week, with the base two-door hatchback now pegged at $5,869. Tredia four-doors rose $260 to $410 and Cordia two-doors climbed $370 to $430. Starting prices are $7,749 for Tredia and $9,319 for Cordia.

Starion sport coupes advanced only $80-$90. They start at $15,209.

Mid-month car sales retreat from year ago

By Jenny L. King
Detroit Reporter

Domestic new-car sales for March 11-20 were down nearly 50,000 units from a strong year-ago period but were in keeping with those of other years. The mid-March total often has been just over 200,000 units.

The 226,712 deliveries were an improvement over the first 10 days of the month, when 185,904 retail sales were reported. But the mid-March figure was down 17.20 percent from last year's 273,822.

The record for the period is 326,093, set in the recession year of 1981 amid generous factory-to-customer rebate programs.

Year-to-date sales through March 20 numbered 1,661,891, down 4.53 percent from 1,740,801 in 1985.

The recent period's daily-selling rate of 25,190 was off 17.20 percent from 30,425 the preceding year. There were nine selling days in the period both years.

Honda was the only domestic company to report a year-to-year gain. The company increased its share of the market substantially, climbing to 2.22 percent from 1.45 percent. Honda sales were up 26.25 percent, to 5,031 from 3,985.

General Motors reported sales of 123,687, down 14.61 percent from 144,851 last year. Ford Motor Co. was off 22.04 percent, to 58,729 from 75,332. Chrysler Motors sales of 32,085 were down 27.13 percent from 44,030 a year earlier.

American Motors reported estimated sales of 2,100 new domestic Renault and AMC passenger cars. That was a 30.00-percent decline from 3,000 in 1985. Volkswagen sales were down 21.99 percent, to 2,047 from 2,624. Nissan reported sales of 3,033 U.S.-built Sentras.

Honda and GM increased their shares of the market, compared with 1985 levels, while the competition gave ground. Honda was up to 2.22 percent from 1.45 percent. GM advanced to 54.56 percent from 52.90 percent.

Ford slipped to 25.90 percent from 27.51 percent. Chrysler was down to 14.15 percent from 16.08 percent in 1985. AMC skidded to 0.93 percent from 1.10 percent. VW was off to 0.90 percent from 0.96 percent. Nissan, still in its first 12 months in the domestic market, had 1.34 percent for the period.

Sales by make were studded with minus signs. Plymouth was down 37.41 percent, Chrysler was down 15.71 percent and Dodge was down 27.45 percent. Ford was off 24.33 percent, Mercury was down 18.82 percent and Lincoln was off 10.65 percent.

At GM, only Pontiac, up 3.48 percent, pulled ahead of its year-ago total. Buick was down 17.42 percent, Cadillac was down 9.71 percent, Chevrolet was off 1.70 percent and Oldsmobile was down 39.61 percent.

AMC was down an estimated 16.67 percent, Renault was down 31.48 percent and VW was down 21.99 percent. Honda was up 26.25 percent.

Chevrolet Celebrity edged out Ford Escort to take the top-seller spot for the period. Celebrity sales numbered 11,870; the Escort total was 11,350. Chevrolet Cavalier was third at 9,677, followed by standard Chevrolet at 8,072 and Cadillac DeVille/Fleetwood at 6,854.

8 theft-marking shifts turned down

By Geoff Sundstrom
Washington Reporter

WASHINGTON—NHTSA has turned down eight petitions asking for various changes in the new Vehicle Theft Prevention Standard.

In denying the requests, NHTSA made clear that it intends to stick by the final rule it issued last October.

NHTSA said the eight petitions were concerned primarily with three major portions of the rule: The methods manufacturers use to identify parts, the numbering system they must use and the ability of gray-market importers to comply with the standard.

Petitioners included the Automobile Importers of America, BMW, Toyota, Mercedes-Benz, Mazda, the FBI, the U.S. Justice Department and the International Assn. of Auto Theft Investigators.

The three law enforcement petitioners asked that NHTSA specifically require that the Vehicle Identification Number (VIN) be stamped into vehicle parts.

NHTSA denied the request, saying that the theft-prevention standard "is required by law to be a performance standard, which is broadly drafted." NHTSA said it must allow vehicle manufacturers a choice of technology, as long as the technology meets the standard.

Toyota and BMW asked that manufacturers be allowed to use random numbers currently stamped on engines and transmissions as VIN replacements.

NHTSA said it refused the request because use of random numbers does not comply with the statutory requirement "that original equipment parts be identified with the full 17-character Vehicle Identification Number."

When told the use of random numbers would not be permitted, BMW said NHTSA seemed to "bend over backwards" for the domestic manufacturers because it approved the current domestic practice of stamping VIN derivatives on engines and transmissions, yet denied importers the use of random numbers.

NHTSA denied the charge. It said the use of VIN derivatives complies with cost-saving provisions of the law and that reconstruction of a full VIN can be made "within several hours with VIN derivatives, while such reconstructions can take several days with random numbers."

AIA asked the agency to clarify whether manufacturers that currently label engines and transmissions with random numbers may continue to do so, in addition to marking the parts with the VIN. NHTSA said the standard does not prohibit the use of both random numbers and the VIN on engines and transmissions.

AIA also asked that NHTSA rescind a provision allowing gray-market importers to comply with the theft-prevention standard. NHTSA said, "This request was denied because NHTSA believes that the specified procedures are consistent with the underlying law and needs of law-enforcement officers, while imposing the least burden on direct importers and purchasers of cars from direct importers."

Mazda asked for clarification on where certain parts should be marked, but NHTSA said it specified only general target areas for vehicle markings to provide "maximum flexibility to avoid unnecessary production burdens and/or costs."

Mercedes-Benz questioned whether current labeling technology would meet NHTSA's requirement that removal of identification labels "discernibly alters the appearance of the area of the part where it was affixed."

NHTSA assured Mercedes-Benz that 3M Corp. has stated that its labels will meet NHTSA's performance requirements used "over any paint used anywhere in the world."

Great Western Systems awards Dallas franchise

PHOENIX—Great Western Systems, Inc., has awarded a franchise for Dallas to Randy G. Shelton, a Dallas auto parts retailer.

Stnaley F. Gordon, Great Western president, said the Dallas franchisee plans to establish a minimum four-acre auction site in the Dallas area.

EDS planning three additions in Detroit area

AUBURN HILLS, Mich.—Electronic Data Systems Corp. plans to build three new facilities near its information processing center in this Detroit suburb.

Planned are two more 75,000-square-foot IPCs and a three-story, 228,000-square-foot command center, which a company spokeswoman called "a very new concept." The center will be part of a new worldwide telecommunications-related system that EDS is building, the spokeswoman said.

She said the command center "will handle a worldwide digital network for integrated image and voice data." Although EDS did not specify, an industry source said that digital services are telecommunications in which numbers transmitted over telephone lines are translated by computer into images.

Presumably, the command center will provide a network of voice and picture communications.

Construction of the second IPC will begin this spring; it is targeted for completion this fall. Timing of construction of the third IPC will be based on business demands, the spokeswoman said.

Import dealerships soar to record level

Continued from Page 1

kets, making imports more expensive in the U.S..

The overall number of imported-make franchises rose to 20,225 on Jan. 1, 1986 compared with 16,191 one year earlier and 19,897 on July 1.

Naturally, the Japanese-make franchise total showed the largest gain, up 24.3 percent to 15,962 from 12,863 a year earlier.

The addition of the Chevrolet captives once again accounted for most of the increase. All of the other Japanese makes except Toyota and Nissan showed slight increases. The number of Toyota franchises declined from 1,091 to 1,079, while the number of Nissan franchises fell from 1,106 to 1,101. Neither the Nissan or Toyota figures include Hawaiian franchises.

The number of German-make franchises increased 50.3 percent to 2,362 from 1,572, with the new Merkur franchises accounting for 783 of the net gain of 790. Mercedes-Benz and BMW franchises were up slightly, while Audi had the same number of franchises year-to-year and Porsche franchise fell from 328 to 317.

Both Volvo and Saab increased their franchise totals, boosting the Swedish-make figure by less than 2 percent.

An increase in the number of Lotus franchises from 40 to 47 and a gain in the number of TVR franchises from 30 to 41 kept the total number of British-make franchises, 327, slightly above the year-earlier tally of 319, despite lower franchise totals at Rolls-Royce, Jaguar and Aston-Martin.

The 156 Yugo dealers on Jan. 1, created a new-nation category this year.

The Italian and French totals both receded in 1985. Alfa Romeo, up 23, was the only Italian make to report an increase, while Peugeot, the sole French make lost 16 franchises.

The number of dealers able to survive with a single import franchise totaled 2,971 on Jan. 1, 1986, up 4.9 percent from 2,833 a year earlier.

It also was the highest number of import exclusives since the 3,261 reported a decade earlier on Jan. 1, 1976, when VW was still counted among the imports.

Only Mitsubishi reported an entirely exclusive dealer body. However, Honda reported that more than 70 percent of its dealers were exclusives.

Toyota, with 639, had the most exclusives, followed by Honda with 628, Nissan with 593 and Subaru with 313.

The number of import franchised dualed only with other imports also increased last year, to 1,457 from 989 a year earlier, a rise of 47.3 percent.

Another increase came in the number of domestic dealers dualed with non-captive imports, up 45.6 percent to 3,699 from 2,540.

The total number of deals featuring domestic-import duals was up 57.3 percent to 13,535 from 8,605 one year earlier.

The Top Ten in import franchises on Jan. 1, 1986 were Chevrolet captives, 5,050; Plymouth captives, 3,009; Dodge captives, 2,927; Nissan, 1,101; Toyota, 1,079; Honda, 879; Subaru, 819; Merkur, 783; Mazda, 767, and BMW, 433.

Dealership total up 380 for year

The number of dealerships in the U.S. rose slightly in 1985.

At the beginning of this year, the total was 25,104, up 380, or 1.5 percent, over the 24,724 counted on Jan. 1, 1985.

The latest total includes 20,673 dealers carrying domestic lines (Automotive News, Feb. 17)—most dualed with imports—and another 4,431 import-only dealerships.

Ford forms 5 car groups

By Matt DeLorenzo
Los Angeles Reporter

LOS ANGELES—Ford Motor Co. has restructured its car engineering and planning activities around the program-management concept and has named program managers to oversee the five new car line groupings, Stuart Frey, vice president of car product development announced here.

Frey said the change was made to improve efficiency, quality and coordination of new-car programs. Previously, Ford's product programs had been split into two segments, small and specialty cars and large and luxury cars.

"These five groups will improve operating efficiencies, further cultivate team effort and enhance the concept-to-customer product development process," Frey said. "Each program manager will lead a product-program team that will provide coordination and direction over planning, design, engineering, purchasing, manufacturing, product assurance, sales, marketing and service."

The program managers will report to Louis Veraldi, who recently assumed the newly created position of vice president—car programs management.

The five managers and groups are: Kenneth Dabrowski, small-car and specialty-vehicle programs; John Jay, large-car (rear-wheel-drive) programs; Anthony Kuchta, mid-size specialty-car programs; Roger Maugh, import programs, and John Risk, median and large car (front-wheel-drive) programs.

Frey said the program management approach was first used by Ford in the development of the Taurus and Sable. The program management group, which became known as "Team Taurus," coordinated all elements of the product development process from design through public introduction involving all areas of the company, as well as suppliers and dealers.

"We decided to broaden the concept to embrace all car lines based on the success of Team Taurus," Frey concluded.

$15-million Sentra launch

Nissan will launch its 1987 Sentra with a $15-million campaign that will include both print and broadcast media.

The company said this is its largest-ever model-introduction budget.

In addition to the corporate "The Name is Nissan" tagline, the Sentra TV spots and print ads also will carry a "Bye Bye Basics" position line.

The introductory 30-second spot will debut today (March 31) on the CBS telecast of the NCAA basketball championship and the ABC series, McCormick and Hardcastle.

"The strategy behind this advertising is to point out the many luxury features which are standard in the Sentra," said Robert B. Kent, Nissan marketing vice president.

Additional spots have been scheduled for all three major networks beginning April 1.

The 1987 Sentra print campaign breaks April 7 with a four-color, two-page spread in consumer books like Newsweek, Time, People and Sports Illustrated. It will include monthlies like Cosmopolitan, Esquire, Reader's Digest and Smithsonian, the company said.

Winners

Automotive News congratulates the following World Congress "FREE" registration winners:

Anthony M. Narkun
Manager Technical Programs
American Motors Corporation
14250 Plymouth Road
Detroit, MI 48232

John W. Young, Manager
ARMCO Research & Technology
Middletown, OH 45043

Hirotoshi Haga
Assistant Manager
Toyo Soda Manufacturing Co.
Toso Bldg. (3F)
Minatuo-Ku, Tokyo

W.H. Hagenmeyer
Manager Export Products
Chrysler Corporation
39111 Van Dyke
Sterling Heights, MI 48077

Roy H. Sjoberg
Chief Engineer
Chrysler Corporation
P.O. Box 1118
Detroit, MI 48288

William F. Powers
Manager Control Systems
Ford Motor Company
P.O. Box 2053
Dearborn, MI 48121

D.G. Lebut, Advanced Vehicle Development Manager
General Motors Corp.
General Motors Proving Ground
Milford, MI 48042

John Rumel, Chief Engineer
The Goodyear Tire & Rubber Co.
1144 East Market Street
Akron, OH 44316

Chuck Mazurie
Product Sales Manager
GTE Products Corporation
10800 Ford Road
Dearborn, MI 48126

Paul Hasson
Mechanical Engineer
FMC Corporation
1105 Coleman Ave., Box 1201
San Jose, CA 95108

Winning names were selected from a random drawing at the Automotive News Booth #810 at the Society of Automotive Engineers Convention, Feb. 24-28, 1986.

As winners, they will join hundreds of other industry influentials as they chart the future of the car business at the World Congress, July 27-30, 1986.

In its 11th year, the World Congress is an intensive four day program featuring 34 recognized experts from the industry who will discuss a wide range of topics of interest to car dealers, automakers and suppliers.

To find out more about how you can participate in this important industry event, call Sandy de Peyster at Automotive News (313) 446-6000.

Auto production passes 2 million

By Kathy Boyer
Detroit Reporter

U.S. auto makers built their two-millionth car of the year last Monday (March 24). Last year, the two-millionth car was assembled on March 25, also a Monday.

With assembly plants closed on Good Friday (March 28), scheduled production of 132,328 units last week was 25.24 percent below the previous week's 176,995.

Last week's targeted output was also 28.77 percent below the year-ago week's 185,788.

Last week's scheduled production was shared as follows: General Motors, 54.28 percent; Ford Motor Co., 23.81 percent; Chrysler Corp., 15.30 percent; New United Motor Mfg., Inc., 2.46 percent; Honda of America Mfg. Co., 2.06 percent; Volkswagen of America, 1.21 percent, and Nissan Motor Mfg. Co., U.S.A., 0.88 percent.

AMC's Kenosha plant was down last week for inventory adjustment.

All assembly plants are closed today (March 31). The holiday is being taken in observance of Martin Luther King Day, which occurred in January.

As previously reported, production of the Oldsmobile Cutlass Supreme and Buick Regal is suspended this week to adjust inventories.

The shutdown on those models affects 1,600 workers, bringing GM's temporary layoffs to 10,300.

Daily overtime is slated this week at all Ford plants except Chicago.

Saturday (April 5) overtime is scheduled at Ford's Wayne (Mich.) and Chicago plants.

Chrysler's St. Louis (No. 2) plant is slated for daily overtime this week.

Production begins April 1 for Omni/Horizon America

Production of the 1987 Plymouth Horizon America and Dodge Omni America models will start tomorrow (April 1) in the Belvidere (Ill.) assembly plant, Chrysler Motors announced.

The company said Belvidere's straight-time production rate will increase to 1,106 units per day from 1,085 units.

Richard E. Dauch, executive vice president—manufacturing, said, "The America models will reduce the permutations of scheduling complexity. There were about 8 million ways an Omni/Horizon could be ordered in the past and we've reduced that to 14 basic product decisions for the customer and to less than 700 total variables for the plant to control.

"We expect to have a dramatic improvement in process capability and repeatability and to improve our quality and productivity while reducing our cost."

The company reduced the number of versions of Omni/Horizon from five to two, monotone and two-tone exterior paint combinations from 14 to six, engine options from four to one and options from 30 to five.

Standard equipment includes 2.2-liter engine, 5-speed manual transaxle, power brakes, electric rear-window defroster, rear-window washer/wiper, cloth and vinyl low-back bucket seats, tinted glass, 13-inch rally wheels, wheel trim rings, glove-box lock, vanity mirror, sport steering wheel, steel-belted radial tires and rally instrument cluster with tachometer, voltmeter, oil pressure and temperature gauges and trip odometer.

The America models will have a Manufacturer's Suggested Retail Price of $5,499. Two discount equipment packages will be available. The $500 Manual Transmission Discount Package includes power steering, console, AM/FM stereo radio, high-back cloth seats and cargo compartment dressup.

The $850 Automatic Transmission Discount Package includes all of the above, plus automatic transmission.

Two additional options are available with either of the discount packages. They are air conditioning and AM/FM stereo cassette radio.

Public introduction is set for May.

Holiday slows Canadian output

Plant closings on Good Friday cut production in Canada last week.

The auto makers scheduled 20,940 units, 14.90 percent below the previous week's 24,605.

However, last week's production was 23.31 percent better than the year-ago week's 16,982, which reflected downtime at American Motors and Ford Motor Co. plants.

So far this year, 269,952 cars have been assembled, 9.94 percent more than the 245,551 built last year at this time.

Truck makers pegged production at 14,502 units last week, 25.92 percent fewer than the previous week's 19,576 and 22.69 percent below the year-ago week's 18,759.

Year-to-date, 231,853 trucks have been built, 2.03 percent more than the 227,242 completed last year at this time.

Truck production slips to 59,632

Because of the Good Friday holiday, last week's truck production fell to 59,632. It was 20.39 percent below the previous week's 74,909 and 13.99 percent below the year-ago week's 69,335.

Year-to-date, 884,219 trucks have been assembled, 4.34 percent more than the 847,431 completed last year at this time.

All Ford plants except Norfolk are scheduled for daily overtime this week, beginning April 1.

Saturday (April 5) overtime is slated for Ford's Twin Cities plant.

Chrysler hires Italian firm to re-do glass plant

Chrysler Corp. and Societa Italiana Vetro have signed a $44-million contract for the Italian company to modernize the McGraw glass manufacturing plant in Detroit.

The contract is the major part of a $54-million modernization project at the plant.

Societa Italiana Vetro, based in San Salvo, Italy, is a designer, producer and supplier of automotive glass fabricating equipment.

"Over the next three years, SIV will replace virtually all the existing machinery and equipment with advanced systems and processes for glass cutting, grinding, printing, bending, laminating and tempering," said Lee H. Runk, vice president of Chrysler's Component Business Operations.

The plant, built in 1936, has been used for glass fabrication for Chrysler vehicles since 1960.

Runk said the modernization will allow McGraw glass to compete in a world market and sell its products to other auto manufacturers as well as Chrysler.

Production will be uninterrupted because the project will be carried out in three phases at the 423,000-square-foot plant.

GM and Hughes: Perfect mates

By Michelle Krebs
Financial Editor

EL SEGUNDO, Calif.—Donald Atwood, president of the new General Motors Hughes Electronics Corp. (GMHE), describes the GM-Hughes marriage as the total truly being greater than the sum of its parts.

Hughes Aircraft Co. offers GM technology that the auto maker can use in its products and factories of the future. Hughes also is a good business investment on its own.

GM, on the other hand, provides Hughes with expertise in high-volume manufacturing.

Together, the two companies can take advantage of business opportunities that otherwise would not be available to them individually.

Three months after the consummation of the largest non-oil hookup, the potential for the two companies individually and combined is becoming clearer.

GM won a bidding contest for the highly sought after Hughes last summer. In December, 1985, GM paid the Howard Hughes Medical Institute $2.7 billion in cash and 50 million shares of stock in GM Hughes Electronics, a subsidiary made up of Hughes, GM's Delco Electronics and portions of other GM electronic divisions.

Computer gives instructions for assembly

"GMHE is the embodiment of the word synergy," Atwood said in an interview with Automotive News, "because if I take two independent companies, Hughes and Delco, both strong, both headed in one direction—Delco in its automotive business, Hughes in its defense and space business—and put them together, they are both individually stronger than they would be without the other."

At the top of the list of jobs to be done is the transfer of Hughes' technology to GM.

"It is the mission of GMHE to effect the transfer

Japanese makes head the list in sales per dealer

By Jenny L. King
Detroit Reporter

The sales-per-franchise story is import dealers, especially those with Japanese franchises, are selling cars in record numbers.

In 1985, they were numbers that stunned even lively imaginations.

Honda dealers averaged 640 new-car sales per outlet. Mitsubishi dealers tallied 598 new cars per outlet. Toyota averaged 572, and Nissan weighed in at 520.

Compare those numbers with those of the domestic leaders: Oldsmobile at 334 sales per franchise, Chevrolet at 331 per outlet and Ford at 295 per dealer.

New-car sales, up just over 6 percent in 1985 compared with 1984, included a modest 3-percent climb for domestics and a 16-percent increase for imports. Import sales set a record.

The import dealer population swelled to an alltime high with an influx of import franchises, largely Chevrolet Sprint/Spectrum and Lincoln-Mercury Merkur captives. The domestic dealer total was down slightly for the year.

The overall average number of new-car sales per outlet for calendar year 1985 was 445, up from 420 in 1984. Two years ago, as the sales recession was turning around, the overall average was 374.

Domestic dealers averaged 393 sales per dealership in 1985, up from 380 a year earlier. The 1983 domestic average was 330 in 1983.

The 1985 average of 192 for import dealerships was down from 222 in 1984 due to the swelled dealer population. In 1983, import dealers had an average of 235.

When total truck sales, which also hit a record high in 1985, were folded in, the sales per outlet for some franchise holders rose tremendously. Mitsubishi figured to 920 cars-truck sales per dealer. Toyota was at 874, Nissan at 751,

$1 billion order due for Grumman

By Geoff Sundstrom
WashingtonReporter

WASHINGTON—Grumman Allied Industries is expected to receive a contract from the U.S. Postal Service this week for 99,150 vehicles valued at $1.1 billion.

General Motors will supply Grumman with the vehicle chassis, engine and transmission. GM said the vehicle is based on a GM S-10 Blazer platform.

A Grumman spokesman said the vehicle will be assembled at the Grumman Allied Industries truck plant in Montgomery, Pa. The company employs 230 workers at its Montgomery plant and expects to hire "upwards of 200" more once the contract is awarded.

Grumman currently assembles Olson truck bodies at the central

Pennsylvania facility. The contract will roughly double Grumman's truck business.

The contract calls for 1,100 vehicles per month to be delivered during an eight-year period, with an option for 59,000 additional vehicles.

A competing vehicle built by LTV Co.'s AM General Division and a vehicle designed by a consortium headed by Fruehauf Corp. are also in the running. They are considered weak contenders, however, because prototypes supplied by those companies failed 24,000-mile tests conducted last year at Uniroyal's test track in Laredo, Tex.

The Postal Service's board of governors will award the contract at tomorrow's (April 10) meeting in Atlanta. Only the Grumman prototype has met USPS requirements, Postal Service officials said.

The Grumman vehicle is intended to do double-duty, replacing both the well-known quarter-ton postal Jeep and the Postal Service's fleet of half-ton trucks. It is designed for right-hand drive to facilitate mail pickup and delivery and can be converted from

Honda wives tackle a strange new land

By Jenny L. King
Detroit Reporter

WORTHINGTON, Ohio—There they were, in a very small room, sitting around a rectangular table, exchanging embarrassed glances and smiles with their guests.

The "guests" had little cups of strong, black coffee before them; the students had books—workbooks and dictionaries.

The guests wanted to know how the students, all young Japanese matrons, liked living in Ohio. The setting was the classrooms of Honda of America's Family Room program for the acculturation of the wives of men transferred to Honda's manufacturing plant in Marysville, Ohio. It's part of a program, which includes Japanese language lessons for children on Saturdays, to help Honda families adapt.

As the wives and their guests visited, questions grew longer and longer as the visitors tried to simplify them. Would the women understand? Most of them had been in this country less than a year. Their English lessons were not easy.

Using books from an existing curriculum, they were struggling with a conversation about, "Are you going to the game?" when the visitors interrupted.

A second student responded, "No," followed by one of several reasons:

For example, "No, I am going to build a bookshelf," or "No, I

GM's Smith is keynoter

Roger B. Smith, General Motors chairman and chief executive officer, will deliver the keynote address at the 11th annual Automotive News World Congress. He will speak Sunday, July 27, and his topic will be The State of the Industry.

International automotive industry leaders and top-level executives in related fields will address the World Congress, which will be held July 27-30 at the Hyatt Regency Dearborn.

Following Smith's keynote address, Edward L. Hennessy Jr., chairman and chief executive officer of Allied-Signal Corp., will speak on The Supplier Perspective.

Speakers at the general sessions on Monday, July 28, will include Robert Crandall; senior fellow, Brookings Institute, whose topic will be Real Manufacturing Costs

AMC facing decisions for survival

By Richard Johnson
Detroit Reporter

American Motors has entered an unprecedented period of transformation that should determine whether the company survives into the 1990s.

With a new president and chief executive officer, AMC is on the verge of a top-to-bottom makeover of its product line and manufacturing installations, and the changes could even extend to relocation of corporate headquarters.

News Analysis

During the next 60-90 days, Joseph Cappy, the new president and CEO, will face a series of crossroads decisions, all inextricably bound together.

If, when and where AMC decides to build a new assembly plant depends on what product the company will put in the plant. And that, in turn, will hinge largely on whether AMC forms a joint marketing or manufacturing agreement with an Asian auto maker.

AMC could replace both its outdated Kenosha and Toledo assembly plants with one or two plants, or it could decide to build nothing, leaving all or part of the Toledo Jeep facility operating and ceasing production in Kenosha.

Cappy acknowledges a cornucopia of options, but the company is expected to decide something very soon. A decision on a new assembly plant has already been pushed back several weeks.

AMC officials had expected to conclude the issue by early spring in order to set product plans for the 1990 model year. But Cappy now talks about a decision in June and hints that it might be put off even longer since, he said, the Kenosha-built Alliance/Encore, scheduled to be terminated after the 1989 model year, could be extended a year.

"There is a whole realm of things in terms of which direction do we move and what's the timing for those directions," Cappy said in a interview with Automotive News. "It's very fluid. If I knew for sure, I could make the decision today. But without knowing where we are, what we can do and who we can do it with, you have to remain flexible."

Among the decisions he faces is whether to focus on bringing out new Jeeps or passenger cars after three new Renault products are launched next year. And that could play a significant role in where AMC decides to build a new plant.

"It takes three years to bring out a car, so there comes a time when you finally have to make a decision as to which one you're finally going to be putting all your resources on," he said. "We may decide, for example, to pull ahead a Jeep program and back up a car program because we see a greater profit opportunity.

"Look at what we did from 1981 to 1985," Cappy added. "We spent $1.3 billion and we put the bulk of that into Jeep. Now, we've got the Jeep behind us and its providing a strong prop and support for the company and so we move into the passenger car. Well, how fast do you start redoing the Jeep line?

"You know, the problem with this corporation in the past is it

Beware of 'myths,' industry told

By Matt DeLorenzo
Los Angeles Reporter

ANN ARBOR, Mich.—Although the U.S. auto industry has rebounded dramatically, a Harvard business professor told the Sixth Annual U.S.-Japan Automotive Industry Conference here that the domestic industry has yet to attain a strategic comeback and faces even more serious challenges ahead.

"Something is changing in the competitive environment," Michael Porter said, adding that he feels there is "a collection of myths of what the challenge represents."

Related story on Page 12

One of those myths is that the profits of the past few years mean the domestic industry has made a comeback. Porter said he finds that "more disturbing than comforting" when viewed in context.

"Import penetration is now more than double what it was 10 years ago and it's growing in wider and wider ranges," he said.

The Japanese have a competitive advantage in offering low-priced, entry-level cars. Now that they are moving up, the Japanese are challenging the domestic makers in the larger-car market where the U.S. companies had the advantage.

The U.S. makers "lack a competitive advantage," Porter said, "They are not low-cost, there is no differentiation and they are chasing a rapidly moving target (the Japanese)."

Porter said these changes open the low-cost, entry-level segment to new companies from other countries, such as Korea.

"I think Hyundai represents a serious threat," he said.

Two other myths, according to Porter, hold that the high volume of U.S. makers is one of their competitive strengths and that the major Japanese advantage is their low-cost position.

On the high-volume issue, Porter said that advantage is being eroded because the market is becoming increasingly segmented.

"The ability to make and sell a complex product line will be an important source of competitive advantage of the future," he said. As for the Japanese relying on low cost as a source of competitive advantage, Porter said it's true that they do have a significant cost advantage, however, the repositioning of their product lines into broader ranges means that

Ephlin slaps GM increase

By Mary Connelly
Detroit Reporter

The head of the UAW's General Motors department said he can see no strategic justification for GM's planned price hike and will protest the action to the company's management.

UAW Vice President Donald Ephlin said the 2.9-percent increase that is slated to take effect April 14 could lead to loss of market share and result in loss of jobs for union members.

NADA didn't like the price hike either. The dealer group said it members are "dumbfounded and perplexed" by GM's action.

Ephlin said that instead of raising prices, GM should have taken advantage of the strengthening value of the Japanese yen in relation to the U.S. dollar which has forced Japanese manufacturers to raise their prices in this country.

"I don't know what their justification is," Ephlin said, adding that he was not notified of the impending hike. "I'm disappointed because it hurts the effort to capitalize on the situation. Japanese price are going up, and it seems like it would have been a good opportunity to regain lost ground."

GM's action was the first full-fledged price hike by a domestic maker since last fall's introduction period. GM has listed no model-by-model increases yet.

In announcing the increase, GM blamed "partial recovery of higher labor and other manufacturing costs, as well as the impact of major capital spending and other programs."

Ephlin dismissed the labor-cost justification as "a cliche of the public relations department."

"It's never due to the fact they have too much burden or overhead," he added.

Ephlin was interviewed while attending the Sixth U.S.-Japan Automotive Industry Conference in Ann Arbor, Mich., last week.

Conference speakers also questioned the wisdom of GM's pricing move.

Noting the changing dollar/yen relationship, Maryann Keller, director of Vilas-Fischer Associates, said, "This was and is a unique opportunity for the American automobile industry to increase market share. To be able to advertise superior value was an advantage."

Saying she was "disappointed" by GM's move, Keller said that if price increases become industry-wide, they will "play into the hands" of the Japanese manufacturers.

Michael E. Porter, professor of business administration at Harvard University and a conference speaker, said GM was exploiting the yen/dollar relationship to gain profitability.

He said a price hike is counterproductive to what should be GM's aim of strategic repositioning in the market.

Porsche drops plans to import $150,000 model

Porsche Cars North America will not offer the high-performance 959 for sale in the U.S. as planned, the importer announced last week.

However, many of the high-tech features of the $150,000 car will be adapted to other U.S.-bound models as quickly as possible, Porsche's U.S. sales arm said.

Porsche said it dropped plans to import up to 200 959s beginning in late 1987 or early 1988 because the car does not meet U.S. standards for minimum bumper height.

The 959 is equipped with a variable road profile adjustment which lets the driver select bumper heights ranging from less than five inches to just under eight inches. Federal requirements mandate a bumper height of at least 12 inches.

Modifying the 959 to meet federal bumper standards would have "destroyed" the car and could have doubled its price, said John A. Cook, president of Porsche Cars North America.

In addition, Porsche engineers in Weissach, West Germany, have not succeeded in refining the 959's 2.8-liter, twin turbo, 6-cylinder engine to meet U.S. emissions regulations, he said.

Porsche AG will build about 200 of the 959s for sale in Europe. About 25 of the 185-MPH cars still are expected to be brought into the U.S. for racing, a Porsche spokeswoman said.

—Dave Zoia

Austin Rover shooting for 25,000 sales

By John A. Russell
New York Staff Writer

NEW YORK—Austin Rover Cars of North America now is predicting 25,000 first-year sales of its Sterling four-door sedan, which will be introduced in the U.S. next January.

The new sales projection is an upward revision of the 20,000 figure the company has been using and apparently is based on strong dealer acceptance of the British-built car.

Ray Ketchledge, president of the Miami-based importer, said last week that everything is moving along as scheduled to meet the January introduction date. He expects to have the entire dealer network in place soon, and another wave of appointments will be announced next month.

When the dealer appointments are completed, the company will have 135 outlets.

He said production is scheduled to start in the fourth quarter of this year. He also said the Sterling will be offered in two trim levels and will be priced in the $18,000-to-$24,000 range.

Ketchledge said the company has about 900 dealer applications. He described those who have been appointed as "heavy hitters." They are drawn from both the import and domestic-dealer ranks, and all have strong reputations in their local markets, he said.

Austin Rover Cars of North America now has 30 employes at its Miami headquarters and expects to have 80 to 100 by December. Many of them will be in service, parts and warranty administration.

Ketchledge said he is trying to keep the "head count down" through the use of computers. He said a smaller staff eliminates layers of management and enables the company to stay close to dealers and consumers.

Ports of entry for the Sterling will be Newark, N.J., and Long Beach.

The company recently selected Kermish-Geylin, New York, to handle public relations.

In addition, Ketchledge said, Charles Conklin has joined the company's advertising agency, Bieber-Silverstein, as senior vice president and will be in charge of the Austin Rover account.

Ketchledge said he does not believe Honda's Acura Legend will have an impact on the Sterling because the cars are different even though both are products of a joint venture between Honda and Britain's Austin Rover.

Ford panel to study prospects in China

By Richard Johnson
Detroit Reporter

Ford Motor Co. has formed a special committee within its corporate staff to study business prospects in the People's Republic of China.

The special panel is part of a more general reshaping of the company's management structure in the Northern Pacific region which has taken place in recent weeks.

Ford's China Study Team, headed by Carl G. Roth, "is working to establish relations with officials in China to determine whether and how we can do business with them," a Ford spokesman said.

As part of the restructuring, the office of John Devine, Ford's executive director for Northern Pacific Business Development, has been spun off from Ford's operational management in the Asia-Pacific region. Devine now reports to Ford's Corporate Strategy Staff. His duties are "development as opposed to operational," according to the company spokesman.

"This gives John a clearer direct line of responsibility back to Dearborn," said the Ford representative.

Devine's office previously functioned under Mervyn Manning, president—Ford Asia-Pacific, based in Australia. Manning no longer has a direct role in Japan or Korea. Ford will import a minicar from Korea's Kia Motor Co. later in the decade. Asia-Pacific operations now consist of Ford affiliates in Australia, New Zealand and Taiwan.

According to the Ford spokesman, Devine "interfaces with Mazda and Ford of Japan, has a hand in getting our ducks in order in Korea for the Kia operation and has a role in Ford's negotiations with China."

At a recent meeting of the Detroit Auto Writers Group, Philip E. Benton Jr., Ford's new executive vice president for International Automotive Operations, said China will not fall under his direct control.

"China in our organization is the subject of a special committee that is still held within the corporation as to what do we do in China," he said. "I will participate in it as a member of Ford Motor Co. management, but it will not be unique to international."

Last August, Ford Vice President Lindsay Halstead conducted exploratory talks with Chinese Vice Premier Wan Li at the invitation of China National Automotive Industry Corp. Discussions centered upon a possible joint venture involving production of light trucks.

The Ford spokesman last week said he was not aware of additional meetings between China officials and corporate vice president-level Ford executives since the Halstead visit.

After his 1985 trip, Halstead indicated no Chinese deal was imminent because Ford executives were not convinced China could achieve its ambitious industrialization objectives.

AMC may not build Comanche in China

By Richard Johnson
Detroit Reporter

American Motors and its Chinese partner, Beijing Jeep Corp., may scrap plans to begin assembling Jeep Comanche pickup trucks in Beijing this fall.

AMC President Joseph Cappy said AMC is rethinking its Comanche production program because of a shortage of foreign exchange currency in the People's Republic of China.

Beijing Jeep plans to build the new part-time four-wheel-drive pickup for sale in China initially and later for export in the Asia-Pacific rim. But the fall production startup is now uncertain.

"It might not happen," said Cappy in an interview with Automotive News. "The plans are to still consider that, and once I know how much foreign exchange is going to be available we'll make that decision."

A lack of foreign exchange capital has already caused AMC to cut back Cherokee production for 1986. Originally, Beijing Jeep targeted assembly of 6,000 units, but plans have been scaled back to 2,000-4,000 units this year, according to Cappy.

Beijing Jeep began building Cherokees last fall and also assembles an upgraded version of the 4WD BJ212, a 30-year-old Russian-designed vehicle based on the Jeep CJ.

Cappy said the company recently obtained an import license for 1,000 Cherokee kits from the Chinese Government.

"I think the wheels have started to roll again," he said.

But the fate of Comanche production this fall is still up in the air.

Parts to cost more from Third World

WASHINGTON—U.S. auto makers sourcing automotive parts and accessories from Third World countries can expect to pay more for them this year in the wake of the Reagan Administration's decision to lift the tax-exempt status for some of these countries.

Hit most immediately by the decision are Mexico, Taiwan, Brazil and South Korea. In some cases, these countries enjoy near-monopolies in providing certain parts to U.S. auto makers.

U.S. Trade Representative Clayton Yeutter, in announcing the decision, said the countries involved had become sufficiently competitive in particular products to compete in the U.S. market without the tariff exemptions.

In 1985, a total of $13.3 billion in tariff-free imports came to the U.S. The Reagan Administration decision will chop at least $3.2 billion from that in 1986.

Among the hardest his is Mexico which, among other items, sold nearly $472 million worth of wiring harnesses, some $407 million in auto parts and nearly $94 million worth of auto seats and interior trim to U.S. auto makers in 1985.

With the decision to lift tariff exemptions for these items, exporters will pay tariffs of 5 percent on wiring harnesses and 3.2 percent on parts and seats, according to the U.S. Customs Service.

Taiwan, another that will be hard hit by loss of tariff exemptions, shipped some $71 million worth of wiring harnesses to the U.S. in 1985, as well as $117 million in automotive parts.

Under the new rules, Brazil will lose its tariff-free status for approximately $164 million in auto parts exports as well as $97 million in auto tire exports.

South Korea would lose its tariff exemption for $181 million of auto tire exports.

The tariff on tires is 4 percent.

Special finance rate pulls in prospects

Dealer's 5.75 incentive ignites sales action

By Edward Lapham
Marketing Editor

Finance-rate incentives still sell cars.

While the factories were licking their March sales wounds last week and wondering what to try next, Glassman Oldsmobile-Saab, Southfield, Mich., used a three-day, 5.75 APR program to clear out a "record level of inventory."

During the promotion, the dealership wrote orders for 237 cars, 12 of which were Saabs.

"We did in three days what we normally would have done in a very good month," said George Glassman, vice president and general manager of the suburban Detroit dealership.

"People are waiting for a reason to buy," Glassman said. "There is no question that people are motivated by the interest rates. They are motivated to buy cars and they are motivated to buy homes."

Glassman said it took "four or five weeks" to put the program together with two local banks. He said there was no pre-established cap, but the banks seemed to be approving non-recourse loans of 48 months or less for amounts under $10,000.

Glassman said he also is participating in the current General Motors Acceptance Corp. program.

"We had people coming in from as far away as Muskegon and Sault Ste. Marie," Glassman said.

Muskegon, on the west coast of Michigan, is 175 miles from the suburban Detroit store. Sault Ste. Marie is some 300 miles away.

Meanwhile, Ford, Chrysler and General Motors were contemplating the market. The current factory APR programs, mostly 9.9 percent with a smattering of lower rates on selected models, will expire by the end of the month. That has left a very pregnant expectation about what the factories will do next.

There are many choices facing the factories as dealers look with anticipation to the spring selling season. Insiders say the marketing people at Chrysler and GM are devising new programs, designed to "juice" the post-APR spring market.

Glassman believes APRs can still work if the numbers are right. His dealership's program was a success, but it did get a boost from three days of sunny, unseasonably warm weather as well as an inordinate amount of publicity.

"It was unbelievable," he said. "People were taking numbers and waiting for up to an hour and a half to buy a car."

Domestic sales plunge 15 pct.

By Jenny L. King
Detroit Reporter

New-car sales in March came in like a toothless lion and wandered out like the smallest of lambs. Domestic sales were down in each of the three reporting periods and brought to four the number of consecutive periods of decline.

Import sales were more Leo-like, up 22.95 percent March to March and capturing 27.60 percent of the month's market. It was their largest share so far this calendar year and represented a gain of nearly seven percentage points over the 20.75 percent earned in March, 1985.

Total new-car sales in March were off 7.56 percent, to 896,838 from 970,221 last year. Industry sales for the first quarter reached 2,603,058, off 1.56 percent from 2,644,331.

Sales of domestic new cars plunged 15.55 percent, to 649,351 —their lowest level in three years —from 768,927 in March, 1985. First-quarter domestic sales were down 7.03 percent, to 1,898,626 from 2,042,164.

March import sales totaled 247,487, up 22.95 percent from 201,294. Import sales for three months were 704,432, up 16.98 percent from 602,167.

There was bad news galore for the domestics in March; all of them except Honda were down from year-ago sales levels.

General Motors lost the least on a percentage basis, but GM still fell 14.29 percent, to 355,880 from 415,218. Ford Motor Co. was down 18.02 percent, to 167,490 from 204,315. Chrysler Motors was down 21.42 percent, to 90,945 from 115,729.

Honda reported sales of 15,175 new Accords, up 0.90 percent from 15,039 a year ago. Volkswagen dropped 14.31 percent, to 6,198 from 7,233. American Motors' sales of 6,300 domestic units were 44.70 percent below 11,393 in 1985. Nissan Sentra sales numbered 7,363.

GM earned 54.80 percent of the domestic market in March, up from 54.00 percent a year earlier. Ford dropped to 25.79 percent from 26.57 percent. Chrysler cornered 14.01 percent this year

Toyota defies NHTSA plea for recall

WASHINGTON—Toyota Motor Co. said it is not going to recall approximately 74,000 Cressida cars from the early 1980s even though NHTSA would like it to do so to correct an alleged "sudden acceleration" problem.

A Toyota spokesman said the company was aware of some reports of sudden acceleration in 1982 and 1983 Cressidas, but he said Toyota "hasn't been able to determine the cause of these alleged incidents."

NHTSA, which has reports of 40 incidents of sudden acceleration in 1982-1983 Cressidas, attributed the alleged problem to a defect in the Cressida cruise control system, but Toyota said it had not been able to confirm that.

In a letter dated Feb. 28, the safety agency asked the company to recall 1981 through 1983 models. Under guidelines established earlier this year, NHTSA did not disclose that request to the public.

The Center for Auto Safety, which had been urging the agency to look into the alleged problem since 1983, chided NHTSA for not pressing for a mandatory recall of the cars and for refusing to expand the scope of its investigation to post-1983 Cressidas.

At the same time, the consumer group asked that NHTSA also look into alleged sudden acceleration problems in 1983-1984 Toyota Camry models.

Firm offers leasing franchises

By Matt DeLorenzo
Los Angeles Reporter

LOS ANGELES—National Dealer Consultants, a firm that provides marketing and advertising services to auto dealers, has formed a franchise leasing company called Incentive Leasing, Inc.

The San Diego-based firm has sold 23 franchises to date and hopes to have 2,000 franchises within 13 months, according to Ron Carpenter, Incentive's director of franchise sales.

"It's a new concept in merchandising," Carpenter said of the program, which is seeking to establish leasing franchises similar to car rental or real estate setups such as Hertz or Century 21.

An added twist is that Incentive is also hoping to use a multi-level marketing organization similar to Mary K cosmetics or Amway as a bird-dog network to drum up additional business for the franchises.

The firm's first-year sales projections call for 500 franchises by year-end writing about 40 leases per month and generating $300 million in gross sales per month.

Carpenter said that auto dealers mainly have been putting up the $18,500 it takes to obtain a franchise. However, one of the stipulations of Incentive Leasing is that the outlet be a free-standing location and not part of a dealership. Carpenter said some franchises will be in shopping centers while others will be separate facilities along auto rows.

While the parent company will provide the national advertising and marketing effort, the individual franchisees will be responsible for obtaining their own vehicles.

Leases will be closed-end, nonrecourse contracts, and Incentive is providing access to 29 lending institutions nationally that will carry the paper. Carpenter said NDC eventually will buy leases through a subsidiary called NDC Discount, Inc.

Advertising will be funded by a $110 charge per lease which will go into a co-op fund. In addition, Incentive charges a 1.25-percent franchise fee on the cap cost of each lease.

Asked if the company will be looked upon as competition to other auto dealers, Carpenter said it would not. "The dealers are aggressively after the business; they're looking at that guy (a franchisee) as a customer that can buy a car," he said.

In addition to the leases that the franchisee writes, Incentive is also looking at multi-level marketing groups as a means of bringing in additional business.

According to Carpenter, the system would use several layers of representatives who would refer business back to a franchisee with each level participating in the profit from the lease. On those leases, Carpenter said, 50 percent of the profit would be returned in commissions to the multi-level participants.

On the scene at Dallas Auto Show

Thomas J. Wagner, left, Lincoln-Mercury general manager, and Michael H. Savod, Dallas district sales manager, examine a Merkur Scorpio at the Dallas Auto Show. The Scorpio goes on sale in the U.S. this fall. Wagner was the keynote speaker at the luncheon to kick off the show.

Special center to service limousines in Atlantic City

ATLANTIC CITY—Atlantic City will be the location of a totally new concept in limousine operations, according to Anthony Merlino, president of Limo-Land, Inc.

"The limousine industry is becoming one of Atlantic City's fastest growing businesses," said Merlino.

"Yet, the city has lacked an integrated facility (for) the more than 500 limousines that bring visitors here every week. In addition, hotels in Atlantic City operate their own fleets of limousines, and they now have to drive at least 60 miles for factory-authorized service on their cars."

Every serviceman at Limo-Land is a factory-trained specialist from Cadillac and Lincoln, as well as Moloney Mfg. Corp., the Chicago-based firm that produces stretch limousines.

Merlino said the mechanics will provide a complete line of services, including lube and oil, wheel alignment, cleaning and polishing, electrical and gadget component parts service, reupholstery, VCR and stereo service and engine diagnostic evaluation and mechanical service.

The Limo-Land operation will also provide a recreational area for limo drivers who often have to wait several hours for return trips.

While their vehicles are being serviced, drivers may browse through a showroom with Moloney limousines on display. Limo-Land will also be a sales outlet for customers seeking to update their limousine business.

Merlino has also taken care of drivers' return trips to hotels and casinos by providing a computerized hookup that identifies prospective customers needing rides.

"This computerized service is revolutionary in the industry," said Merlino. "It will help reduce or, if successful, eliminate the return trip being a nonprofit trip for the livery services that affiliate themselves with Limo-Land."

Special K.C. auction

KANSAS CITY—Kansas City Auto Auction will stage a Corvette and Special Interest Sale April 15 and is expecting the event to feature some 300 Corvettes and specialty cars and trucks.

Any Ford-Fiat talks would be limited

By Richard Johnson
Detroit Reporter

If negotiations between Ford of Europe and Fiat are revived in the wake of an expected joint venture involving Ford and Fiat's Iveco truck subsidiary, they will probably be on a much smaller scale.

Philip E. Benton Jr., who became executive vice president for International Automotive Operations on April 1, said a reawakening of interest in the collapsed talks would likely be concentrated on one or two specialty-car models.

Ford of Europe and Fiat broke off joint-venture discussions last fall, but the Ford subsidiary is said to be nearing an agreement with Iveco on a joint venture for marketing and developing new trucks in Europe (Automotive News, March 10).

"I don't think we have put that completely to bed, but nevertheless we have been holding very serious talks with Iveco and may be close to some form of arrangement," Benton said at a recent meeting of the Detroit Auto Writers Group.

As for a rebirth of Ford-Fiat talks on car operations, Benton said, "I think it less likely that we would leap to a re-examination of the whole car business than it is that we would look for other smaller pieces, like a specialty model or something like that."

Benton said he is not aware that any such discussions with Fiat are in progress. But he said a new round of talks with Fiat would probably focus on a relatively low-volume model, such as a sports car.

"I think it much more likely that if something were to follow the truck arrangement it would be more that (sports car) than it would be a full car," he said.

The earlier Ford-Fiat discussions aimed at a broad merger in the intensely competitive European automobile market. They ended because each company wanted to be in control of the joint venture. Fiat's Iveco will reportedly control the expected truck venture because the Italian company's share of the European truck market far outstrips that of Ford.

Benton said the logic behind the Ford-Iveco deal "is as simple as putting two separate truck companies together, and instead of making two investments for the next generation of new trucks, you make one."

"It's just more efficient utilization of very limited capital in a business which is very unprofitable at the present time in general, the heavy-truck business in Europe," he said.

Saab sales set record for 48th month in a row

ORANGE, Conn.—Saab dealers in the U.S. chalked up their 48th consecutive monthly sales record in March.

"It takes real teamwork to maintain that performance level every month for four years without a break," said Robert J. Sinclair, president, Saab-Scania of America. "As far as I can tell, no other auto maker has ever matched this."

In April, 1982, Saab dealers delivered 1,513 cars, then a record for April. Every month since then has been an alltime high for that month.

Saab sales in March, 1986, totaled 3,703, up 14 percent from 3,245 in March, 1985. First-quarter sales climbed to 10,063 this year, up 16 percent from 8,684 last year.

Saab's 1986 sales goal in the U.S. is 45,000 cars. In 1982, the year the string of records began, Saab sales totaled 18,179.

Veraldi to address meeting on quality

DEARBORN—Lewis C. Veraldi, Ford Motor Co. vice president, luxury and large car engineering and planning, will be the chief speaker during the two-day National Automotive Division Conference of the American Society for Quality Control opening here tomorrow (April 8).

The annual meeting, the 29th of its type, will focus not on statistical process control (SPC) methods, as has been common recently, but on what purchasing and engineering functions can do in enhancement of quality,

Domestic sales plummet 15 pct.

Continued from Page 3

compared with 15.05 percent in 1985.

American Motors had 0.97 percent, down from 1.48 percent. Honda's 2.34 percent was up from 1.96 percent and VW inched up to 0.95 percent from 0.94 percent. Nissan earned 1.14 percent of the March domestic market.

Aside from Honda's 0.90-percent increase, sales were down across the board for domestic makes.

Imports welcomed Honda's Acura Division aboard, and freshman Hyundai reported sales of 10,432 Excels its first full month on the market.

March 21-31 domestic sales plunged 21.48 percent, to 235,735 from 301,496. Even Honda was down this time, 2.63 percent. GM dropped 23.70 percent, Ford was off 19.03 percent, Chrysler was down 22.09 percent, AMC plunged 57.86 percent and VW was off 9.58 percent.

March car output lowest since '83

By Kathy Boyer
Detroit Reporter

Production of domestic autos in March dropped to a three-year low for that month because of cutbacks and the Easter holiday.

The total output of 667,262 cars was the lowest for March since the 589,394 assembled in 1983. It was also the lowest for any month since last December.

The March build was 5.04 percent below February's 702,698 and 10.73 percent below the year-ago month's 747,433.

Last week's targeted production of 135,224 cars was 2.34 percent more than the previous week's 132,138. The past two weeks were four-day work weeks.

Last week's total was 1.78 percent below the year-ago week's 137,670.

The manufacturers shared last week's scheduled production as follows: General Motors, 54.83 percent; Ford Motor Co., 24.64 percent; Chrysler Corp., 14.57 percent; Honda of America Mfg. Co., 2.51 percent; New United Motor Mfg., Inc., 2.27 percent, and Volkswagen of America, 1.18 percent.

Nissan Motor Mfg. Co., U.S.A., shut down its car-assembly line in Smyrna, Tenn., last week.

The production halt, which will last about four months, is to retool in preparation for the Sentra four-door sedan.

American Motors' Kenosha plant remained idle last week for inventory adjustment.

GM announced that it will drop one of the two shifts at its Arlington (Tex.) plant, which assembles the Chevrolet Monte Carlo and Oldsmobile Cutlass Supreme. The cutback is effective April 14.

Production of the Chevrolet Camaro and the Pontiac Firebird at GM's Van Nuys (Calif.) plant will also be reduced from two shifts to one, effective June 9.

GM also said it will reduce output of the Chevrolet Corvette at Bowling Green, Ky., effective April 14.

One shift will be dropped at that plant, and six units an hour will be added to the remaining shift.

GM's Fiero plant in Pontiac will cut production of that model by eight units per hour on each of its two shifts, effective April 28.

The cutbacks at GM, to adjust inventories, will result in 4,700 indefinite layoffs, the company said.

Overtime was slated at Ford's Wayne (Mich.) plant Saturday (April 5).

Ford scheduled overtime Saturday (April 12) at its Wixom (Mich.) and Atlanta plants.

Chrysler slated Saturday (April 5) overtime at its St. Louis (No. 2) plant.

The same plant is scheduled for daily overtime this week (April 7).

MAP factory ready to roll

General Motors' much-bugled factory of the future will start up in 1987 in Saginaw, Mich.

However, the first application of manufacturing automation protocol (MAP), a machine-to-machine communications system GM calls absolutely essential to the success of such a plant, will be up and running next month some 500 miles to the south at the Corvette plant in Bowling Green, Ky.

Automation still is the biggest thing in manufacturing today and, in automation, the big thing is MAP, which first appeared as a GM cause in 1982.

By mid-1985, it had been picked up by the other auto makers and their suppliers. They say that without MAP, which is still being developed, automated machines in a factory would create islands of automation with a resulting loss of effectiveness.

At Bowling Green, 62 robots are being installed to build chassis, work that previously was done manually. Fifty of those robots will do spot welding, six will do arc welding—an unusual job for robots because it is hard to automate—and six will do wire brushing of the arc welds.

Asea Robotics, Inc., based in New Berlin, Wis., and part of the Swedish Asea Group, is the supplier of the robots and a product called MAP network interface adapter.

"The plant will become the first to use a MAP network in production," said Charles Tur, vice president, robotic systems.

GM has told machinery suppliers that if they plan to keep doing business with GM, their products must be compatible with MAP.

Truck production slips in March to 3-year low

U.S. truck production for March—289,001 units—was 2.18 percent below February's 295,452 and 1.86 percent less than the year-ago month's 294,486.

Last month's build was the lowest for March since 1983, when 217,957 trucks were assembled.

Last week's scheduled production of 58,860 trucks was 1.57 percent below the previous week's 59,801.

The past two weeks were four-day work weeks, due to the Easter holiday.

Last week's build was 7.50 percent more than the year-ago week's 54,751 (also a holiday week).

So far this year, 943,248 trucks have been assembled, 3.54 percent more than the 911,012 completed last year at this point.

General Motors announced it will increase production of heavy-duty trucks at its Pontiac plant from five to six units per hour, effective May 5.

Beginning April 1, production of special commercial and recreational-vehicle chassis at GM's Detroit plant was increased by two units per hour.

Saturday (April 5) overtime was slated at the following GM plants: Janesville, Wis.; St. Louis; Baltimore; Flint, and Detroit.

Ford's Twin Cities plant was also scheduled for Saturday overtime.

Ford has scheduled Saturday (April 12) overtime at that plant and at Norfolk.

Canada notches gains in March vehicle output

Canadian vehicle makers reported production gains last month.

Auto production in March was the highest of any month since last November.

Last month's output of 98,492 cars was 10.95 percent more than February's 88,772 and 22.21 percent better than the year-ago month's 80,595.

Truck makers built 79,419 vehicles in March, 4.39 percent more than February's 76,081 and 1.62 percent above the year-ago month's 78,154.

Last week's estimated output of 25,670 cars was 25.80 percent more than the previous week's 20,405 (a holiday week).

Last week's build was 58.39 percent more than the year-ago week's 16,207 (also a holiday week).

Scheduled output of 19,428 trucks last week was 19.36 percent more than the previous week's 16,277.

Last week's targeted production was 42.45 percent more than the year-ago week's 13,638.

Key concern at TRX-86 is survival

By Joseph Bohn
Truck Editor

ANAHEIM, Calif.—TRX-86, the American Truck Dealers' 23rd annual convention, is in session here, and survival has become a paramount concern for many participants.

The convention began last Saturday. It ends tomorrow.

This year's issues are complex and vital. But the industry's resiliency is expected to carry it through to a strong, solid future.

Dealers and manufacturers are wrestling with declining demand, escalating competition and cross-currents of legislative, technological and economic changes.

Class 8 heavy-truck sales are expected to decline 5 to 15 percent this year from 1985's 133,500 level, and some downturn in Class 6-7's 145,300 sales is also anticipated.

The decline comes at a time when six new foreign competitors have entered the market, exacerbating the oversupply of product and manufacturing capacity.

The customer base also has been shrinking and shifting, as Peter E. Rupp, president and chief executive officer of Freightliner Corp., pointed out.

The emergence of larger fleets and leasing companies has stiffened competition in the user end. Since 1980, carriers accounting for 25 percent of general U.S. freight revenues have gone out of business.

Product liability costs are skyrocketing. The economy's shift from manufacturing goods to providing services has led to lower fleet activity and equipment utilization. And significantly extended truck replacement cycles are dampening demand.

The growth of intermodal transportation and new legislative proposals also pose constant threats to the industry.

For example, Senator Bob Packwood, Oregon Republican, recently proposed a bill that

AMC plant is opposed by Renault

By Richard Johnson
Detroit Reporter

Renault officials in France are strongly resisting American Motors' plan to build a new assembly plant in North America, sources say.

As a result, AMC executives are reportedly trying to package a deal more attractive to Renault's board of directors and top officials —essentially by focusing on a new Jeep plant rather than on a car plant.

There are also signs that AMC may be reconsidering its decision to close the Kenosha plant after Alliance and Encore are phased out in 1989.

According to sources with ties to the Renault board of directors, AMC has been unable to convince the French auto maker to back plans for a new assembly plant in the U.S. At the Renault board meeting in March, President Georges Besse reportedly vowed that there would be no new North American plant once the Bramalea (Ont.) plant is completed in 1987.

The State of Wisconsin's proposal to attract a highly-automated new assembly facility to replace Kenosha and possibly also the Toledo Jeep works, hinges on a financial commitment from Renault, which owns 46.1 percent of the

Sales slowdown inflates car inventory

By Kathy Boyer
Detroit Reporter

The March sales slowdown boosted the number of new domestic cars in dealer and factory inventories to 1,906,998 on April 1, the highest total since Aug. 1, 1979, when the count was 2,026,-294.

Production dropped in March, but sales declined even more, resulting in a larger stockpile. Unless the spring sales pickup materializes, more production cuts could be in the offing.

That April figure represented a 76-day supply of cars—the highest since Dec. 1, when a 78-day supply was reported.

The April 1 inventory was up from 1,867,265 a month earlier. It was in sharp contrast to the situation a year ago, when the April 1 number was 1,572,998.

The 76-day supply compared with 73 a month earlier and 53 on April 1, 1985.

General Motors, American Motors and Volkswagen experienced increases in days' supply during March. All three have cut production in efforts to make their stockpiles more manageable.

The April 1 inventories were split this way: GM, 61.06 percent; Ford Motor Co., 19.36 percent; Chrysler Corp., 16.25 percent; American Motors, 1.81 percent; Volkswagen, 1.00 percent; Nissan, 0.28 percent, and Honda, 0.24 percent.

One month earlier, the split was: GM, 61.03 percent; Ford, 19.16 percent; Chrysler, 16.21 percent; American Motors, 1.88 percent; Volkswagen, 1.02 percent; Honda, 0.35 percent, and Nissan, 0.35 percent.

The shares by size class on April 1 were: Subcompact, 17.01 percent; compact, 22.09 percent; intermediate, 38.08; standard, 13.04, and luxury, 9.78.

On March 1, the percentages were: Subcompact, 16.97 percent; compact, 22.15 percent; intermediate, 37.25 percent; standard, 13.29 percent, and luxury, 10.34 percent.

The month opened with a 69-day supply of subcompacts. Days' supply by nameplate were: Accord, 8; Sentra, 19; Escort, 51; Chevette, 57; Lynx, 61; Horizon, 65; Omni, 66; Golf/GTI, 80; Pontiac 1000, 80; Turismo, 97; Daytona, 98; Charger, 103; Alliance, 118; Nova, 145; Fiero, 155; Laser, 156, and Encore, 229.

There was an 80-day supply of compacts: Mustang, 61; Tempo, 62; Topaz, 67; Firebird, 71; Reliant, 79; Cavalier, 81; Aries, 82; Camaro, 88; Cimarron, 91; LeBaron, 93; Sunbird, 102; Skyhawk, 104; Capri, 119; Firenza, 128, and Eagle 136.

The 81-day supply of intermediates was shared this way:

Magna—a unique heavyweight in tough world of auto parts

Richard Johnson
Detroit Reporter

Searching for excellence?

Magna International, the storied, vastly diversified Toronto-area "super-supplier" believes it has found it in the form of a unique corporate culture.

More than a byword, buzzword or catch-phrase, Magna officials say their culture—and Magna's profit-sharing, pensionless compensation system—has encouraged the entrepreneurial spirit.

Magna, they say, is teeming with go-to-it type managers and employes working in dozens of small, non-union companies and honed to a sharp edge by tough intramural competition.

It is a decentralized corporation whose day-to-day affairs are overseen by a youthful triumvirate, while a sage founder, chairman and CEO named Frank Stronach—reportedly the highest paid executive in the Canadian auto industry last year—tends to broad, philosophical concerns.

Many of the key operating group and divisional managers are not products of prestigious business schools, but rather European tool and die shops.

The company is anchored by a corporate constitution that spells out objectives in unmistakably clear language. Yet Magna, with its more than 7,500 employes, is a quiet company: Relentless but low-key. One for the corporate anthropologists.

The first thing an anthropologist would study is the bottom line. Net income was $43.19 million (Canadian) in 1985, up 37 percent over the previous year.

Magna's Silicon Valley-style growth curve resembles more a maker of computer chips than car parts. Since 1980, sales have risen from just over $150 million annually to $1 billion—the objective Magna may well achieve for the fiscal year which ends July 30. And Magna expects to continue growing by annual

Extended versions of Chrysler's minivans will go on sale in the middle of the 1987 model year. The stretched versions' wheelbase is seven inches longer than current models; they are 14.6 inches longer overall.

Will Iacocca run? Editors left guessing

By Helen Kahn
Washington Bureau Chief

WASHINGTON—Lee Iacocca's latest sally into Washington had the American Society of Newspaper Editors laughing along but still wondering whether he really will be a serious candidate for President.

The Chrysler Corp. chairman began and ended his speech with teasing remarks about whether he will or will not run for President—leaving the center free for the usual remarks.

But it was the political talk that garnered the most interest. Although Iacocca said he is not "running for anything except maybe my life," he never quite disavowed the job.

He said that Joseph Califano, Secretary of Health, Education and Welfare under President Johnson and now a Chrysler director, had told him he had the "right stuff to be President because I have the ability to read two cards without moving my eyes"—a reference to President Reagan's use of 3x5 cards.

He also joked that his "personal choice" for running mate is Dr. Ruth Westheimer—the noted TV sex specialist—because "I can tell her what to do and she can tell everybody how to do it!"

Finally, Iacocca said it had taken him 40 years to learn the car business and "I can't switch from brain surgery to being a chiropodist or whatever."

But after disqualifying himself as "no politician," he added that just a night earlier, a Chicago audience had told him that was why they wanted him.

Aside from the political concerns, Iacocca touched on the need for a gasoline tax of 25 cents per gallon or 15 cents plus a $5 fee on each barrel of imported oil, either of which would bring in $25 billion a year.

He also discussed the need to hold the line on CAFE standards, lest General Motors and Ford Motor Co. reap a windfall of $750 million, to the detriment of the taxpayers and the budget.

He spoke of the need for a "level playing field" with the Japanese (although the dollar/yen ratio is better) and the need for low interest rates to continue.

Iacocca said he is not "dancing in the street" although Chrysler's first quarter profits (to be announced this week) are "very good."

$1,000 price hike by Japanese is a possibility, Iacocca says

By Mary Connelly
Detroit Reporter

Japanese auto manufacturers will be forced to raise prices, possibly as much $1,000, in the next six months to offset the strengthening of the yen against the U.S. dollar, Chrysler Corp. Chairman Lee A. Iacocca predicted last week.

Speaking in Chicago as part of a 10-city tour to preview upcoming models, Iacocca said, "I'm still waiting for the full price increase from that stronger yen. I believe they will have to make some adjustment in the next six months, maybe up to another $1,000 increase."

Iacocca said Japanese makers have raised prices an average of $1,025 in the last six months.

"Historically, they've usually priced to accommodate about 70 percent of any change in currency over time," he said. "The yen has already gotten 30 percent stronger but they've added only 10 percent to the stickers. They owe us about another 10 percent and another grand."

Iacocca also said he is "befuddled" by General Motors' 2.9 percent price hike in a "sluggish market." The increase is effective today (April 14).

"It could be one of those classic cases of raising prices and then offsetting it with a massive financing or incentive program," he said. "So we've got to keep our powder dry."

Iacocca last week also reminded UAW workers at Chrysler's Belvidere (Ill.) assembly plant that they face a Monday (April 14) deadline in reaching a so-called progressive labor contract to assure the plant's future.

Chrysler is seeking streamlined work rules and a reduction in the 120 production classifications at the plant in an effort to boost productivity and efficiency. Iacocca said savings would be "substantial."

"There ain't any more cushy jobs in this country," he said. "You either want to compete or don't want to compete. With outdated work rules that raise your costs and often affect your quality, then you take the next ship east, Far East that is."

The two sides have been talking since January when the company said it would produce its 1988 full-sized, front-wheel-drive C-body models at the plant if the union agreed within 90 days to a labor agreement patterned after the contract at its Sterling Heights (Mich.) plant. The C-cars will replace Chrysler's current rear-drive cars.

Please turn to Page 66, Col. 4

Chrysler hikes import prices

Chrysler Corp. last week raised the prices of the imported Mitsubishi cars that are sold by Dodge and Plymouth dealers.

The increase averaged 3.9 percent and amounted to $295 on Colt sedans and hatchbacks, $422 on the Colt Vista wagon and $97 on the sporty Conquest hatchback.

The base Colt hatchback went up $214 and now is $5,847. Other Colt hatchbacks and sedans rose $314-$316. The top model is the Premier four-door sedan at $8,209.

The Conquest was hiked $97, to $13,837, and the Vista boosts were $421 on the two-wheel-drive version and $422 on the 4WD unit. Prices are $9,799 with 2WD and $10,924 with 4WD.

Since the 1986 model year began, Colt prices have risen an average of $686, or 10.89 percent. The Conquest is up $1,273, or 10.13 percent, and the Vista models have climbed an average of $1,097, or 11.83 percent.

Chrysler attributed last week's hike to increases by Mitsubishi due to appreciation of the Japanese yen. There were no changes in destination charges or dealer discounts last week.

Industry wins round on depreciation

By Geoff Sundstrom
Washington Reporter

WASHINGTON—In a victory for auto industry lobbyists, the Senate Finance Committee last week decided to adopt a three-year depreciation period for passenger cars and light trucks used for business purposes.

The committee's original tax-reform package called for a five-year depreciation schedule.

The victory is not complete, however, because lawmakers adopted straight-line depreciation for those vehicles rather than the 150 percent depreciation in three years in the current law.

Increasing the time it takes to depreciate a vehicle could cause major dislocations in the automotive market, industry representatives told the committee.

If it takes longer to recover vehicle investments, many businessmen might put off buying replacement units. Others could turn to vehicle leasing. Those actions have huge significance for the auto industry because one out of every three cars sold in the U.S. is sold to a business firm, the committee was told.

Industry representatives argued that the five-year writeoff did not reflect the average useful life of business vehicles. They said that higher mileage accumulated over a shorter period of time causes business vehicles to depreciate at a faster rate than private autos.

The committee agreed by voting 15-5 to accept the three-year schedule. That was coupled, however, with straight line depreciation, a method that would restrict writeoffs to 100 percent of a vehicle's value distributed evenly over the three years.

Despite the Finance Committee's action last week, there may be a delay in getting the tax bill to the Senate floor. By a 72-24 vote, the Senate approved a resolution suggesting that there be a budget agreement between the President and Congress before tax reform is considered.

The committee also voted last week to create a separate depreciation schedule for heavy-duty trucks, divided into productive and non-productive classes. Under the committee's plan all heavy-duty vehicles can be depre-

Tax reformers would help leasing

By Geoff Sundstrom
Washington Reporter

WASHINGTON—If Senate tax reformers have their way, leasing a new car will become increasingly attractive to potential buyers.

Dealers will not like the proposed tax changes, however, since the cost of car ownership will increase, which might affect sales.

According to NADA, the cost of car ownership will increase if two proposals of the Senate Finance Committee are adopted. One would limit the interest deduction for federal income tax to $2,000, and the other would eliminate the deduction for state sales taxes. There is no limit on interest deductions now.

The proposals are part of the Senate tax-reform package. NADA said they would result in higher prices for vehicles because tax benefits now available to car buyers would be lost.

On the other hand, persons who lease a vehicle might not incur those higher costs. Some leasing companies are in a better position than individual buyers to absorb the increased costs from tax reform and might not pass them on to customers.

According to NADA, eliminating the state sales-tax deduction would be equivalent to a $210 price increase on a $12,000 car bought by a taxpayer in the 35 percent bracket who lives in a state with a 5 percent sales tax.

NADA said that during their first year of car ownership, a second price increase of $300 to $400 would also result for many buyers whose interest deductions exceed $2,000.

That increase would be in the form of nondeductible interest and would continue at diminishing levels each year throughout the life of the loan.

Though the $2,000 ceiling for interest deductions would not present a problem to many individuals, the cap would penalize businesses, which buy one out of every three cars sold.

According to John Fitch, executive director of the American Automotive Leasing Assn., car buyers may turn to leasing as a way to escape those penalties. He said that would be especially true in the case of persons planning to acquire business vehicles.

Those who find themselves above the allowable ceiling on interest deductions will be looking for ways to reduce interest expenses, he said. Switching to vehicle leasing would be an attractive way for many businesses and individuals to reduce nondeductible interest costs, he said.

John Deere to cast engine blocks for GM

By Dave Zoia
Detroit Reporter

Deere & Co. has won a bid to supply 4-cylinder engine blocks to General Motors for 1987-88 N-body cars. It is a multimillion-dollar contract that hits hardest at GM's own Central Foundry Division.

Deere confirmed last week that it has begun producing blocks for the shortened version of GM's 2.5-liter, 4-cylinder engine, which is assembled at the Chevrolet-Pontiac-Canada Group plant in Pontiac. The short 2.5 is used solely in GM's N-body cars—Pontiac Grand Am, Oldsmobile Calais and Buick Somerset/Skylark.

Deere may supply up to 1,600 blocks daily, according to reports.

On the losing end is Central Foundry, which had provided the blocks for the Pontiac engine. Neither Central Foundry nor CPC would comment on the switch in sourcing.

Deere, which will supply the auto maker from its highly automated foundry in Waterloo, Ia., said it netted the GM contract mainly on cost and quality.

"GM looked for three things in considering our bid," said a Deere spokesman. "We had to have proper metallurgical control and proper dimensional control in producing the castings.

"Third, we are the only company in the world that has developed and patented the 'Polyloc'

ATD names Howard top dealer

Gary L. Howard, president of Fresno Truck Center, Fresno, Calif., won NADA's 1986 Truck Dealer of the Year award.

The award, sponsored by Business Week, was presented at the NADA American Truck Dealers Division's 23rd annual convention in Anaheim, Calif.

Howard's Fresno Truck Center retailed 184 Freightliner and 19 White trucks in 1984—a 204-unit total that gave it a 56.4-percent share of the local market.

The dealership has held a 45- to 50-percent market share in Central California for 10 years.

A major truck dealer for 20 years, Howard was Freightliner's National Dealer of the Year in 1979 and Western Dealer of the Year in 1982, 1983 and 1984. He also was White Motor's Western Dealer of the Year for six consecutive years from 1973 to 1978.

He also operates several other dealerships, retailing Freightliner, White and Western Star at Bakersfield Truck Center, Bakersfield, Calif.; GMC, Western Star and Iveco at Central Valley GMC, Fresno, and Freightliner and Isuzu at Golden Gate Truck Center, Oakland.

Larry L. Howard

Volvo launches new FE Series

GREENSBORO, N.C.—Volvo White is launching a new line of distribution trucks and tractors for the food, beverage, air-freight and other key regional and local distribution markets.

Known as the Volvo FE Series, the new trucks are being introduced to dealers this week.

They are designed specifically for urban congestion, gridlock and other city traffic conditions, and also for regional transportation where fuel economy and highway speed are important.

Volvo expects to retail 2,000 of the new units from April through December, 1986.

It expects to retail just under 2,700 carryover and brand new FE6 and 7 models during 12 months of calendar 1986, according to officials.

Frank Roehrig, product manager at Volvo White, said the new trucks feature more interior space, a 20-percent increase in window area and more fuel economy than any of the firm's previous distribution trucks.

The vehicles also have increased maneuverability and engine durability.

The FE's cab, produced at Volvo's new facility in Umea, Sweden, uses galvanized steel to ward off rust and corrosion.

Driver entry and exit is improved with a staircase of low and wide non-slip steps and two well-positioned grab handles.

A low floor height and a wide 90-degree door opening further enhance ingress and egress.

A front spoiler, increased windshield rake and rounded corners improve the FE cab's aerodynamics.

The FE cab has a powerful heating and ventilation system. To avoid drafts, treated air is distributed at low velocity through 19 nozzles in the cab. A filter traps dust or pollen before it enters the cab.

All daily servicing points, including the battery box, are easily accessible around the cab.

The FE series is powered by new TD61 and TD71 engines with air-to-air intercoolers. They include features like heavy-duty cylinder blocks, drop-forged and nitrocarbonized crankshafts, new-generation turbocharger and gear-driven water pumps.

Both engines are designed for increased fuel economy, reliability, durability and performance.

The FE series features a new rear axle and suspension system. A choice of different springs improves performance for different applications. An anti-roll bar is standard.

FE models come with either a 12,000 or 10,000-pound front axle for increased payload. Tapered king pins with bearings are fully adjustable. The FE's ride is improved with springs with shackles and rubber bushings and by standard front shock absorbers.

The 48-degree wheel cut provides good maneuverability. Integral power-assist steering is standard.

The trucks feature a full air dual circuit brake system, designed for increased reliability and maintenance; a new foot brake valve for improved reliability, and a new gear-driven air compressor for longer service life. The compressor requires no belts.

All-new FE frames are constructed of high-tensile-strength material with more section modules.

Their lower weight increases payload capacity.

The frame is 34 inches wide, a

New Volvo FE—more roominess, visibility

Higher output, galvanized cab in tractor series

Volvo offers new engines in FE series

GREENSBORO, N.C.—Volvo has developed new 6-liter and 7-liter turbocharged diesel engines for its FE truck series.

The TD61 and TD71 engines with air-to-air intercooler reduce maintenance costs by offering access to all components, including inspection and fill points, filters, valves and timing.

Both the gear-driven water pump and crankshaft-driven cooling fan do away with belts.

The new 205-HP TD61F 6-liter engine is intercooled, while the 174-HP engine on the two lightest FE6 truck models remains non-intercooled.

They are all 6-cylinder, in-line, 4-stroke engines, equipped with an oil cooler and full-flow and bypass oil filters as well as two pressure line fuel filters.

They also have a built-in electrical preheater for intake air, designed to assure easy cold weather starting.

Engine durability is enhanced by heavy-duty cylinder blocks. The crankshaft is drop-forged and nitrocarbonized for higher strength and longer life.

Two separate cylinder heads use more bolts for improved sealing and combustion.

New fuel-injection equipment, including pump and four nozzle injectors, improve combustion and economy.

A redesigned combustion chamber, improved cylinder temperature control and improved cooling system also increase economy.

A new oil pump, lubrication and new intake manifold improve performance.

truck industry news

Truck sales drop 5 pct. in March

By Joseph Bohn
Truck Editor

Truck manufacturers retailed 400,543 trucks in March, off 4.8 percent from 420,909 in March, 1985.

Sales in all segments were down.

Light-duty sales of 378,057 were off from 395,361 a year earlier.

Within the light segment, Ford sales of 105,787 were off from 117,729 last March; Chevrolet sales of 100,289 were down from 111,170; Chrysler sales of 49,102 were down from 61,899, and GMC

Table on Page 20

sales of 25,138 were off from 26,366.

Jeep, with record sales of 13,806, was up from 12,375. The imports, with record sales of 83,935, were up from 65,822 in March, 1985.

Nissan's resurgence was a big factor, sparking the import increase. Nissan sales were up after being down the two previous months.

Ford retailed a total of 111,066 light, medium and heavy trucks in March, off from 122,538 last year. Chevrolet retailed a total of 102,059 trucks, off from 112,716. And GMC retailed a total of 28,984, off from 30,005.

Medium-duty sales of 3,941 were off from 4,507 in March, 1985. Within the segment, Class 5 sales of 414 were up from 235 a year ago; while Class 6 sales of 3,527 were down from 4,272 last year, according to preliminary MVMA reports. No sales of Class 4 trucks were reported.

Heavy-truck sales of 18,545 in March were off from 21,041 a year ago.

They included Class 7 sales of 9,004, up from 8,017, and Class 8 sales of 9,541, off from 13,024 a year earlier.

Meanwhile, first-quarter sales of 1,094,418 were off from 1,154,828 in like 1985.

Light-duty sales of 1,034,478 were down from 1,087,826 in the first quarter of 1985.

Ford light-duty sales of 293,297 were off from 312,113.

Chevrolet sales of 283,187 were off from 307,412.

Chrysler sales of 129,115 were off from 160,914.

GMC sales of 71,558 were off from 73,845.

Jeep sales were a record 47,166, up from 38,179.

The imports had record sales of 210,155, up from 195,363.

In total, first-quarter Ford sales of 305,781 were off from 326,165 a year earlier.

Chevrolet's total sales of 287,944 were off from 311,960. And GMC's total of 81,924 was off from 82,850.

Medium-duty sales of 10,909 in the quarter were off from 12,423 a year ago.

Heavy truck sales of 49,031 were off from 54,579.

They included Class 7 sales of 23,304, up from 21,620 last year, and Class 8 sales of 25,727, off from 32,959 in the first quarter of 1985.

truck personnel

Downham adds sales, service jobs at DDA

Donavon F. Downham has been appointed general director, planning, marketing, sales and service for Detroit Diesel Allison Division.

Donavon F. Downham

He was previously general director of marketing and planning and picked up responsibility for sales and service from **Alvin B. Goodspeed,** who retired April 1. Downham has been with General Motors since 1954.

Blumenstein heads Rockwell axle sales

Rockwell International's Automotive Operations appointed **David C. Blumenstein** vice president, sales/marketing and government products of its On-Highway Axle Division.

In addition to sales and marketing of the division's products, he is also responsible for sales, engineering and service parts for Automotive's government products.

Rockwell also named **Robert J. Sitler** vice president, customer relations, for the On-Highway Axle Division. He is responsible for developing and maintaining relationships with Rockwell's major axle customers.

J.F. Kent Darragh was named general manager, Service Parts Division. Darragh is responsible for sales, marketing and operations in the service parts business.

Snyder named head of Cummins Southwest

W. Patrick Snyder has been named president of Cummins Southwest, Inc., the Phoenix distributor for Cummins Engine Co.

Snyder, previously vice president and general manager—Worldwide Operations for Cummins, succeeds **Charles Martin,** a former Cummins officer, who retired.

Mack names Rhoads head of powertrains

Mack Trucks named **Ross H. Rhoads** general manager-Powertrain Operations.

General manager—service products since 1981, Rhoads assumed responsibility for all production at Mack's Hagerstown (Md.) facility.

Fruehauf names Glazer head of LBT Division

Fruehauf Corp. promoted **Richard S. Glazer** to vice president-general manager of its Liquid & Bulk (LBT) Division.

A 25-year Fruehauf veteran, Glazer succeeds **Leon Alexander,** who earlier was promoted to direct Fruehauf's trailer operations group in Detroit.

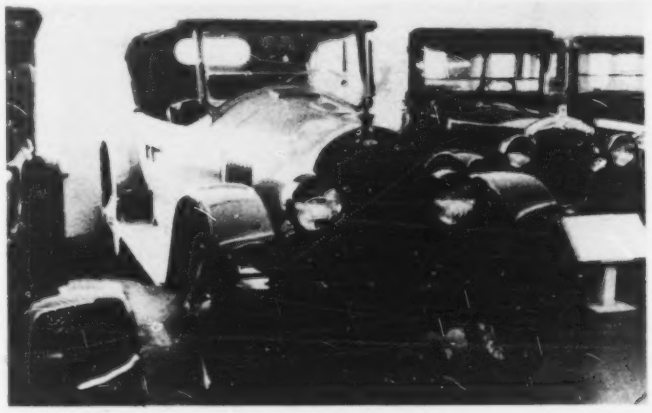
Antitheft device is geared to specific markets

ELK GROVE, Ill.—MaxiGuard of America is adopting a new marketing strategy for its car-security components to reach auto dealers in specific markets.

The company said its line has been repackaged and refined to meet the security needs of particular areas while qualifying for the highest insurance discounts.

The first line is called the New Yorker and is tailored to the New York and New Jersey markets. In the near future, MaxiGuard will market kits aimed at the California and Boston markets.

The New Yorker package features a deadbolt hoodlock and automatic engine disabling device. MaxiGuard said the New Yorker kit was developed after extensive research with local car dealers and their customers.



Apperson's car comes to Auburn

Edmond Orser, of Billings, Mont., donated a 1920 Apperson 8-21 four-passenger Sportster to the Auburn-Cord-Duesenberg Museum, Auburn, Ind. The 8-cylinder car was driven until 1925 by Edgar Apperson, founder of Apperson Brothers Automobile Co., Kokomo, Ind. This Apperson Sportster was a rolling test lab for mechanical features under development for the Apperson line.

Volvo offers FE truck line

Continued from Page 12

standard size, for easy body mounting and transfer.

The constant profile, straight rail design with completely clean upper frame is designed for easy modification.

FE's chassis comes with standard premium, tubeless radial tires. Air tanks are remote from the frame rails. The chassis also comes with large fuel tanks.

The FE offers a choice of gearboxes—a S5-35 five-speed on the FE16/FE613H and six-speed on the FE614T and FE615. The FE7 models come with the Volvo R52 range-type eight-speed transmission.

The FE613 with 10,000-pound front axle and 18,000-pound rear axle has a 28,500-pound GVW/Gross Combined Weight (GCW). The TD61GE engine provides 174 HP; maximum torque is 388 pounds-feet.

The FE613H model has a 10,000-pound front axle and 20,000-pound rear axle for GVW/GCW of 30,000 pounds. Equipped with the 174-HP TD61GE engine, maximum torque is 388 pounds-feet.

The FE614T has a 10,000-pound front axle and 20,000-pound rear axle, with 55,000-pound GVW/GCW. It has 205 HP and 455 pounds-feet of torque with the TD61FB engine.

The FE615 has a 12,000-pound front axle and 20,900-pound rear axle for a 32,900-pound GVW/GCW rating and features air-to-air intercooled engine.

The FL715 has a 12,000-pound front axle and 20,900-pound rear axle for a 32,900-pound GVW/GCW. It has 230 HP and 605 pounds-feet of torque with the TD71F engine.

The FL716T has a 12,000-pound front axle and 23,000-pound rear axle and a GVW/GCW rating of 72,000 pounds.

Return of 5-MPH bumper sought

By Helen Kahn
Washington Bureau Chief

WASHINGTON—Consumers Union has asked NHTSA to reinstate the 5.0-MPH bumper-strength requirement.

If that is not done, Consumers Union wants NHTSA to "at least require each car maker to tell consumers, at the point of purchase, what the average cost would be to repair bumper damage."

CU also wants the consumer to have an idea of insurance costs incurred because of the weakened bumper requirements.

The Reagan Administration's rollback of the bumper regulation —from 5.0 MPH to 2.5 MPH—has resulted in "tissue-paper bumpers," said Mark Silbergeld, director of CU's Washington office. "These reduced standards translate into the loss of millions of dollars to consumers in the form of higher repair bills and higher insurance premiums," he added.

The April car-buying issue of Consumer Reports (CU's main source of income) includes tests and surveys showing that repair bills have increased $146 to $1,-081 as a result of the reduced standard.

"It's also clear that insurers do take the effects of bumper performance into account in rate setting, adding to consumer costs," Silbergeld said.

In 1982, NHTSA reduced the test-impact speeds from 5 MPH for longitudinal front and rear barrier and pendulum impacts and 3 MPH for corner pendulum impacts to 2.5 MPH for front and rear longitudinal barrier and pendulum impacts and 1.5 MPH for corner pendulum impacts.

NHTSA also allowed damage to the bumper itself. At that time, NHTSA justified its action by finding a net consumer benefit somewhat under $100 per car.

In asking for a return to higher-strength bumpers, CU also cited studies made by the Highway Loss Data Institute showing a large increase in frequency of claims and a generally higher average loss payment per insured vehicle year for cars with weakened bumpers.

CU admitted that data is not available on the incidence of collisions between 2.5 MPH and 5.0 MPH and those involving corner impacts between 1.5 MPH and 3.0 MPH. "Nor is data available separating insurance costs attributable directly to bumper impact resistance from other factors used to determine auto insurance premiums," CU said.

Nonetheless, according to CU, it is clear that lowering the bumper regulations has meant higher insurance costs for "some substantial portion" of car owners.

If the agency fails to upgrade its regulation, CU said, it should at least see that the car buyer is informed.

In addition, CU said, NHTSA should carry out the mandate given it by Congress in the 1972 Consumer Information and Cost Savings Act. That law required the government by Feb. 1, 1975, to set procedures requiring auto dealers to give prospective buyers data developed by NHTSA comparing the differences in insurance costs for various makes and models of cars based on differences in damage susceptibility and crashworthiness.

CU said NHTSA has not done that.

In its petition to NHTSA, CU spelled out how the agency should prepare and test vehicles for the restored regulation if NHTSA takes that route. CU also listed procedures for the agency if it chooses the consumer information route.

Import-car registrations set record for January

By Jenny L. King
Detroit Reporter

Imported cars, definitely on a roll with one outstanding sales month following another, notched a registrations record in January and claimed 30.39 percent of the total market for the month.

New import registrations, according to R.L. Polk & Co., reached a high of 277,405 to open the year, up 34.91 percent from 205,621 in January, 1985. Their market share was 30.39 percent, up from 26.32 percent.

Record January penetration for imports was 31.21 percent in 1982.

Japanese-built passenger cars claimed 72.46 percent of the import total, up from 72.03 percent a year earlier.

Cars from West Germany had 12.72 percent of the total, down from 13.50 percent. U.S.-assembled imports (Volkswagen Golf, Honda Accord and Nissan Sentra) represented 8.32 percent, up from 7.28 percent, and Swedish-built cars had 4.31 percent, down from 5.21 percent.

Registrations by country of origin were as follows:

	Jan. 1986	Jan. 1985
Japan	201,011	148,128
W. Germany	35,274	27,761
United States	23,068	14,976
Sweden	11,969	10,704
Yugoslavia	2,275	0
Britain	1,921	1,562
France	1,438	2,062
Italy	449	428
TOTAL	277,405	205,621

Registrations of imported light trucks were up 10.66 percent January to January, climbing to 78,-426 from 70,873. Numbers from the major makers included:

	Jan. 1986	Jan. 1985
Toyota	33,486	27,001
Nissan	14,784	20,520
Mazda	10,045	8,452
Isuzu	6,972	—
Dodge Ram	—	5,121
Others	13,139	9,779
TOTAL	78,426	70,873

Don't get hung up looking for keys.

You might lose a sale.

If you're losing sales while your sales staff is hunting for keys, let Supra get you off the hook with Supra MAX.™ It keeps your sales staff on the lot selling, and it keeps your vehicles secure.

With the Supra MAX, your key remains safely with the vehicle. Only our Title® key can open the Supra MAX. And locksmiths are not equipped to duplicate Title keys. This one-key system eliminates losses, duplications, and confusing key boards. It's also the toughest and most durable automotive key box on the market.

So if you want the best key boxes made, give us a call about the Supra MAX and our other styles of auto key boxes. They'll keep your sales staff on the lot selling.

SUPRA
WE OPEN DOORS FOR YOU.

AUTOCAP cases in North Carolina double in 1985

RALEIGH N.C.—AUTOCAP handled some 350 complaints in North Carolina in 1985, about 170 more than in the previous year, according to the North Carolina Automobile Dealers Assn.

Many of the 350 complaints were referred to other mediation programs, the association said. Some were settled by the AUTOCAP staff and a few went on to be heard by the mediation panel, consisting of an equal number of consumers and dealers.

Of the 125 cases resolved by AUTOCAP, consumers won 26 percent, dealers were upheld in 27 percent and compromise was reached in 36 percent of the cases. Some cases are still pending.

Missouri makes no bones; it wants auto business

KANSAS CITY—Forty automotive industry suppliers from as far away as Canada and Mexico met in Missouri and were told the state wants their business.

The suppliers met at General Motors' Leeds assembly plant outside Kansas City and heard Missouri Gov. John Ashcroft say the state will strive to become a leader in the manufacture of automobile parts and supplies to complement its status as the fastest growing automobile producer in the country.

"We will continue to be aggressive in our efforts to attract this kind of industry to our state," Ashcroft told the group.

"Missouri is No. 2 in the country in automobile production and last year was the No. 1 state in automobile production growth. We intend to defend those positions by getting the word out on what Missouri has to offer."

Ashcroft spoke at a "Meet Our Suppliers Day" at the Leeds plant, an event designed to bring together automotive parts industry personnel and plant workers.

Ashcroft said Missouri is the best place for suppliers to do business because the state is at the center of an excellent transportation network that makes on-time delivery possible.

"A location in our state," Ashcroft said, "puts suppliers near the largest, most concentrated auto assembly industry in the Midwest."

A recent report, based on studies conducted by the federal Advisory Commission on Intergovernmental Relations, rated Missouri as having the nation's best business climate. Ashcroft said that puts Missouri ahead of 11 states in the region that he calls the "new Midwest."

As the nation's second-largest automobile producer, Missouri accounts for nearly 14 percent of total U.S. auto production.

DeTomaso lists higher profit on increased sales

RED BANK, N.J.—DeTomaso Industries, Inc., reported consolidated net income of $3,526,26 on sales of $213,046,246 in 1985, compared with net profit of $1,079,279 on sales of $207,893,694 a year earlier.

Through its consolidated Italian subsidiaries, DeTomaso manufactures Maserati luxury cars, Innocenti minicars and Motor Guzzi and Benelli motorcycles. Through a U.S. subsidiary, it distributes Maserati, Moto Guzzi and Benelli.

Alejandro DeTomaso, president, attributed 1985's improved performance principally to the inclusion of Maserati's results in the company's 1985 consolidated figures.

DeTomaso said negotiations are continuing with Chrysler Corp. relating to increasing the volume of sport coupe production, the production of a second automobile and an increase in Chrysler's 3.5-percent stake in Maserati.

French can buy used cars from computer listing

PARIS—The question may become: "Would you buy a used car from this computer?"

The question is already appropriate in France, according to Georges Nahon, managing director of Intelmatique, the worldwide marketing and promotion arm of the French Telecommunications Administration.

"One of the new interactive services on France's national videotex network is a listing of used cars for sale," Nahon said. "It may be accessed around the clock from anywhere in France and from abroad via a simple telephone call using widespread Minitel terminals or any Minitelized personal computer."

The Minitel is a low-cost, small videotex terminal which is being leased or sold to businesses and distributed to telephone customers. More than a million are now in operation in French offices and homes.

The used-car database was put online in late July and handled 5,000 inquiries in its first month of operation, said Jean Denarier, project coordinator for the system operator, a company called Apex.

Potential car buyers can shop for a used model at their own convenience and save a lot of time by being able to stipulate what kind of car they want. Shoppers can use their Minitel to describe the car they want by any, or all, of six criteria: Make, model, year, mileage, region where it is available and price range.

The name and address or telephone number of the seller automatically accompanies the listing.

There is no fee for accessing the used-car database, which is essentially supported by advertising fees. It costs between $7 and $12 to list a car for three weeks.

More than 750 automobiles were listed in August, most of them less than one-year old. Those models were listed by auto manufacturers that provide cars to many of their executives and trade them in annually.

Apex also is studying the possibility of offering credit terms through the Minitel.

All of this is possible mainly because of a recently adopted French law which provides that all used cars must pass a government inspection before being sold.

C-P-C exec downplays GM layoffs

DURHAM, N.C.—Despite temporary layoff of thousands of General Motors workers recently, Gary Dickinson, GM vice president and director of engineering for the Chevrolet-Pontiac-Canada Group, said he is optimistic about GM sales.

"The layoffs were strictly because the pipeline was getting full," he said. "It is just a correction of inventory. What's exciting now is we have reduced our leadtime. From the initial idea of a car to production used to take five years. Now, we're reducing that to three years."

Another major change, he said, is that GM is getting away from cars that look alike and "later this year we're coming out with the 'L' cars, the first of our Beretta Corsica line. We'll be introducing nine models in this line between now and 1990."

He said another change GM has made to reduce leadtime is a switch to product development teams. The traditional method was to design a car, create a clay model and then move to the drawing boards, then to marketing, and so forth.

"Now," he said, "we have all these people on one team. It makes for faster and simultaneous work. Compromises can be made instantly and this has shortened the time."

Admitting that the "Japanese have done a superior job," he said, "The competition is getting tougher, but GM is not asleep. The moss is not growing under our feet."

Dickinson was in Durham to receive a distinguished alumnus award from his alma mater, Duke University's School of Engineering. His daughter, Debbie, is a freshman at Duke.

Sales slowdown pushes inventory above 1.9 million

First-quarter output off 2.5 pct.

By Kathy Boyer
Detroit Reporter

First-quarter domestic auto production of 2,128,067 units was 2.51 percent below the 2,182,936 assembled in the first quarter of 1985.

This year's build was the lowest since 1983's 1,554,324.

According to figures adjusted at the end of the quarter, 2,439,547 cars have been built so far this year, 2.80 percent below the 2,509,821 completed last year at this time.

Last week's scheduled production of 175,376 cars was 28.95 percent more than the 136,104 for the previous four-day work week.

Last week's targeted output was 3.76 percent below the year-ago week's 182,223.

Scheduled production last week was shared as follows: General Motors, 54.68 percent; Ford Motor Co., 23.81 percent; Chrysler Corp., 15.40 percent; Honda of America Mfg. Co., 2.08 percent; New United Motor Mfg., Inc., 1.75 percent; American Motors, 1.14 percent, and Volkswagen of America, 1.14 percent.

Production remains suspended at the Smyrna (Tenn.) plant of Nissan Motor Mfg. Co., U.S.A., as retooling proceeds for the Sentra four-door sedan.

After being idle for two weeks to adjust inventories, AMC's Kenosha plant resumed production April 7.

As previously reported, effective today (April 14), GM dropped one of the two shifts at its Arlington (Tex.) plant, which produces the Chevrolet Monte Carlo and Oldsmobile Cutlass Supreme.

Also effective today, GM's Bowling Green (Ky.) plant, which builds the Chevrolet Corvette, is down to one shift.

Those cutbacks brought the number of indefinite layoffs at GM to an even 15,000.

Chrysler's Sterling Heights (Mich.) plant begins a $240 million, five-week model changeover today in preparation for the new Plymouth Sundance and Dodge Shadow P-cars.

The plant, which currently produces the Dodge Lancer and Chrysler LeBaron GTS, will also produce four-door and two-door versions of the new models.

During the changeover, 3,000 employes will be on temporary layoff. The plant will resume production of LeBaron and Lancer on May 19. The first P-cars are scheduled to be assembled May 27.

Ford slated Saturday (April 12) overtime at its Wixom (Mich.) and Atlanta plants.

All Ford plants except Chicago are scheduled for daily overtime this week (April 14).

Saturday (April 19) overtime is slated at Ford's Wayne (Mich.) plant.

Truck quarter highest since 1979

U.S. truck makers reported their highest first-quarter production in seven years.

The total of 896,811 trucks, 3.77 percent more than the year-ago period's 864,265, was the best for that quarter since 1979's 1,003,218.

Truck makers assembled their one-millionth truck last Friday (April 11), five days ahead of last year.

Last week's estimated output of 73,832 units was 26.36 percent more than the previous week's build of 58,431—shortened by a holiday—and 4.25 percent better than the year-ago week's 70,825.

American Motors' Jeep plant in Toledo resumed production today (April 14) after being idle last week for inventory adjustment.

AMC said it will cut daily production of the Jeep Wagoneer and Cherokee by 110 units while adding 35 units to Comanche output.

GM scheduled overtime Saturday (April 12) at the following plants: Janesville, Wis.; Baltimore, and Detroit.

Ford slated Saturday overtime at its Louisville plant.

All Ford truck plants are scheduled for daily overtime this week.

Ford has scheduled Saturday (April 19) overtime at its Norfolk and Twin Cities plants.

Truck output in Canada sets record

Canadian truck makers achieved their best first-quarter production ever.

The makers assembled 235,769 units during the quarter, 3.47 percent more than the previous record of 227,872 which was set last year.

Last week's scheduled output of 19,430 trucks was 7.83 percent more than the previous week's 18,019 and 2.96 percent better than the year-ago week's 18,872.

The first-quarter build of 274,468 cars was 11.76 percent more than the 245,586 assembled during the year-ago period.

Last week's targeted output of 25,670 cars was 1.75 percent more than the previous week's 25,228 and 14.85 percent above the year-ago week's 22,350.

Mazda conducts workshops for suppliers in U.S.

FLAT ROCK, Mich.—Mazda Motor Mfg. (USA) Corp. has invited 42 future suppliers to attend a series of workshops at its new manufacturing facility here. The workshops will explain Mazda's production philosophy and the suppliers' role in it.

The workshops began last week and will continue through April 25. Some 600 supplier representatives are expected to attend, and Mazda plans to conduct similar workshops with other suppliers in the future.

Suppliers invited include manufacturers of electrical components, tires, wheels, glass, interior and exterior trim items, fuel system components and air conditioning. Mazda expects to sign purchase agreements within the next several months.

Opening remarks at the supplier workshop were delivered by Zensaburo Sumino, a member of the board of Mazda's parent company, Mazda Motor Corp.

"It is imperative to our success that our suppliers fully understand Mazda's production philosopy—including just-in-time delivery and cost-consciousness—as well as Mazda's approach to quality," Sumino said.

Honda's second line begins in Marysville

MARYSVILLE, Ohio—Honda of America Mfg. Co. began production last week on its second line, building 40 three-door Accords during the week.

Civic production will be added to the line in July, and by the end of the year, it is expected to be running at an annual rate of 150,000 units.

Another 150,000 four-door Accords will be built annually on the company's No. 1 line. Honda expects to add another 300 workers this year to the 3,400 it already employs at the Marysville auto operations. A Honda spokesman said the first Civics are expected to approximate the 50-percent local content level of the current Accords built in Ohio.

60th year—$50.00 per year, $1.25 per copy

Reuss plots GM's '89 strategy: Distinctive lines, few models

By Michelle Krebs
Financial Editor

The 1989 model year will see far fewer models in General Motors' product lineup, according to Lloyd Reuss, head of GM's North American automotive operations.

He said that will make it easier for dealers to sell cars and will reduce the cost and complexity of producing them.

Reuss, who recently was appointed executive vice president of GM's North American Passenger Car Groups, said that in the two months he's been in his new job, he has worked toward "deproliferating" GM's models.

"Depending on how you count them," he said in an Automotive News interview, "we have about 200 models.

"We're going to be deproliferating some of those models in our product line. The five-division car lineup in 1989 is going to have a lot fewer models than we have today. We will have more distinct divisional market segmentation and less overlap."

Reuss said he doesn't want seven different models of the same type of vehicle in one division as is the case today, for example, with GM's present J-cars —Chevrolet Cavalier, Pontiac Sunbird, Oldsmobile Firenza, Buick Skyhawk and Cadillac Cimarron.

"In our J-cars," he said, "Buick and Oldsmobile both have the two-door, the four-door, the hatchback and the wagon. You lump them all together, and they don't sell that many in total."

In future car programs that involve four or five GM divisions, a single division won't sell every version of a line. A sedan may be exclusive to one division while a hatchback may be exclusive to another.

The GM10 program will be one of the first to demonstrate the deproliferation of models. GM10 cars will replace the G-bodies—Buick Regal, Chevrolet Monte Carlo, Oldsmobile Cutlass Supreme and Pontiac Grand Prix

More trucks, no cars for a while at Smyrna

Nissan Motor Mfg. Corp., U.S.A., will hike truck output at its Smyrna (Tenn.) plant while the plant's car line is shut down to convert to fully automated car assembly. The plant will resume producing cars in early August. Truck assembly is being accelerated to the present capacity of 15,000 units a month. Story, other pictures on Page 72.

Conqueror or cannibal? It's Saturn question

By Michelle Krebs
Financial Editor

Eighty percent of Saturn Corp.'s business must represent new business to General Motors or it will not be considered a success, said Lloyd Reuss, executive vice president of GM's North American Passenger Car Groups.

"Saturn can't go in and cannibalize other GM products," Reuss said. "Eight out of every 10 Saturns we sell have to be sales we wouldn't have gotten had we not had Saturn."

Reuss said the basic design and powertrain of the Saturn car has been decided. Saturn will be a subcompact, representing GM's best effort to battle import competition.

Now, the GM division is establishing the timing for the product and the Spring Hill (Tenn.) plant where Saturn cars will be built. GM, so far, has not said when Saturn will be introduced. It is expected to be a 1989 or 1990 model.

Saturn Corp., a separate division formed by GM for the small-car project, also is in the process of determining the annual capacity of the plant, deciding how many models there will be and at what rate they will be introduced. Reuss said that initially there will be only one Saturn model, but GM is studying what models might be added to the Saturn line. That decision won't be made for another year or so, he said.

"We have to make sure that a Saturn franchise includes enough of a business opportunity to at-

15 pct. drop seen in Big 3 earnings

By Michelle Krebs
Financial Editor

First-quarter profits for the Big Three, which will be announced this week, are expected to be about 15 percent lower than last year's.

Profits are expected to total about $2.0 billion, according to estimates by auto analysts. That compares with nearly $2.4 billion last year, which was the Big 3's second-best first quarter.

Analysts say that General Motors earned about $948 million, which compares with $1.1 billion in the first quarter of 1985. GM's best first quarter was in 1984 when it earned $1.6 billion.

Analysts say GM continues to be adversely affected by high startup costs at new plants,

Ford Motor Co. is expected to report about $693 million in first-quarter profits, based on analysts' estimates. The company earned $783 million in the same quarter a year ago and enjoyed its best-ever first quarter in 1984 with a profit of $897 million.

Analysts say Ford is benefiting from strong production schedules and the successful Taurus/Sable launch.

Chrysler Corp. will report a profit of about $375 million for the first quarter, based on analysts' estimates. That compares with $508 million in the year-ago quarter and $706 in 1984, its best-ever first quarter.

For the full year, analysts expect Big Three earnings, individually and collectively, to be lower than in the past two years.

Nevertheless, there are mixed feelings as to how the rest of the year will shape up.

Some analysts say the auto industry could see a resurgence in sales as consumers feel the trickle-down effect of lower oil prices. Others see the domestic auto makers being stuck with high inventories and lower sales while incentive programs and production cuts will be used to offset the weak market.

Collectively, the Big Three will earn about $1 billion less than they did in 1985, according to the analysts. Collective profits will be about $7.1 billion, down about 12 percent from 1985's $8.1 billion.

Individually, GM is expected to earn about $3.4 billion, compared with 1985's $4.0 billion and 1984's $4.5 billion.

Ford will earn about $2.4 billion, off from 1985's $2.5 billion and 1984's $2.9 billion. Some analysts say Ford could be the only surprise among the Big Three. The company has a shot at matching last year's earnings, some say.

The earnings forecast for Chrysler is about $1.3 billion, down from 1985's $1.6 billion and 1984's $2.4 billion.

Customs Service lowering boom on gray-market fraud at Newark

By John A. Russell
New York Staff Writer

NEWARK, N.J.—U.S. Customs has impounded several hundred gray-market cars and is intensely investigating at least 60 cases involving gray-market cars brought through Port Newark.

Customs is concentrating on possible fraud. According to Arthur Stiffel, special agent in charge of the enforcement division of U.S. C[illegible]ms at this port, many of the cases involve fraudulent entry forms or paperwork required when the cars enter this country.

The biggest problem is with cars five years old or older. Owners of such cars can obtain a special one-time waiver of EPA and Department of Transportation requirements.

Stiffel said a "typical scam" is a so-called "dealer" bringing in 10 or 12 cars and using fictitious owner names as the individual importers. He said such cars often are misrepresented as having been brought into compliance with federal standards and are sold to unsuspecting consumers for higher prices. Actually, the cars that are five years old or older do not have to comply with federal requirements under the one-time waiver for individual owners.

The cases under investigation involve the older cars. They do not involve new cars brought in by licensed gray-market conversion companies.

Stiffel also said there have been several cases of stolen European cars appearing at the port. They were discovered because Customs

From cars to granola bars

By Roger Rowand
Engineering Editor

SCOTTSDALE, Ariz.—John Z. DeLorean has shifted gears and gone into the health center franchising and nutritional supplement field.

John Z. DeLorean

The 61-year-old former General Motors executive and auto maker is a principal in Hi-Tech Health and Wellness Centers, based here. He also is chairman of the executive committee.

That closely held company has just launched a campaign to franchise its centers and to form joint ventures to create centers. John R. Pyle, president, said investors will come chiefly from the medical profession.

DeLorean told Automotive News the company is fully financed and he has not invested any cash in it, but he is an unsalaried principal.

"I've believed in health and wellness all my life," DeLorean said. "I take good care of myself. That is probably why, in spite of all my stress, I've never had any problems. I'm 60 years old and I can run five miles right this minute." (Actually, DeLorean is 61. He was born Jan. 6, 1925.)

"Basically I lend my support," he continued. "Our plan is to build the company in size. As it builds, eventually it will be worth some money."

DeLorean also will benefit from networking sales of a nutritional supplement sold by four-month-old United Sciences of America (USA).

DeLorean is a distributor associate of USA and will benefit from sales downstream from his distributorship to other distributors and the public, Pyle said.

He said the clinics have been market tested in New York for a year before the current nationwide sales drive launch.

Attracted by newspaper advertising featuring DeLorean's name, about 500 prospective USA investors and distributors and curiosity seekers met at the Camelback Inn here last week. They were told they could get into businesses yielding as much as $1,000 a week with no financing other than purchases of supplements with their Visa and MasterCards.

Discussing artificial intelligence program for diagnostics

Ford issues warning to makers of robots

By Roger Rowand
Engineering Editor

CHICAGO—Ford Motor Co. is expected to tell the world's robot makers tomorrow (April 22) that they'd better develop artificial intelligence systems for diagnosing robot malfunctions. If not, they'll be told, Ford no longer will do business with them.

The company expects a favorable response and expects to see such computerized systems on the factory floor within two years.

It already has developed one system it is offering at no cost to robotics companies.

"We're anxious for them to develop their own systems for their own equipment," said Morgan M. Whitney, director of the Ford Robotics and Automation Consulting Center.

Ford's urging will come in a briefing by Whitney at the Chicago Hilton & Towers in connection with the Robots 10 Conference and Exposition, which is being held at the hotel and at McCormick Place.

The Ford development is based on a lung-disease diagnostic system pioneered at Stanford University and the Center for Disease Control in Atlanta, Whitney said.

It includes such examples of artificial intelligence as hunch-playing and the following of rules-of-thumb. In diagnosing, it operates on an if-then mode and has inferential abilities, Whitney said.

For example, it will tell a maintenance person about a problem by saying, "It may be here, but it could be there."

The expert system's base—the aritifical intelligence—can be modified and expanded as learning progresses, Ford said.

Ford's program uses the software shell of a Texas Instruments system called Personal Consultant. Ford demonstrated it last week at its robotics center in Dearborn using an IRB90 Asea robot. Whitney said the Ford diagnostic system can be used on other types of sophisticated automation equipment.

"We are telling people this is a feature we, as a major user, want," Whitney said. "We will encourage manufacturers to supply it as a built-in feature.

"This is not a panacea. There are some areas that need improvement. We're overdosing on high tech. We've been burned," Whitney said.

An example, he told Automotive News, was the conversion of the St. Louis plant to production of the Aerostar van. Showroom introduction of that vehicle was delayed for months last year as high-tech automated machinery was brought on line to replace previously standard non-automated equipment.

Ford, Iveco sign agreement linking European truck lines

By Richard Feast
European Editor

LONDON—Ford and Iveco signed their European truck merger agreement here last week.

The deal confirmed months of speculation about the talks, which stemmed directly from the proposal—subsequently abandoned—to merge the passenger-car operations of Ford of Europe and Fiat Auto.

Last week's agreement was signed by Giorgio Garuzzo, managing director of Fiat's Iveco commercial vehicle division, and Sam Toy, chairman and managing director of Ford of Britain.

A separate company known as Iveco Ford Truck, Ltd., is to be established July 1. Ford of Britain and Iveco will each hold 48 percent of the $60 million equity, with the remaining 4 percent owned by merchant bankers Credit Suisse First Boston, Ltd.

Garuzzo estimated annual revenues of up to $450 million for the new pairing.

The manufacture of Ford's Cargo range of trucks will continue at the plant in Langley, England, until the "early '90s," according to Toy. Employment at Langley (1,700 people) and at the Ford plants which supply components will be unaffected.

In the U.K., where Ford is already the market leader, the two dealer networks will merge to sell a combination of Cargo, heavy Ford Transit vans and complementary Iveco products. Ford's car dealers will continue to sell light Transits as well as car-derived vans.

Giorgio Garuzzo

Sam Toy

However, Ford will continue to sell Cargo in opposition to Iveco in the rest of Europe, where Iveco's presence is strong and Ford's is minimal. In overall sales terms, the new grouping will take Iveco Ford closer to market leader Daimler-Benz and farther away from third-place Renault Industrial Vehicles.

The creation of Iveco Ford will be of considerable concern to the U.K.'s other two major truck producers, BL's Leyland and General Motors' Bedford. While Leyland's market performance has improved in recent months, Bed-

Chrysler holding line on prices—for now

By John K. Teahen Jr.
Senior Editor

There was price news aplenty last week as Volkswagen posted an increase and General Motors disclosed model-by-model figures for its previously announced boost.

But the most interesting development came from Chrysler Corp., which declined to join GM's parade—at least for the moment.

And Ford Motor Co. maintained its uncomfortable position on the fence, debating whether to follow GM or Chrysler. There were reports that Ford was nearing a decision, but no definite word at presstime. A Ford incentive program that was to expire last Wednesday was extended through Sunday (April 20).

VW's hike, its third of the 1986 model year, averaged $310, or 3.2 percent.

GM held the line on a couple of models and bumped others as much as $862 (Cadillac Seville) and $1,039 (Cadillac limousines). There also were increases on optional equipment in the 2.9 percent advance, which Automotive News estimates as an average of $400 per car.

Chrysler said it "is not currently planning" to raise prices on domestic cars in answer to actions by GM and various imports.

The key word is "currently." Chrysler wouldn't disclose a time limit. Its present incentive programs continue until the end of April or longer, so Chrysler has a little time to wait and see.

Ford ending role in trucks

By Richard Feast
European Editor

LONDON—The merger between Ford's European truck operations and those of Fiat's Iveco can have only one interpretation: Ford is getting out of the European truck business.

News Analysis

What it had was an independent presence, albeit a weak one. What it has now is a merger with a much larger organization. The board of directors of the new company is tipped in Iveco's favor, and the ranking officer is from Iveco.

In recent years Ford has quietly withdrawn from a number of European truck markets. It has ceased production of the A-series and the heavyweight Transcontinental. It admits that the design and engineering staffs that created the Cargo and the new Transit have been diverted to passenger-car projects.

When the Cargo's production life ends in the early 1990s, it will almost certainly be replaced by a product designed and engineered by Iveco.

If the European truck market were a poker game, companies like Daimler-Benz, Scania, Volvo and Iveco would be holding mostly picture cards. Other companies like MAN and Daf would have a few as well, but Renault, Enasa, Leyland, Bedford and Ford would have poor hands. Each needs a lot of luck from the shuffle and generous financial

Pontiac hot despite cold Fiero

By Michelle Krebs
Financial Editor

PONTIAC—Pontiac remains on target for a 900,000-unit sales year, despite sagging sales of its once-hot Fiero, said J. Michael Losh, the division's general manager.

The 900,000 mark would represent a 12.5-percent sales increase over the 1985 model year. At this point in the model year, Pontiac sales are up 12 percent.

J. Michael Losh

"The 900,000 is an ambitious objective," Losh said, "but we've got a shot at it."

The target will be met without the once-strong leadership of Pontiac's Fiero. The two-seater has suffered a sales decline. Its inventory level has risen to a supply of 155 days as of April 1, compared with 36 days a year ago.

The inventory levels have been high enough to warrant temporary halts in production and layoffs at the Fiero plant. In addition, the Fiero is covered by GM's new 6.9-percent interest rate on 30-month car loans, which went into effect last week.

In an interview with Automotive News, Losh said the Fiero continues to do well compared with the original projections.

"This year, we won't sell quite as many as we did the first year of the vehicle, and we're obviously not going to sell quite as many as the full capacity of the plant," he said. "We're making some pro-

Toyota appoints U.S. plant chief

By Dave Zola
Detroit Reporter

Toyota Motor Corp. last week took a giant step toward getting its North American assembly operations off the ground by naming a top official to oversee its new car-building ventures in the U.S. and Canada.

K. Kusunoki

Kaneyoshi Kusunoki, a Toyota executive vice president with an extensive background in production engineering, was appointed president of the newly named Toyota Motor Mfg., U.S.A., Inc., and Toyota Motor Mfg., Canada, Inc.

The two firms will have the capacity to build up to 250,000 cars per year beginning in 1988.

The U.S. plant, to be built in Georgetown, Ky., will produce up to 200,000 cars annually in the 2-liter Camry class. The Canadian facility in Cambridge, Ont., will assemble up to 50,000 Corolla-size cars per year.

Employment at the $800 million Kentucky plant will total 3,000, while the $290 million Ontario operation will employ as many as 1,800. Each plant will include metal stamping, welding, painting and final assembly operations.

Groundbreaking for both sites is scheduled for May 6.

Kusunoki is the first major executive named to the U.S./Canada operations, and he is expected to be closely involved with the selection of the remainder of his management team.

Toyota officials said the company still hasn't decided whether Kusunoki will run the two firms from offices in North America or Japan.

Since 1982, Kusunoki has had responsibility for all of Toyota's overseas plant construction.

For the past 16 years, Kusunoki has been in charge of bringing all of Toyota's Japanese plants into production.

The Tax Man Cometh

Patrick O'Connor, NAFA's legislative adviser, says the IRS is giving fleets the big chill

By Geoff Sundstrom

As the National Assn. of Fleet Administrators Inc. (NAFA) convenes in Chicago this week, members are buzzing about a new kind of downsizing that has nothing to do with car length or weight.

The downsizing they are concerned about involves a declining number of fleet operations and the shrinking size of many vehicle fleets.

Closely observing the goings-on is Patrick C. O'Connor, NAFA's Washington representative, who claims fleet operations across the country are suffering the chilling effects of new and, at times, bewildering tax rules.

According to O'Connor, of Kent & O'Connor Inc., a corporate and government affairs firm with offices in Washington and Chicago, recent Congressional action on depreciation, vehicle recordkeeping and tax reform is causing fleet administrators to take a good hard look at their vehicle needs. In some cases this has led to abandoning entire fleet programs. In others it has prompted reductions in fleet size.

While NAFA membership has not suffered yet, O'Connor declares, "Over time the trend will be for fewer and smaller fleets."

The Internal Revenue Service (IRS) bears much of the responsibility for this trend, fleet operators believe.

The tax collection agency's well-publicized attempts to write and rewrite vehicle recordkeeping rules has been a nightmare for the nation's fleet managers. Indeed, many accountants continue to advise fleet operators that drivers should keep travel records on a daily basis rather than run the risk of being penalized because of inadequate documentation.

O'Connor (left) says recent Congressional action on depreciation, vehicle recordkeeping and tax reform is causing fleet administrators to take a good hard look at their vehicle needs. In some cases this has led to abandoning entire fleet programs.

O'Connor says that although Congress specifically forbade the IRS from requiring daily travel records, the agency has issued so many different and confusing rules on the subject that fleet managers are uncertain how best to keep their fleet programs in compliance with the law.

When Congress wants to revise the rules on depreciation, deductibility or documentation, fleet administrators are involved, and the 99th Congress has been a particularly worrisome session on these issues, O'Connor notes. Of major concern is how the Senate Finance Committee will write its tax reform package.

In working for tax overhaul with a favorable — or at least neutral — result for fleet administrators, NAFA has joined with a powerful coalition of automotive trade groups. NAFA membership in the Automotive Depreciation Coalition helps make Senate tax writers aware of fleet issues, O'Connor says.

Other coalition members include the Motor Vehicle Manufacturers Assn. of the U.S. (MVMA), National Automobile Dealers Assn. (NADA), American Car Rental Assn., and auto makers General Motors, Ford Motor Co. and Chrysler Corp.

Several potential trouble spots in the tax reform process seem to have been cleared away already. For example, O'Connor says NAFA is pleased that the White House has come out against an oil import fee. Such a tax would temporarily be offset by the falling price of gasoline, but would represent a new cost to fleet managers should oil prices stabilize and return to previous levels, O'Connor points out.

A proposal to end the deductibility of excise taxes — including the nine-cent-per-gallon tax on gasoline — also appears to have been put on hold. A majority of Finance Committee members have indicated they would not support curtailment of this important deduction.

Still unresolved is how the Finance Committee will deal with depreciation allowances for automobiles. O'Connor, whose group advocates a three-year schedule of depreciation, says three years of service is about average for most business vehicles. Because rapid mileage accumulation causes fleet vehicles to depreciate faster than private automobiles, he says, tax laws should reflect this.

While Congress has proved to be lukewarm about NADA's anti-fleet/lease incentive bill, NAFA members are continuing to fight the legislation at the state level. O'Connor notes that a well-organized dealer body in Iowa has pushed hard for an anti-fleet incentive law, and NADA seems to have made Iowa a "test case" for the legislation. "NADA has mounted an unusually strong effort in support of the bill," he says.

Although similar bills have recently failed to win passage in Michigan, Indiana and Oklahoma, O'Connor is concerned about the Iowa effort. As of mid-April the Iowa state legislature had not completed action on the bill.

NAFA members have their work cut out for them should NADA prove successful in the Midwest. O'Connor says 21 states have considered, or are now considering, limits on fleet incentives.

One thing that's certain, O'Connor points out, is that if auto dealers are not successful with their anti-fleet/lease incentive bill this year, they'll be back next year to try again. And NAFA will be right there doing battle, too. ■

Credit wins over options

Both U.S. and Canadian fleet managers prefer credit (discount off invoice) over free options as their fleet incentive choice, according to a survey conducted by *Runzheimer Reports on Transportation*.

Sixty percent of 388 U.S. respondents and 75 percent of 32 Canadian respondents said they would rather receive credit than free options.

Fleet managers stated two main reasons why they prefer credit over options. First, fleet policy or fleet-car specifications establish the allowable accessories. Declares one respondent: "Option content is set for selected classes of cars based on need or relative rank of assignee. Any deviation leads to individual jealousy."

The second most important reason fleet managers prefer credit is cost control. Many respondents consider up-front savings an important factor when making their new car choices. "Vehicle options are fixed on all cars. Dollar savings allow funds to be used elsewhere," explains one fleet manager. "Reduce cash outlay for our budget," states another.

Whereas a significant number of fleet managers select credit over options to avoid driver discontent, others see options as useful morale builders, according to the Runzheimer survey. "If we don't normally order these options, selecting them makes the drivers happy," a fleet manager notes.

Some respondents designated enhanced resale value as a second reason for selecting options rather than credit. For example, one respondent explains, "Free options let us dress up the vehicles and get a higher resale."

When cost considerations shape the fleet incentive decision, fleet managers tend to direct their attention either to the point of purchase or the point of disposal.

At the point of purchase, companies realize up-front savings by selecting credit, thereby improving corporate cash flow and reducing finance costs.

At the point of disposal, companies which have selected fleet-incentive options generally obtain more money from the used, upgraded unit.

The bottom line question raised by the Runzheimer survey: Which end of the unit's fleet cycle provides the greatest cost savings to the company? ■

Fleet exec salaries studied

Fleet executives who are titled administrator or director received the sharpest salary increases in 1985, while managers and vice presidents received more modest raises, according to a survey by *Runzheimer Reports on Transportation*.

Administrators, traditionally the lowest-paid fleet execs, received a 17-percent median salary increase, from $26,626 in 1984 to $31,618 in 1985. The median salary for a director with fleet responsibility rose 11 percent, from $42,251 to $47,000. Vice presidents and managers received raises of 3.9 and 3.7 percent, respectively.

The Runzheimer study notes: "In an age when titles place people in terms of importance, the fact that corporations more often assign those charged with fleet responsibility the title of manager rather than administrator suggests that the former title carries greater weight.

"Moreover, the fact that compensation proves generally higher for fleet managers than for fleet administrators argues that the title 'manager' carries more value than that of 'administrator'."

Overall, the survey, drawing responses from 482 fleet executives, shows median salaries for fleet executives rose by 5 percent, or $1,807.

Median Salary of Selected Fleet Executives by Corporate Rank

Rank	1984	1985	Percent Increase
Vice President ...	$52,084	$54,166	3.9%
Director	$42,251	$47,000	11.2%
Manager	$37,605	$39,000	3.7%
Administrator	$26,626	$31,618	17.0%

Although median salaries for fleet executives climbed, the percentage of fleet executives receiving company cars decreased. A 1984 survey showed 33 percent of responding companies provided employes with cars; only 25 percent did so in 1985.

One reason that partly explains this decline is the Tax Reform Act of 1984. Because of it, a number of companies are not only taking their fleet executives' cars away, they are also turning away from company-provided fleets. Some companies are eliminating the perk portion of their fleet.

Another reason for the decline is an ongoing corporate cost-reducing movement to cut back on the ranks that receive perk cars. ■

Electronic sensor detects levels of automotive fluids

TROY, Mich.—An electronic sensor to detect low levels of virtually all automotive fluids and alert the driver has been introduced by the Electrical Division of Wickes Mfg. Co.'s Automotive Group.

Applications include sensing low levels of engine oil, window-washer fluid, engine coolant, brake fluid, transmission oil and power-steering fluid.

The low-cost, self-contained sensor measures 2 inches by ½ inch by 1/16 inch.

Upon sensing low fluid levels at engine startup, the circuit latches, lighting an indicator lamp to alert the driver. The lamp remains on until the fluid level is corrected and the ignition is recycled.
